Metallothionein In Biology And Medicine:

Metallothionein in Biology and Medicine Curtis D. Klaassen, 1991-08-27 This book brings together work from leading researchers to present the most recent advances in research on metallothionein This protein interests toxicologists because it is thought that metallothionein protects against metal toxicity and possibly against oxidative stress It is of interest to pharmacologists because modification of metallothionein levels might have a role in cancer chemotherapy Nutritionists have an interest in this protein because it appears to be a major storage protein for zinc Biochemists and molecular biologists will be interested in the mechanisms of regulation of this protein because it is extremely inducible

James Kang, Jie Liu, 2006 **Metallothionein IV C.** Klaassen, 2012-12-06 The Proceedings of the Fourth International Metallothionein Meeting MT 97 feature the latest research on metallothionein The book covers a broad range of topics which provide important information for both basic and clinical investigators The selected 94 articles in this book are written by the leading scientists in the field around the world This is an increasingly important multi disciplinary area of study that has benefitted from recent advances in concepts and methodologies from other fields *Comprehensive Toxicology*, 2017-12-01 Comprehensive Toxicology Third Edition Fifteen Volume Set discusses chemical effects on biological systems with a focus on understanding the mechanisms by which chemicals induce adverse health effects Organized by organ system this comprehensive reference work addresses the toxicological effects of chemicals on the immune system the hematopoietic system cardiovascular system respiratory system hepatic toxicology renal toxicology gastrointestinal toxicology reproductive and endocrine toxicology neuro and behavioral toxicology developmental toxicology and carcinogenesis also including critical sections that cover the general principles of toxicology cellular and molecular toxicology biotransformation and toxicology testing and evaluation Each section is examined in state of the art chapters written by domain experts providing key information to support the investigations of researchers across the medical veterinary food environment and chemical research industries and national and international regulatory agencies Thoroughly revised and expanded to 15 volumes that include the latest advances in research and uniquely organized by organ system for ease of reference and diagnosis this new edition is an essential reference for researchers of toxicology Organized to cover both the fundamental principles of toxicology and unique aspects of major organ systems Thoroughly revised to include the latest advances in the toxicological effects of chemicals on the immune system Features additional coverage throughout and a new volume on toxicology of the hematopoietic system Presents in depth comprehensive coverage from an international author base of domain experts **Metallothioneins and Related Chelators** Astrid Sigel, Helmut Sigel, Roland K.O. resource for scientists working in a wide range of disciplines from environmental toxicology and inorganic biochemistry all the way through to physiology and medicine *Toxicology of Metals* Robert A. Goyer, M. George Cherian, 2012-12-06 The toxicology of metals has been concerned in the past with effects that produced clinical signs and symptoms However this view of metal toxicology has expanded in recent years due principally to two advances There has been a considerable increase in our knowledge of the biochemical effects of metals In addition biomarkers of toxicity can now be recognized that identify toxicity at levels of exposure that do not produce overt clinical effects Thus the toxicology of metals is now focused on nonclinical events that reflect adverse health effects This new awareness has produced the challenge of determining the lowest adverse level of exposure With increasing analytical sensitivity and methodologies to detect small changes at the molecular level the lowest level of exposure of some toxic metals like lead is very small Indeed for metals in which there is no biologic requirement it may be questioned whether there is a level of exposure that does not produce some degree of toxicity For essential metals the question is being asked as to the levels at which exposure exceeds biologic requirements and excess exposure becomes toxic The appropriateness of health decisions and the formation of public policy are dependent on the availability of current scientific information that addresses these questions The information in this volume is intended to be a resource for this purpose as well as a reference for students of toxicology and other health professionals **Molecular**

Mechanisms of Metal Toxicity and Carcinogenicity, 1994 **Toxicology of the Kidney** Jerry B. Hook, Robin S. Goldstein, 1993-06-30 This second edition provides a synthesis of recent research on the mechanisms of chemically induced kidney injury The text includes a review of current concepts of clinical nephrotoxicity and renal failure and mechanisms of specific classes of nephrotoxic drugs and environmental chemicals **National Library of Medicine Current Catalog**

National Library of Medicine (U.S.), 1982 Binding, Transport and Storage of Metal Ions in Biological Cells Wolfgang Maret, Anthony Wedd, 2014-07-09 Metal ions play key roles in biology Many are essential for catalysis for electron transfer and for the fixation sensing and metabolism of gases Others compete with those essential metal ions or have toxic or pharmacological effects This book is structured around the periodic table and focuses on the control of metal ions in cells It addresses the molecular aspects of binding transport and storage that ensure balanced levels of the essential elements Organisms have also developed mechanisms to deal with the non essential metal ions However through new uses and manufacturing processes organisms are increasingly exposed to changing levels of both essential and non essential ions in new chemical forms They may not have developed defenses against some of these forms such as nanoparticles Many diseases such as cancer diabetes and neurodegeneration are associated with metal ion imbalance There may be a deficiency of the essential metals overload of either essential or non essential metals or perturbation of the overall natural balance This book is the first to comprehensively survey the molecular nature of the overall natural balance of metal ions in nutrition toxicology and pharmacology It is written as an introduction to research for students and researchers in academia and industry and
