Handbook of Meta-analysis in Ecology and Evolution Julia Koricheva, Jessica Gurevitch, Kerrie Mengersen, 2013-04-21 Meta analysis is a powerful statistical methodology for synthesizing research evidence across independent studies This is the first comprehensive handbook of meta analysis written specifically for ecologists and evolutionary biologists and it provides an invaluable introduction for beginners as well as an up to date guide for experienced meta analysts The chapters written by renowned experts walk readers through every step of meta analysis from problem formulation to the presentation of the results The handbook identifies both the advantages of using meta analysis for research synthesis and the potential pitfalls and limitations of meta analysis including when it should not be used Different approaches to carrying out a meta analysis are described and include moment and least square maximum likelihood and Bayesian approaches all illustrated using worked examples based on real biological datasets This

one of a kind resource is uniquely tailored to the biological sciences and will provide an invaluable text for practitioners from graduate students and senior scientists to policymakers in conservation and environmental management Walks you through every step of carrying out a meta analysis in ecology and evolutionary biology from problem formulation to result presentation Brings together experts from a broad range of fields Shows how to avoid minimize or resolve pitfalls such as missing data publication bias varying data quality nonindependence of observations and phylogenetic dependencies among species Helps you choose the right software Draws on numerous examples based on real biological datasets

Psychodynamic Psychotherapy Research Raymond A. Levy, J. Stuart Ablon, Horst Kächele, 2011-12-27 Psychodynamic Psychotherapy Research Evidence Based Practice and Practice Based Evidence continues the important work of the first book published in 2009 by Humana Press Handbook of Evidence Based Psychodynamic Psychotherapy Bridging the Gap Between Science and Practice This landmark title presents in one volume significant developments in research including neuroscience research in psychodynamic psychotherapy by a team of renowned clinician researchers The demand for ongoing research initiatives in psychodynamic psychotherapy from both internal and external sources has increased markedly in recent years and this volume continues to demonstrate the efficacy and effectiveness of a psychodynamic approach to psychotherapeutic interventions in the treatment of psychological problems The work in this volume is presented in the spirit of ongoing discussion between researchers and clinicians about the value of specific approaches to specific patients with specific psychiatric and psychological problems Multiple forms of treatment interventions have been developed over the past fifty years and this volume makes clear with firm evidence the authors support for the current emphasis on personalized medicine Groundbreaking and a major contribution to the psychiatric and psychologic literature Psychodynamic Psychotherapy Research Evidence Based Practice and Practice Based Evidence provides firm grounding for advancing psychodynamic psychotherapy as a treatment paradigm **Methods of Meta-Analysis** John E Hunter, Frank L.

Schmidt, 2004-04-19 Covering the most important developments in meta analysis from 1990 to 2004 this text presents new patterns in research findings as well as updated information on existing topics MetaWin 2.0 (User's Manual) Michael S. Rosenberg, Dean C. Adams, Jessica Gurevitch, 1999-12-01 MetaWin first published in 1997 allows the user to easily carry out all common meta analysis calculations on multiple independent studies from a wide variety of disciplines including medicine ecology and the social sciences Version 2 0 allows users to calculate any of six different effect sizes vs two as in Version 1 0 from their data and includes its own spreadsheet editor and statistical calculator The analysis routine is greatly expanded and graphics e g funnel plots histograms etc have been added *The Microbial Regulation of Global Biogeochemical Cycles* Johannes Rousk, Per Bengtson, 2014-10-17 Global biogeochemical cycles of carbon and nutrients are increasingly affected by human activities So far modeling has been central for our understanding of how this will affect ecosystem functioning and the biogeochemical cycling of carbon and nutrients These models have been forced to adopt a reductive approach built on

the flow of carbon and nutrients between pools that are difficult or even impossible to verify with empirical evidence Furthermore while some of these models include the response in physiology ecology and biogeography of primary producers to environmental change the microbial part of the ecosystem is generally poorly represented or lacking altogether The principal pool of carbon and nutrients in soil is the organic matter The turnover of this reservoir is governed by microorganisms that act as catalytic converters of environmental conditions into biogeochemical cycling of carbon and nutrients The dependency of this conversion activity on individual environmental conditions such as pH moisture and temperature has been frequently studied On the contrary only rarely have the microorganisms involved in carrying out the processes been identified and one of the biggest challenges for advancing our understanding of biogeochemical processes is to identify the microorganisms carrying out a specific set of metabolic processes and how they partition their carbon and nutrient use We also need to identify the factors governing these activities and if they result in feedback mechanisms that alter the growth activity and interaction between primary producers and microorganisms By determining how different groups of microorganisms respond to individual environmental conditions by allocating carbon and nutrients to production of biomass CO₂ and other products a mechanistic as well as quantitative understanding of formation and decomposition of organic matter and the production and consumption of greenhouse gases can be achieved In this Research Topic supported by the Swedish research councils programme Biodiversity and Ecosystem Services in a Changing Landscape BECC we intend to promote this alternative framework to address how cycling of carbon and nutrients will be altered in a changing environment from the first principle mechanisms that drive them namely the ecology physiology and biogeography of microorganisms and on up to emerging global biogeochemical patterns This novel and unconventional approach has the potential to generate fresh insights that can open up new horizons and stimulate rapid conceptual development in our basic understanding of the regulating factors for global biogeochemical cycles The vision for the research topic is to facilitate such progress by bringing together leading scientists as proponents of several disciplines By bridging Microbial Ecology and Biogeochemistry connecting microbial activities at the micro scale to carbon fluxes at the ecosystem scale and linking above and belowground ecosystem functioning we can leap forward from the current understanding of the global biogeochemical cycles Academy of Management Journal Academy of Management, 2003 Focus on management theory and practice

Fox, Simoneta Negrete-Yankelevich, Vinicio J. Sosa, 2015 The application and interpretation of statistics are central to ecological study and practice Ecologists are now asking more sophisticated questions than in the past These new questions together with the continued growth of computing power and the availability of new software have created a new generation of statistical techniques These have resulted in major recent developments in both our understanding and practice of ecological statistics This novel book synthesizes a number of these changes addressing key approaches and issues that tend to be overlooked in other books such as missing censored data correlation structure of data heterogeneous data and complex causal relationships These issues characterize a large proportion of ecological data but most ecologists training in traditional statistics simply does not provide them with adequate preparation to handle the associated challenges Uniquely Ecological Statistics highlights the underlying links among many statistical approaches that attempt to tackle these issues In particular it gives readers an introduction to approaches to inference likelihoods generalized linear mixed models spatially or phylogenetically structured data and data synthesis with a strong emphasis on conceptual understanding and subsequent application to data analysis Written by a team of practicing ecologists mathematical explanations have been kept to the minimum necessary This user friendly textbook will be suitable for graduate students researchers and practitioners in the fields of ecology evolution environmental studies and
