Anatomy, Phylogeny and Palaeobiology of Early Archosaurs and Their Kin Sterling J. Nesbitt, Julia Brenda Desojo, Randall B. Irmis, 2013 Archosaurs an important reptile group that includes today's crocodiles and birds arose during the Triassic in the aftermath of the greatest mass extinction of all time In the last 20 years our understanding of the early evolution of the group has improved substantially with the discovery of new fossils and species of early archosaurs and their closest relatives a better understanding of the relationships of these animals and new insights into their palaeobiology In order to synthesize these new data researchers of early archosaurs from around the world met at the first symposium of early archosaur evolution at the IV Congreso Latinoamericano de Paleontología de Vertebrados September 2011 in San Juan Argentina This symposium facilitated collaboration and strove to paint a better understanding of these extraordinary animals The resultant body of work is a state of the art examination of early archosaur groups and their close relatives including historical anatomical biogeographical evolutionary and palaeobiological data This contribution furthers our knowledge of the anatomy relationships and palaeobiology of species level taxa as well as more global patterns of archosaur evolution during the Triassic P 4 of cover **Vertebrate Paleontology in New Mexico** Spencer G. **Eocene Biodiversity** Gregg F. Gunnell, 2012-12-06

Initially this work was designed to document and study the diversification of modern mammalian groups and was quite successful and satisfying However as field and laboratory work continued there began to develop a suspicion that not all of the Eocene story was being told It became apparent that most fossil samples especially those from the American West were derived from similar preservational circumstances and similar depositional settings A program was initiated to look for other potential sources of fossil samples either from non traditional lithologies or from geographic areas that were not typically sampled As this program of research grew it began to demonstrate that different lithologies and different geographic areas told different stories from those that had been developed based on more typical faunal assemblages This book is conceived as an introduction to non traditional Eocene fossils samples and as a place to document and discuss features of these fossil assemblages that are rare or that come from rarely represented habitats
