Understanding Natural Language Understanding Erik Cambria, 2024-10-22 About half a century ago AI pioneers like Marvin Minsky embarked on the ambitious project of emulating how the human mind encodes and decodes meaning While today we have a better understanding of the brain thanks to neuroscience we are still far from unlocking the secrets of the mind especially when it comes to language the prime example of human intelligence Understanding natural language understanding i e understanding how the mind encodes and decodes meaning through language is a significant milestone in our journey towards creating machines that genuinely comprehend human language Large language models LLMs such as GPT 4 have astounded us with their ability to generate coherent contextually relevant text seemingly bridging the gap between human and machine communication Yet despite their impressive capabilities these models operate on statistical patterns rather than true comprehension This textbook delves into the nuanced differences between these two paradigms and explores the future of AI as we strive to achieve true natural language understanding NLU LLMs excel at identifying and replicating patterns within vast datasets producing responses that appear intelligent and meaningful They can generate text that mimics human writing styles provide summaries of complex documents and even engage in extended dialogues with users However their limitations become evident when they encounter tasks that require deeper understanding reasoning and contextual knowledge An NLU system that deconstructs meaning leveraging linguistics and semiotics on top of statistical analysis represents a more profound level of language comprehension It involves understanding context in a manner similar to human cognition discerning subtle meanings implications and nuances that current LLMs might miss or misinterpret NLU grasps the semantics behind words and sentences comprehending synonyms metaphors idioms and abstract concepts with precision This textbook explores the current state of LLMs their capabilities and limitations and contrasts them with the aspirational goals of NLU The author delves into the technical foundations required for achieving true NLU including advanced knowledge representation hybrid AI systems and neurosymbolic integration while also examining the ethical implications and societal impacts of developing AI systems that genuinely understand human language Containing exercises a final assignment and a comprehensive quiz the textbook is meant as a reference for courses on information retrieval AI NLP data analytics data mining and more Understanding Natural Language Terry Winograd, 1972 Overview of the language understanding program Comparison with previous programs A grammar for english An introduction to lisp A description of program grammar Deduction problem solving and planner The blocks world Semantics Refernces Appendices

Integration of World Knowledge for Natural Language

Understanding Ekaterina Ovchinnikova, 2012-02-15 This book concerns non linguistic knowledge required to perform computational natural language understanding NLU The main objective of the book is to show that inference based NLU has the potential for practical large scale applications First an introduction to research areas relevant for NLU is given We review approaches to linguistic meaning explore knowledge resources describe semantic parsers and compare two main forms of inference deduction and abduction In the main part of the book we propose an integrative knowledge base combining lexical semantic ontological and distributional knowledge A particular attention is paid to ensuring its consistency We then design a reasoning procedure able to make use of the large scale knowledge base We experiment both with a deduction based NLU system and with an abductive reasoner For evaluation we use three different NLU tasks recognizing textual entailment semantic role labeling and interpretation of noun dependencies

Additionally knowledge is essential in achieving higher levels of intelligence that cannot be attained through statistical learning of input text patterns alone In this book we will review recent developments in the field of natural language processing specifically focusing on the role of knowledge in language representation We will examine how pre trained language models like GPT 4 and ChatGPT are limited in their ability to capture external world knowledge and explore various approaches to incorporate knowledge into language models Additionally we will discuss the significance of knowledge in enabling higher levels of intelligence that go beyond statistical learning on input text patterns Overall this survey aims to provide insights into the importance of knowledge in natural language processing and highlight recent advances in this field

Pragmatics and Natural Language Understanding Georgia M. Green, 2012-11-12 This book differs from other introductions to pragmatics in approaching the problems of interpreting language use in terms of interpersonal modelling of beliefs and intentions It is intended to make issues involved in language understanding such as speech text and discourse accessible to the widest group possible not just specialists in linguistics or communication theorists but all scholars and researchers whose enterprises depend on having a useful model of how communicative agents understand utterances and expect their own utterances to be understood Based on feedback from readers over the past seven years explanations in every chapter have been improved and updated in this thoroughly revised version of the original text published in 1989 The most extensive revisions concern the relevance of technical notions of mutual and normal belief and the futility of using the notion null context to describe meaning In addition the discussion of implicature now includes an extended explication of Grice's Cooperative Principle which attempts to put it in the context of his theory of meaning and rationality and to preclude misinterpretations which it has suffered over the past 20 years The revised chapter exploits the notion of normal belief to improve the account of conversational implicature Shape Understanding System Zbigniew Les, Magdalena

Les, 2015-02-06 This is the third book presenting selected results of research on the further development of the shape understanding system SUS carried out by authors in the newly founded Queen Jadwiga Research Institute of Understanding In this book the new term Machine Understanding is introduced referring to a new area of research aiming to investigate the possibility of building machines with the ability to understand It is presented that SUS needs to some extent mimic human understanding and for this reason machines are evaluated according to the rules applied for the evaluation of human understanding The book shows how to formulate problems and how it can be tested if the machine is able to solve these problems
