Global Warming - Myth or Reality? Marcel Leroux,2006-08-30 In the global warming debate definitive answers to questions about ultimate causes and effects remain elusive In *Global Warming Myth or Reality* Marcel Leroux seeks to separate fact from fiction in this critical debate from a climatological perspective Beginning with a review of the dire hypotheses for climate trends the author describes the history of the 1998 Intergovernmental Panel on Climate Change IPCC and many subsequent conferences He discusses the main conclusions of the three IPCC reports and the predicted impact on global temperatures rainfall weather and climate while highlighting the mounting confusion and sensationalism of reports in the media After taking a hard look at the reality of the greenhouse effect the evidence from climate models and the models limitations Leroux postulates alternate causes of climate change and analyzes the trends for global temperatures rainfall patterns and sea level He poses the heretical question if warming may be considered a benefit in some regions Finally Leroux suggests a number of priorities for climatologists to better understand processes of climate change to integrate them into climate models and to predict accurately future changes in climate This timely and controversial book lays out the scientific case of the sizable skeptical scientific community who challenge the accepted wisdom **Abstracts of the Papers Printed**
