### **North Sea Oil And Gas Reservoirs Iii:**

North Sea Oil and Gas Reservoirs—II A.T. Buller, 2012-12-06 The first North Sea Oil and Gas Reservoirs Conference was held in Trondheim in 1985 as part of the Norwegian Institute of Technology's 75th anniversary celebrations. Favourable reactions from the delegates prompted the Committee to re-run the event some three and a half years later and it is now intended that the Conference be held on a regular basis as long as there is a demand for this type of gathering. The objectives of the 1989 Conference which were broadly similar to those of the previous one were a) to bring together those engaged in various geoscientific and reservoir engineering aspects of North Sea Oil and gas reservoirs in one forum b) to demonstrate wherever possible the interdependence of the various disciplines and specializations c) to promote innovative synergistic approaches to research and development programmes aimed at North Sea conditions and d) to reflect current trends in the reservoir sciences. Naturally there was no place for specialist parallel sessions in a Conference aimed at encouraging interdisciplinary integration and awareness. **North Sea Oil and Gas Reservoirs — III** J.O.

Aasen, 1994-01-31 Oil and gas have been produced from North Sea reservoirs for over two decades. The economic and technological challenges posed by the North Sea have necessitated a continuing development of refined geological and reservoir technical methods for reservoir evaluation and management. This book, which is the third in a series, brings together the specialists involved in this development in an attempt to summarize current knowledge of North Sea reservoirs and the techniques used to analyse their geological and fluid dynamic properties. Particular emphasis is placed on the interdependence of the disciplines involved in reservoir development and on synergistic approaches to reservoir research. Topics covered in this volume include detailed reviews of North Sea reservoirs, improved seismic methods for reservoir description, geological reservoir heterogeneity with special emphasis on fault modelling, fluid rock interactions and the near well environment, geostatistical methods and reservoir simulation. **United Kingdom Oil and Gas Fields** G. Goffey, J.G. Gluyas, 2020-12-03 Geological Society Memoir 52 records the extraordinary 50 year journey that has led to the development of some 458 oil and gas fields on the UKCS. It contains papers on almost 150 onshore and offshore fields in all of the UK's main petroliferous basins. These papers range from look-backs on some of the first developed gas fields in the Southern North Sea to papers on fields that have only just been brought into production or may still remain undeveloped and includes two candidate CO<sub>2</sub> sequestration projects. These papers are intended to provide a consistent summary of the exploration, appraisal, development and production history of each field leading to the current subsurface understanding which is described in greater detail. As such the Memoir will be an enduring reference source for those exploring for, developing, producing hydrocarbons and sequestering CO<sub>2</sub> on the UKCS in the coming decades. It encapsulates the petroleum industry's deep subsurface knowledge accrued over more than 50 years of exploration and production. *Geology of Gas and Oil under the Netherlands* H.E. Rondeel, D.A.J. Batjes, W.H.

Nieuwenhuijs,2012-12-06 Contains 21 papers on the petroleum geology of the Netherlands combining work by the industry the Geological Survey and universities The wide range of topics presented includes reservoir characterization through 3D seismic and borehole log evaluation of single oil and gas fields as well as reviews of the hydrocarbon habitat in the West Netherlands Basin and of the regional Rotliegend facies distribution Published in association with the Royal Geological and Mining Society of the Netherlands KNGMG which hosted the 1993 International Conference in the Hague of the American Association of Petroleum Geologists The papers were prepared for this conference Audience Staff engaged in hydrocarbon exploration and production in the North Sea area Others who need to know about the results of this exploration and production in the Netherlands

**The Geological Modelling of Hydrocarbon Reservoirs and Outcrop Analogues** Ian D. Bryant,Stephen S. Flint,2009-04-08 The Geological Modelling of Hydrocarbon Reservoirs and Outcrop Analogues is a collection of 15 selected papers taken from the Symposium of the same name which formed part of the IAS Congress of 1990 held in Nottingham UK Recent technological advances and the ever increasing demand for maximising recovery from existing oil and gas fields has led to an upsurge of interest at both academic and industrial levels in reservoir characterization and quantitative modelling of physical rock properties in 3 D inter well space Synthesizing both industrial and academic research and integrating sedimentology petroleum geology geostatistic and geomathematics this volme is a state of the art presentation of approaches to quantifying geology in order to give better input to 3 D numerical reservoir modelling methods It is the first IAS volume to highlight the necessary interface with academic and oil industry geology by showing how academic research can significantly support the mathematical modelling work of reservoir engineers in industry and contributions to the volume come from an expert international team comprised of university government and international oil industry scientists

**Petroleum Exploration and Exploitation in Norway** Norsk petroleumsförening. Conference,1995 This conference was arranged by the Norwegian Petroleum Society in order to commemorate the first 25 years of exploration on the Norwegian Continental Shelf Sixty papers and posters were presented of which 25 have been

selected for this volume Since the start of exploration activities during the mid 1960 s the North Sea has not only proved to be one of the main petroleum provinces in the world but has also established itself as an excellent laboratory for geoscientific research and application This development has been stimulated greatly by the openness towards exchange of technical data encouragement by the Norwegian authorities The objective of this book is to assess the results of 25 years of exploration in Norway It focuses on lessons learned from past experiences as well as considering future challenges facing geoscientists in the industry relating to both exploration and exploitation activities Included are papers which assess the status and future trends of exploration in the main geological provinces on the Norwegian Continental Shelf from the Central Graben in the south to Svalbard and the Russian Arctic in the north
