Methods for Affinity-Based Separations of Enzymes and Proteins Munishwar N. Gupta, 2013-12-01 One major concern of biotechnology is either using enzymes or producing them Enzyme protein production is therefore an important starting point for biotechnology Bioseparation or Downstream Processing constitutes about 40 90% of the total production cost Driven by economics highly selective technologies applicable to large scale processing have emerged during the last decade These technologies are slowly diffusing to enzymologists who are working on a smaller scale looking for fast and efficient purification protocols The affinity based techniques including precipitation two phase extractions expanded bed chromatography perfusion chromatography and monoliths described in this volume provide current and new cutting edge methods Consequently the book is of main interest to researchers in biochemistry biochemical engineering and biotechnology working either in academic or industrial sectors

Techniques in Molecular Systematics and Evolution

Rob DeSalle, Gonzalo Giribet, Ward Wheeler, 2002-04-01 The amount of information that can be obtained by using molecular techniques in evolution systematics and ecology has increased exponentially over the last ten years The need for more rapid and efficient methods of data acquisition and analysis is growing accordingly This manual presents some of the most important techniques for data acquisition developed over the last years The choice and justification of data analysis techniques is also an important and critical aspect of modern phylogenetic and evolutionary analysis and so a considerable part of this volume addresses this important subject The book is mainly written for students and researchers from evolutionary biology in search for methods to acquire data but also from molecular biology who might be looking for information on how data are analyzed in an evolutionary context To aid the user information on web located sites is included wherever possible Approaches that will push the amount of information which systematics will gather in the Functional
