North Sea Perspectives On Regional Environmental Cooperation:

The North Sea David Freestone, Ton Ijlst, 1991 The North Sea one of the most intensively used sea areas in the world may well be one of the most intensively regulated sea areas as well As human activity developed in the North Sea national and later international regulations followed these developments The result has been what is commonly called a piecemeal approach The legal regime of the North Sea has developed in an incremental manner Thus one conventional instrument after the other covering different user functions like vessel source pollution fisheries ocean dumping and land based pollution was adopted In contrast to more modern approaches these legal instruments have their own framework The result is that the instruments are scattered in many different documents and even for the more well informed North Sea watcher it is difficult to obtain a comprehensive overview of the regulatory instruments The North Sea Basic Legal Documents on Regional Environmental Cooperation offers a comprehensive view of the instruments dealing with all sources of marine pollution in the North Sea be they ocean dumping land based pollution or vessel source pollution The book contains many legal documents including maps and tables It also contains non conventional instruments such as the texts of the declarations of the International North Sea Conferences held between 1984 and 1990 and recommendations and decisions of e g the Paris Commission on Land Based Pollution and the Oslo Commission on Dumping Furthermore the book contains documentation on relatively new areas of environmental concern in the North Sea region i e nature conservation and management of living resources The book supplements The North Sea Perspectives on Regional Environmental Cooperation also edited by David Freestone and Ton Ijlst which contains 26 essays on legal and policy aspects of environmental protection in the North Sea

North Sea Cooperation Jon Birger Skjærseth, 2000-09-09 This is the first book to examine the link between international and national environmental institutions It examines this link in depth by analyzing the making and implementation of North Sea pollution commitments The author develops two models generating different propositions aimed at distinguishing the significance of institutions from other explanatory factors The key to understanding the success of international institutions in the North Sea cooperation lies in the balancing of hard legally binding and soft politically acting institutions in the same issue area He goes on to show the extent to which different national institutions in Norway the Netherlands and the UK are suited to implement the North Sea commitments

The European Community and Marine Environmental Protection in the International Law of the Sea Veronica Frank, 2007-09-30 The European Community and its member states have shared competences in marine environmental matters As a consequence they have jointly acceded to the United Nations Convention on the Law of the Sea LOSC and most marine related international agreements which have been concluded in form of mixed agreements This book looks at the manner in which the Community implements its international obligations in the specific fields of the prevention of oil pollution from ships the regulation of ocean dumping and the protection of marine habitats through the establishment of Marine Protected Areas MPAs especially looking at the

division of competence with the member states and the conformity of the Community's regulatory action with the jurisdictional framework established by the LOSC. By examining the subject from both a law of the sea and EC law perspectives, the book offers a comprehensive and interesting picture of the action taken by the Community to preserve the European marine environment.

Contemporary Issues in the Law of Treaties Malgosia Fitzmaurice, M. Fitzmaurice, O. A. Elias, Olufemi Elias, 2005. This book is a collection of essays dealing with issues of contemporary significance in the law of treaties. It neither purports nor aspires to provide a general overview of all aspects of the law of treaties and it is by no means intended to be a comprehensive textbook. The discussion of the subjects selected in this book will shed some light on a number of areas of the contemporary law of treaties and consequently on some important features of the international legal system at the beginning of the twenty-first century. The relevance of the rules governing the law of treaties for other central fields of international law continue to be the subject of frequent doctrinal discussion. In addition, some rapidly developing newer areas of public international law which are regulated for the most part by treaties have renewed the importance of some older problems, for example, the question of conflicts between treaties regulating the same subject matter and the matter of treaty interpretation. One other important issue is the relevance of the emergence of new actors and factors other than states in the international legal order in general and in the law of treaties in particular.

Cooperation in the Law of Transboundary Water Resources Christina Leb, 2013-07-25. Climate change, population growth and the increasing demand for water are all capable of leading to disputes over transboundary water systems. Dealing with these challenges will require the enhancing of adaptive capacity, the improving of the quality of water resources management and a reduction in the risk of conflict between riparian states. Such changes can only be brought about through significant international cooperation. Christina Leb's analysis of the duty to cooperate and the related rights and obligations highlights the interlinkages between this duty and the principles of equitable and reasonable utilisation and the prevention of transboundary harm. In doing so, she considers the law applicable to both international watercourses and transboundary aquifers and explores the complementarities and interaction between the rules of international water law and the related obligations of climate change and human rights law.

