North American Species Of Pennisetum:

The North American Species of Pennisetum Agnes Chase, Albert Spear Hitchcock, Charles Vancouver Piper, Emery Clarence Leonard, Paul Carpenter Standley, Sidney Fay Blake, 1920 **Tropical North American Species of Panicum** Albert Spear Hitchcock, 1915 **The North American Species of Pennisetum** Agnes Chase, 1921 **The North American Species of Paspalum** Agnes Chase, 1929 **The North American Species of Panicum** Albert Spear Hitchcock, Mrs. Agnes Chase, 1910 New Plants from Guatemala and Honduras Sidney Fay Blake, 1931 **Flora of North America: Volume 25: Magnoliophyta: Commelinidae (in part): Poaceae, part 2** Flora of North America Editorial Committee, Mary E. Barkworth, Kathleen M. Capels, Sandy Long, Michael B. Piep, 2003

Volume 25 of Flora North America is one of two volumes on grasses to be published in this series. Together they will provide a comprehensive authoritative illustrated account of this important group of plants. Most of the species treated are either native to North America north of Mexico or are introduced species that are now established in the region, but there are many that do not fit into these categories. Among the additional species are several that the USDA has identified as major weed threats and others that are known only as cultivated plants, some being cultivated for their ornamental value, others as sources for human food or animal forage. For instance, volume 25 includes such ecologically important species as Big and Little Bluestem, economically important species of Sorghum and Corn, ornamental species such as Job's Tears and Hakonechloa, and noxious weeds such as Itchgrass. The volume includes identification keys, descriptions, line drawings, and ecological characteristics for each of the species, distribution maps for the native and established species, and a list of the synonyms currently in use for the accepted names. The treatments, each of which has been extensively reviewed, are based on a combination of original observations and critical review of the literature.

Contributions from the United States National Herbarium United States National Herbarium, United States National Museum, 1927 **Manual of Grasses for North America** Mary E. Barkworth, Laurel K. Anderton, Kathleen M. Capels, Sandy Long, Michael B. Piep, 2007-09-15

Grasses are the world's most important plants. They are the dominant species over large parts of the earth's land surface, a fact that is reflected in the many different words that exist for grasslands: words such as prairie, veldt, palouse, and pampas, to mention just a few. As a group, grasses are of major ecological importance as soil binders and providers of shelter and food for wild animals, both large and small. Some grasses, such as wheat, rice, corn, barley, rye, tef, and sugar cane, are major sources of calories for humans and their livestock; others, primarily bamboos, are used for construction, tools, paper, and fabric. More recently, the seed catalogs that tantalize gardeners each winter have borne witness to an increasing appreciation of the aesthetic value of grasses. The *Manual of Grasses for North America* is designed as a successor to the classic volume by Hitchcock and Chase. It reflects current taxonomic thought and includes keys, illustrations, and distribution maps for the nearly 900 native and 400 introduced species that have been found in North America north of Mexico. In addition, it presents keys and illustrations for several species that are known only

in cultivation or are of major agricultural significance either as progenitors of bread wheat and corn or as a major threat to North American agriculture because of their ability to hybridize with crop species The Manual of Grasses for North America is a major reference work for grasses that will retain its value for many years **Contributions from the United States National Herbarium**, 1927 Toxic Plants of North America George E.
