**The Problem with Software** Adam Barr,2018-10-23 An industry insider explains why there is so much bad software and why academia doesn't teach programmers what industry wants them to know Why is software so prone to bugs So vulnerable to viruses Why are software products so often delayed or even canceled Is software development really hard or are software developers just not that good at it In *The Problem with Software* Adam Barr examines the proliferation of bad software explains what causes it and offers some suggestions on how to improve the situation For one thing Barr points out academia doesn't teach programmers what they actually need to know to do their jobs how to work in a team to create code that works reliably and can be maintained by somebody other than the original authors As the size and complexity of commercial software have grown the gap between academic computer science and industry has widened It's an open secret that there is little engineering in software engineering which continues to rely not on codified scientific knowledge but on intuition and experience Barr who worked as a programmer for more than twenty years describes how the industry has evolved from the era of mainframes and Fortran to today's embrace of the cloud He explains bugs and why software has so many of them and why today's interconnected computers offer fertile ground for viruses and worms The difference between good and bad software can be a single line of code and Barr includes code to illustrate the consequences of seemingly inconsequential choices by programmers Looking to the future Barr writes that the best prospect for improving software engineering is the move to the cloud When software is a service and not a product companies will have more incentive to make it good rather than good enough to ship      From "black Art" to Industrial Discipline Nathan L. Ensmenger,2001      Refactored Sean Rogers,2021-05-17 Thirty nine years old laid off from a bookstore and working in the backroom of a grocery Sean Rogers thought the time was right to start his career as a software developer The only problem he knew nothing about technology Just the opposite he held on to CD players and flip phones long past the point of prudence Enter Tech Elevator an in person coding boot camp boasting a 92% job placement Welcome to 14 weeks of intensive education larger than life characters and a bumbling yet inspiring attempt at becoming a programmer As more people than ever begin looking for new careers interest
