Methodology and Epistemology for Social Sciences Donald T. Campbell, 1988-10-27 Selections from the work of an influential contributor to the methodology of the social sciences He treats measurement experimental design epistemology and sociology of science each section introduced by the editor Samuel Overman Annotation copyright Book News Inc Portland Or Epistemology & Methodology III: Philosophy of Science and Technology Part I: Formal and Physical Sciences Mario BUNGE, 1985-07-31 The aims of this Introduction are to characterize the philosophy of science and technology henceforth PS T to locate it on the map of learning and to propose criteria for evaluating work in this field 1 THE CHASM BETWEEN S T AND THE HUMANITIES It has become commonplace to note that contemporary culture is split into two unrelated fields science and the rest to deplore this split and to do is some truth in the two cultures thesis and even nothing about it There greater truth in the statement that there are literally thousands of fields of knowledge each of them cultivated by specialists who are in most cases indifferent to what happens in the other fields But it is equally true that all fields of knowledge are united though in some cases by weak links forming the system of human knowledge Because of these links what advances remains stagnant or declines is the entire system of S T Throughout this book we shall distinguish the main fields of scientific and technological knowledge while at the same time noting the links that unite them **Epistemology, Methodology, and the Social Sciences** Robert S. Cohen, Marx W. Wartofsky, 2013-03-09 The last decades have seen major reformations in the philosophy and history of science What has been called post positivist philosophy of science has introduced radically new concerns with historical social and valuative components of scientific thought in the natural sciences and has raised up the demons of relativism subjectivism and sociologism to haunt the once calm precincts of objectivity and realism Though these disturbances intruded upon what had seemed to be the logically well ordered domain of the philosophy of the natural sciences they were no news to the social sciences There the messy business of human action volition decision the considerations of practical purposes and social values the role of ideology and the problem of rationality had long conspired to defeat logical reconstructionist programs The attempt to tarne the social sciences to the harness of a strict hypothetico deductive model of explanation failed Within the social sciences phenomenological Marxist hermeneuticist action theoretical approaches vied in attempting to capture the distinctiveness of human phenomena In fact the philosophy of the natural sciences even in its hard forms has itself become infected with the increasing reflection upon the role of such social scientific categories in the attempt to understand the nature of the scientific enterprise Epistemology & Methodology I: Mario BUNGE, 1983-08-31 In this Introduction we shall state the business of both descriptive and normative epistemology and shall locate them in the map of learning This must be done because epistemology has been pronounced

Epistemology, Methodology, and Philosophy of Science Wilhelm K. Essler,H. Putnam,W. Stegmuller,2013-01-12

The Oxford Handbook of Philosophical Methodology Herman Cappelen,Tamar Gendler,John P. Hawthorne,2016 This is the most comprehensive book ever published on philosophical methodology A team of thirty eight of the world s leading philosophers present original essays on various aspects of how philosophy should be and is done The first part is devoted to broad traditions and approaches to philosophical methodology including logical empiricism phenomenology and ordinary language philosophy The entries in the second part address topics in philosophical methodology such as intuitions conceptual analysis and transcendental arguments The third part of the book is devoted to essays about the interconnections between philosophy and neighbouring fields including those of mathematics psychology literature and film and neuroscience

EPSA Epistemology and Methodology of Science Mauricio Suárez,Mauro Dorato,Miklós Rédei,2010-01-14 These volumes collect a selection of papers presented at the Founding Conference of the European Philosophy of Science Association meeting in Madrid The volumes provide an excellent overview of the state of the art in philosophy of science as practised nowadays in different European countries **Methodological Variance** G.L. Pandit,2012-12-06 For a philosopher with an abiding interest in the nature of objective knowledge systems in science what could be more important than trying to think in terms of those very subjects of such knowledge to which men like Galileo Newton Max Planck Einstein and others devoted their entire lifetimes In certain respects these systems and their structures may not be beyond the grasp of a linguistic conception of science and scientific change which men of science and philosophy have advocated in various forms in recent times But certainly it is wrong headed to think that one s conception of science can be based on an identification of its theories with languages in which they may be my own alternatively framed There may be more than one place in book 1983 87 where they may seem to get confused with each other quite against my original intentions The distinction between the objective knowledge systems in science and the dynamic frameworks of the languages of the special individual sciences

in which their growth can be embedded in significant ways assumes here therefore much importance. It must be recognized that the problems concerning scientific change which these systems undergo are not just problems concerning language change.

Readings in Methodology Jean-Bernard Ouedraogo, Carlos Cardoso, 2011-12-15 One of the weaknesses of research in Africa is the little consideration that is given to questions of epistemology and methodology. What we see is the trivialization of research protocols which consequently are reduced to fantasy prescriptions that detach social studies from universal debates over the validity of science rather than an interrogation of research procedures induced by the complexity of social dynamics. As a result, social sciences have become an imitative discourse and a recital of exotic anecdotes without perspectives. Knowledge production therefore loses any heuristic bearing. It is on the basis of this reality that attempts to correct this tendency have been made in this book by discussing the methodological foundation of social science knowledge. This volume is a collection of papers presented during methodological workshops organized by CODESRIA. Its objective is to revitalize theory and methodology in field work in Africa while contributing to the creation of a critical space hinged upon the mastery of epistemological bases which are indispensable to any scientific imagination. Far from being a collection of technical certainties and certified methods, this book interrogates the uncertain itinerary of the process of social logics discovery. In that sense, it is a decisive step towards a critical systemization of ongoing theories and practices within the African scientific community. The reader can therefore identify the philosophical, historical, sociological, and anthropological foundations of object construction, field data exploitation, and research results delivery. This book explains the importance of the philosophical and social modalities of scientific practice, the influence of local historical contexts, the different usages of new investigative tools including the audiovisual tools. Finally, the book, backed by classical theories, serves as an invitation toward considering scientific commitment to African field research from a reflective perspective.