Maritime Regime Building Mark J. Valencia, 2021-10-18. The past few decades have witnessed the emergence of a vast array of regional arrangements and institutions dealing with all aspects of ocean management. The level of cooperation ranges from minimal dispute avoidance to relatively comprehensive ocean governance at the regional level. As concrete examples, reasonably successful and comprehensive regional regimes have been created for the Baltic, the North and the Mediterranean Seas and the South Pacific. And attempts at regional regime building are ongoing in Southeast Asia, the South China Sea and the Indian Ocean. Although there are broad similarities between the semi-enclosed seas of Western Europe and Northeast Asia, no regional maritime regime has yet been initiated in Northeast Asia. The papers in this volume are authored by leading authorities on not only the maritime affairs of their particular region of focus but on maritime policy.

in general They describe and explain existing or incipient regional maritime regimes in an unusually broad comparative context and extract lessons learned that may be applicable elsewhere including Northeast Asia The case studies are neatly sandwiched between an introduction to concepts and principles on regional co operation and concluding chapters on lessons learned and their applicability to Northeast Asia Moreover the papers raise and address several questions of relevance to policy For example what factors are conducive to maritime regime initiation expansion and positive evolution and which constrain regime formation and evolution Why has maritime regime building been successful in Europe and largely unsuccessful in Asia And which if any lessons learned in the European context are applicable in Asia Given the growing interest in regime formation and effectiveness in general and maritime regimes in particular this book will be of considerable interest to both analysts and policymakers International Law and Ocean Use Management Lawrence Juda,2013-02-01

This book places contemporary problems of ocean use management in historical context beginning with the time of Hugo Grotius whose seminal 1609 work *The Freedom of the Seas* was the basis of ocean law for the next three centuries Individual use problems are dealt with in detail and include overfishing migrating fish stocks and fish wars oil drilling deep sea mining and marine pollution Throughout the author notes the need to seek solutions in ocean management from a more integrated perspective Emphasis is placed on the United Nations Conference on the Law of the Sea and the resulting agreements This book therefore presents a unique breadth of view which will make it salient to policy makers diplomats scholars and ocean users Principles of International Environmental Law I Philippe Sands,1995 This post UNCED account of the frameworks

standards and implementation of the international environmental law is intended for undergraduates and academics in the fields of international law politics geography economics and environmental studies It can be used on its own as a reference or course text or in conjunction with its companion collections of documents **The North Sea** David A.C. agreements provide a practical basis for countries to address environmental issues on a global scale This book explores the workings and outcomes of these agreements and analyses key questions of why some problems are dealt with successfully and others ignored By examining fundamental policies and issues in environmental protection this text gives an easily comprehensible introduction to international environmental agreements and discusses problems in three areas air water and on land It traces the history of agreements in broad thematic areas related to long distance air pollution ozone depleting and greenhouse gases ocean management biological diversity agricultural plant diversity and forest stewardship Drawing on experts in their respective fields this book provides an insightful evaluation of the successes and failures and analysis of the reasons for this Concluding with an insightful examination of research to show how performance of agreements can be improved in the future this volume is a vital contribution to our understanding of the politics associated with establishing international environmental consensus International Environmental Agreements will be of interest to scholars students and researchers in global environmental politics international relations and political science Steinar Andresen is Senior Research Fellow at the Fridtjof Nansen Institute Norway and formerly professor at the Dept of Political Science University of Oslo Elin Lerum Boasson is Research Fellow at the Fridtjof Nansen Institute Norway Geir H nneland is Research Director at the Fridtjof Nansen Institute and adjunct professor at the University of Troms International Law & Trade Perspective ,1994

Chemical Marine Monitoring Philippe Quevauviller,Patrick Roose,Gert Verreet,2011-08-24 Wide scale chemical monitoring programmes are required by international conventions and European Union policies such as the Water Framework Directive 2000 60 EC and the new EU Marine Strategy Framework Directive MSFD This entails all waters including transitional and coastal waters sediments and biota The final volume in the Water Quality Measurement Serieshighlights policy frameworks and analytical trends with an emphasis on laboratory methods and quality control Within this comprehensive text the following sections are included Setting the Scene monitoring of pollutants Policy Settings international conventions and EU marine strategy Marine monitored parameters trace elements chemical species organic micropollutants and nutrients Types of monitoring classical chemical monitoring biomonitoring and in situ methods Quality assurance certified reference materials for marine monitoring Research and developments the role of sediments in coastal monitoring and passive sampling technologies Chemical Marine Monitoring Policy Framework and Analytical Trends is intended for postgraduates and researchers working in analytical chemistry and its application to environmental and health analyses Those interested in developing new methods and materials in relation to drinking water regulations will also find this book beneficial *The Precautionary Principle and International Law:The Challenge of Implementation* David Freestone,Ellen Hey,1996-01-01 Papers presented at the meetings facilitated by the Sanders Institute at the Faculty of Law of the Erasmus University Rotterdam and the Law School of the University of Hull **International Law and the Environment** Tuomas Kuokkanen,2002-01-01 This work contributes to the study of international environmental law

addressing its development over three time periods the traditional period the modern era and the post modern period It challenges the reader to think about the subject and its development within a broader framework **The Concept of Treaty in International Law** Jan Klabbers, 2023-09-25 Whether or not a certain norm is legally binding upon international actors may often depend on whether or not the instrument which contains the norm is to be regarded as a treaty In this study the author argues that instruments which contain commitments are ex hypothesi treaties In doing so he challenges popular notions proclaiming the existence of morally and politically binding agreements and so called soft law Such notions Klabbers argues are internally inconsistent and founded upon untenable presumptions Moreover they find little support in the pertinent decisions of municipal and international courts and tribunals The book addresses issues of importance not only for academics working in international law constitutional law and political science but also for practitioners involved in the making implementation and enforcement of international agreements
