Methodologies Of Pattern Recognition:

Methodologies of Pattern Recognition Satoshi Watanabe, 2014-05-12 Methodologies of Pattern Recognition is a collection of papers that deals with the two approaches to pattern recognition geometrical and structural the Robbins Monro procedures and the implications of interactive graphic computers for pattern recognition methodology Some papers describe non supervised learning in statistical pattern recognition parallel computation in pattern recognition and statistical analysis as a tool to make patterns emerge from data One paper points out the importance of cluster processing in visual perception in which proximate points of similar brightness values form clusters At higher levels of mental activity humans are efficient in clumping complex items into clusters Another paper suggests a recognition method which combines versatility and an efficient noise proofness in dealing with the two main problems in the field of recognition These difficulties are the presence of a large variety of observed signals and the presence of interference One paper reports on a possible feature selection for pattern recognition systems employing the minimization of population entropy Electronic engineers physicists physiologists psychologists logicians mathematicians and philosophers will find great rewards in reading the above collection
