The World as We Know It Peter Dear,2025-10-21 From the award winning author of *Revolutionizing the Sciences* a monumental historical account of how we came to see the world through the lens of science Science is the basis of our assumptions about ourselves and our world from ideas about our evolutionary past to our conceptions of the vast expanses of space and the smallest particles of matter In this panoramic book acclaimed historian of science Peter Dear uncovers the roots of such beliefs revealing how they constitute a natural philosophy that has been developed and refined over the course of centuries and how the world as we have come to know it was by no means inevitable In a sweeping multifaceted narrative Dear describes some of the most breathtaking accomplishments in the advance of human knowledge such as Isaac Newton's laws of motion and gravitation Carl Linnaeus's taxonomy Antoine Lavoisier's new chemistry Charles Darwin's theory of evolution and Albert Einstein's theories of relativity Challenging the notion that science is only about making discoveries he shows how our world has been formed by people institutions and cultural assumptions giving rise to disciplines ranging from biology and astrophysics to electromagnetism and the social sciences Taking readers from the early eighteenth century to today *The World as We Know It* reveals how our ideas about our place in the universe were bequeathed to us by individuals cultures and a curiosity that knows no bounds **Chasing Hubble's Shadows** Jeff Kanipe,2025-09-23 *Chasing Hubble's Shadows* is an account of the continuing efforts of astronomers to probe the outermost limits of the observable universe The book derives its title from something the great American astronomer Edwin Hubble once wrote Eventually we reach the dim

boundary the utmost limits of our telescopes There we measure shadows and we search among ghostly errors of measurement for landmarks that are scarcely more substantial The quest for Hubble's shadows those unimaginably distant wispy traces of stars and galaxies that formed within the first few hundred million years after the Big Bang takes us back in effect to the beginning of time as we are able to perceive it when the first discrete stellar objects appeared out of what has lately come to be known as the cosmic dark age The information that is being gleaned from these dim sources chiefly with the aid of Hubble's namesake the Hubble Space Telescope promises to yield clues to many cosmic puzzles including the nature of the mysterious dark energy that is now believed to pervade all of space

The Moon and the Western Imagination Scott L. Montgomery, 2022-03-29 The Moon is at once a face with a thousand expressions and the archetypal planet Throughout history it has been gazed upon by people of every culture in every walk of life From early perceptions of the Moon as an abode of divine forces humanity has in turn accepted the mathematized Moon of the Greeks the naturalistic lunar portrait of Jan van Eyck and the telescopic view of Galileo Scott Montgomery has produced a richly detailed analysis of how the Moon has been visualized in Western culture through the ages revealing the faces it has presented to philosophers writers artists and scientists for nearly three millennia To do this he has drawn on a wide array of sources that illustrate mankind's changing concept of the nature and significance of heavenly bodies from classical antiquity to the dawn of modern science Montgomery especially focuses on the seventeenth century when the Moon was first mapped and its features named From literary explorations such as Francis Godwin's *Man in the Moone* and Cyrano de Bergerac's *L'autre monde* to Michael Van Langren's textual lunar map and Giambattista Riccioli's *Almagestum novum* he shows how Renaissance man was moved by the lunar orb how he battled to claim its surface and how he in turn elevated the Moon to a new level in human awareness The effect on human imagination has been cumulative our idea of the Moon and therefore the planets is multilayered and complex having been enriched by associations played out in increasingly complicated harmonies over time We have shifted the way we think about the lunar face from a perfect body to an earthlike one with corresponding changes in verbal and visual expression Ultimately Montgomery suggests our concept of the Moon has never wandered too far from the world we know best the Earth itself And when we finally establish lunar bases and take up some form of

residence on the Moon's surface we will not be conquering a New World fresh and mostly unknown but a much older one ripe with history

Hirshfeld, 2002-05-01 In the dramatic tradition of the best selling Longitude Parallax charts the historical path of observational astronomy s most daunting challenge measuring the distance to a star The greatest scientific minds applied themselves in vain to the problem across the millennia beginning with the ancient Greeks Not until the nineteenth century would three astronomers armed with the best telescopes of the age race to conquer this astronomical Everest their contest ending in a virtual dead heat Against a sweeping backdrop filled with kidnappings dramatic rescue swordplay madness and bitter rivalry Alan Hirshfeld brings to life the heroes of this remarkable story Meet the destitute boy plucked from a collapsed building who becomes the greatest telescope maker the world has ever seen the hot tempered Dane whose nose is lopped off in a duel over mathematics the merchant s apprentice forced to choose between the lure of money and his passion for astronomy and the musician who astounds the world by discovering a new planet from his own backyard Generously