Epistemology & Methodology I: M. Bunge, 2012-12-06 In this Introduction, we shall state the business of both descriptive and normative epistemology and shall locate them in the map of learning. This must be done because epistemology has been pronounced dead and methodology nonexistent and because when acknowledged at all, they are often misplaced.

- 1 DESCRIPTIVE EPISTEMOLOGY

The following problems are typical of classical epistemology:

- i What can we know
- ii How do we know
- iii What if anything does the subject contribute to his knowledge
- iv What is truth
- v How can we recognize truth
- vi What is probable knowledge as opposed to certain knowledge
- vii Is there a priori knowledge and if so, of what
- viii How are knowledge and action related
- ix How are knowledge and language related
- x What is the status of concepts and propositions

In some guise or other, all of these problems are still with us. To be sure, if construed as a demand for an inventory of knowledge, the first problem is not a philosophical one any more than the question 'What is there.' But it is a genuine philosophical problem if construed thus: What kinds of object are knowable and which ones are not? However, it is doubtful that philosophy can offer a correct answer to this problem without the help of science and technology. For example, only these disciplines can tell us

whether man can know not only phenomena appearances but also noumena things in themselves or self existing objects

Intuition and the Axiomatic Method Emily Carson, Renate Huber, 2006-01-24 Following developments in modern geometry logic and physics many scientists and philosophers in the modern era considered Kant's theory of intuition to be obsolete But this only represents one side of the story concerning Kant intuition and twentieth century science Several prominent mathematicians and physicists were convinced that the formal tools of modern logic set theory and the axiomatic method are not sufficient for providing mathematics and physics with satisfactory foundations All of Hilbert G del Poincar Weyl and Bohr thought that intuition was an indispensable element in describing the foundations of science They had very different reasons for thinking this and they had very different accounts of what they called intuition But they had in common that their views of mathematics and physics were significantly influenced by their readings of Kant In the present volume various views of intuition and the axiomatic method are explored beginning with Kant's own approach By way of these investigations we hope to understand better the rationale behind Kant's theory of intuition as well as to grasp many facets of the relations between theories of intuition and the axiomatic method dealing with both their strengths and limitations in short the volume covers logical and non logical historical and systematic issues in both mathematics and physics

Structuring the Self Majid Davoody Beni, 2019-10-10 This book presents a unified account of the self based on a network of knowledge sourced from several scientific accounts of selfhood Beni constructs his ontological account of the self from the common structure that underpins the theoretical diversity that is manifested in rival and sometimes incompatible scientific accounts of the self and its aspects The enterprise is inspired by recent structural realist theories in the philosophy of science specifying the basic structure of the self and explaining how representational phenomenal and social aspects of the self are embodied within this structure

Causality, Method, and Modality G.G. Brittan, 2012-12-06 Deservedly so Jules Vuillemin is widely respected and greatly admired It is not simply that he has produced a large body of outstanding work in many different areas of philosophy Or that he combines to an unusual degree rigorous standards with a very wide perspective Or even that in his path breaking accounts of algebra of escartes of Kant and of Russell he showed in new and profound ways how the histories of science and philosophy could be used to illuminate each other It is also that he has pursued the application of formal techniques and the defense of liberal institutions with a rare singlemindedness and courage In a time and place where the former were generally ignored and the latter often attacked he carried on at some personal cost embodying a traditional and ideal conception of the philosophical life bridging national differences Those who know him also treasure his friendship Always curious he delights in new facts and new experiences and continually heightens the perception of those around him Almost yearly at the College de France he introduced brand new courses always with fresh and fruitful insights Exceptionally solicitous he follows the lives of the families around him in great detail The devotion of his students is legend His personal energy is also legend Many of us have followed him bounding up the stairs two at a time or through the gardens of the Luxembourg his wit and irony apace

Philosophical issues in psychiatry III Kenneth S.

Kendler, Josef Parnas, 2014-10-02 Psychiatry has long struggled with the nature of its diagnoses. The problems raised by questions about the nature of psychiatric illness are particularly fascinating because they sit at the intersection of philosophy, empirical psychiatric psychological research, measurement theory, historical tradition, and policy. In being the only medical specialty that diagnoses and treats mental illness, psychiatry has been subject to major changes in the last 150 years. This book explores the forces that have shaped these changes and especially how substantial internal advances in our knowledge of the nature and causes of psychiatric illness have interacted with a plethora of external forces that have impacted on the psychiatric profession. It includes contributions from philosophers of science with an interest in psychiatry, psychiatrists, and psychologists with expertise in the history of their field and historians of psychiatry. Each chapter is accompanied by an introduction and a commentary. The result is a dynamic discussion about the nature of psychiatric disorders and a book that is compelling reading for those in the field of mental health, history of science and medicine, and philosophy.
