On the Nature of Marx's Things Jacques Lezra, 2018-03-27 On the Nature of Marx's Things is a major rethinking of the Marxian tradition one based not on fixed things but on the inextricable interrelation between the material world and our language for it Lezra traces to Marx's earliest writings a subterranean Lucretian practice that he calls necrophilological translation that continues to haunt Marx's inheritors This Lucretian strain requiring that we think materiality in non self evident ways as dynamic aleatory and always marked by its relation to language raises central questions about ontology political economy and reading Lezra writes Vittorio Morfino in his preface transfers all of the power of the Althusserian encounter into his conception of translation Lezra's expansive understanding of translation covers practices that put different natural and national languages into relation often across periods but also practices or mechanisms internal to each language Obscured by later critical attention to the contradictory lexicons of fetishism and of chrematistics that Capital uses to describe how value accrues to commodities and by the dialectical approach that's framed Marx's work since Engels sought to marry it to the natural philosophy of his time necrophilological translation has a troubling definitive influence in Marx's thought and in his wake It entails a radical revision of what counts as translation and wholly new ways of imagining what an object is of what counts as matter value sovereignty mediation and even number In On the Nature of Marx's Things a materialism of the encounter as recent criticism in the vein of the late Althusser calls it encounters Marxological value form theory post Schmittian divisible sovereignty object oriented ontologies and the critique of correlationism and philosophies of translation and untranslatability in debt to Quine Cassin and Derrida The inheritors of the problems with which Marx grapples range from Spinoza's marranismo through Melville's Bartleby through the development of a previously unexplored Freudian political theology shaped by the revolutionary traditions of Schiller and Verdi through Adorno's exilic antihumanism against Said's cosmopolitan humanism

through today's new materialisms Ultimately necrophilology draws the story of capital's capture of difference away from the story of capital's production of subjectivity It affords concepts and procedures for dismantling the system of objects on which neoliberal capitalism stands concrete this wordly things like commodities but also such objects as debt traps austerity programs the marketization of risk ideologies the pedagogical professional legal even familial institutions that produce and reproduce inequities today

Freud and the Scene of Trauma John Fletcher, 2013-12-02 This book will reward scholars across a number of disciplines literary studies trauma studies psychoanalysis and psychology and philosophy Choice This book argues that Freud's mapping of trauma as a scene is central to both his clinical interpretation of his patients symptoms and his construction of successive theoretical models and concepts to explain the power of such scenes in his patients lives This attention to the scenic form of trauma and its power in determining symptoms leads to Freud's break from the neurological model of trauma he inherited from Charcot It also helps to explain the affinity that Freud and many since him have felt between psychoanalysis and literature and artistic production more generally and the privileged role of literature at certain turning points in the development of his thought It is Freud's scenography of trauma and fantasy that speaks to the student of literature and painting

Scientists and the Sea, 1650-1900 Margaret Deacon, 2018-04-17 Scientists and the Sea is a history of how the scientific study of the sea has developed over a period of nearly 2500 years Beginning with the speculations of Greek philosophers it carries the story forward showing how curiosity about the ocean appeared in many different forms and locations before in the late 19th century the first deep sea researches heralded the foundation of the science known today as oceanography Originally published in 1971 this book has never been superseded as the most comprehensive and wide ranging treatment of the emergence of marine science within the western scientific tradition After three introductory chapters dealing with knowledge up to the Renaissance the main part of the work shows how pioneers of scientific observation at sea during the 17th and 18th centuries made notable discoveries but that it was not until the middle of the 19th century when aided by the advance of technology scientists were able to undertake the first explorations of the ocean depths This second edition contains a new introduction and bibliography