Solar System Maps Nick Kanas,2013-09-25 In recent years there has been increased interest in our Solar System This has been prompted by the launching of giant orbiting telescopes and space probes the discovery of new planetary moons and heavenly bodies that orbit the Sun and the demotion of Pluto as a planet In one generation our place in the heavens has been challenged but this is not unusual Throughout history there have been a number of such world views Initially Earth was seen as the center of the universe and surrounded by orbiting planets and stars Then the Sun became the center of the cosmos Finally there was no center just a vast array of galaxies with individual stars some with their own retinue of planets This allowed our Solar System to be differentiated from deep sky objects but it didn't lose its mystery as more and more remarkable bodies were discovered within its boundaries This book tells the exciting story of how we have conceptualized and mapped our Solar System from antiquity to modern times In addition to the complete text this story is made more vivid by 162 Solar System and planetary maps diagrams and images over a third in color direct quotes and figures from antiquarian contemporary and Space Age documents and photographs that allow the reader to track how humans have viewed the Solar System from original sources nine tables that compare the various world views relative planetary positions and components of the Solar System with each other Broad in scope and rich in imagery this book will draw the reader into the story of our Solar System and how it has been mapped since the beginning of recorded time

Science and Religion Around the World John Hedley Brooke,Ronald L. Numbers,2011-01-11 The past quarter century has seen an explosion of interest in the history of science and religion But all too often the scholars writing it have focused their attention almost exclusively on the Christian experience with only passing reference to other traditions of both science and faith At a time when religious ignorance and misunderstanding have lethal consequences such provincialism must be avoided and in this pioneering effort to explore the historical relations of what we now call science and religion the authors go beyond the Abrahamic traditions to examine the way nature has been understood and manipulated in regions as diverse as ancient China India and sub Saharan Africa Science and Religion around the World also provides authoritative discussions of science in Judaism Christianity and Islam as well as an exploration of the relationship between science and the loss of religious beliefs The narratives included in this book demonstrate the value of plural perspectives and of the importance of location for the construction and perception of

science religion relations **Nicolaus Copernicus** Owen Gingerich, James MacLachlan, 2005-06-16 Born in Poland in 1473 Nicolaus Copernicus launched a quiet revolution No scientist so radically transformed our understanding of our place in the universe as this curious bishop s doctor and church official In his quest to discover a beautiful and coherent system to describe the motions of the planets Copernicus placed the sun in the center of the system and made the earth a planet traveling around the sun Today it is hard to imagine our solar system any other way but for his time Copernicus s idea was earthshaking In 1616 the church banned his book *Revolutions* because it contradicted the accepted notion that God placed Earth in the center of the universe Even though those who knew of his work considered his idea dangerous *Revolutions* remained of interest only to other scientists for many years It took almost two hundred years for his concept of a sun centered system to reach the general public None the less what Copernicus set out in his remarkable text truly revolutionized science For this Copernicus a quiet doctor who made a tremendous leap of imagination is considered the father of the Scientific Revolution Oxford Portraits in Science is an on going series of scientific biographies for young adults Written by top scholars and writers each biography examines the personality of its subject as well as the thought process leading to his or her discoveries These illustrated biographies combine accessible technical information with compelling personal stories to portray the scientists whose work has shaped our understanding of the natural world **The Scientific 100** John Simmons, Lynda Simmons, 2000-09-01 Who are the great scientists throughout the ages and what exactly did they do to earn their importance From Archimedes to Newton to Einstein to Hawking *The Scientific 100* provides the fascinating answers Vivid biographical sketches chronicle the lives and accomplishments of the world s preeminent scientists And in the tradition of the Citadel Press 100 Series they are ranked provocatively in order of influence an inspiration for lively discussion This unique volume is a browser s treasure trove and a handy reference for the general reader John Simmons has been associated with *Current Biography* for more than fifteen years He has written frequently about Nobel laureates in science A member of the New York Academy of Sciences he divides his time between New York City and Paris **Science and Sensibility** Keith J. Laidler, 2011-12-30 This volume reviews the major contributions of the different branches of science and shows how they all lead to a unified conception of humans place in the universe
