Paleozoic Salt Bearing Formations of the World M.A. Zharkov, 1984-06 The original Russian edition of the monograph Paleozoic salt formations of the world was published by Nedra Moscow in 1974 The description of salt basins was given as of 1970 1971 and based on the literature available at that time Additional evidence was presented in History of Paleozoic salt accumulation Nauka Novosibirsk 1978 with a brief account of new basins of Paleozoic salt accumulation These two books complement each other and have one common list of references the former providing the material which in the latter is the basis for the major trends in the history of evaporite sedimentation in the Paleozoic History of Paleozoic salt accumulation was the first of the two books to be published in English Springer Berlin Heidelberg New York 1981 The present book is the first synthesis dealing with specific Paleozoic salt formations and some salt basins However since the first edition was published 10 years ago new data since then allow more accurate and detailed description of composition structure and distribution patterns of salt deposits within Paleozoic evaporite basins New basins have also been found in some regions of the Earth The author has attempted to give more complete characterization of Paleozoic salt basins using the data available as of 1981

Sedimentary Basins and Petroleum Geology of the Middle East A.E.M. Nairn, A.S. Alsharhan, 1997-12-11 The wealth of petroleum has made the Middle East one of the most actively explored regions of the world The volume of geological geophysical and geochemical data collected by the petroleum industry in recent decades is enormous The Middle East may be a unique region in the world where the volume of subsurface data and information exceeds that based on surface outcrop This book reviews the tectonic and geological history of the Middle East and the regional hydrocarbon potential on a country by country basis in the context of current ideas developed through seismic and sequence stratigraphy and incorporating the ideas of global sea level change Subsurface data have been used as much as possible to amplify the descriptions The paleogeographic approach provides a means to view the area as a whole While the country by country approach inevitably leads to some repetition it enhances the value of the volume as a teaching tool and underlines some of the changing lithologies within formations carrying the same name Reading the Archive of Earth's Oxygenation Victor Melezhik, Anthony R. Prave, Eero J. Hanski, Anthony E. Fallick, Aivo Lepland, Lee R. Kump, Harald Strauss, 2012-09-26 Earth's present day environments are the outcome of a 4.5 billion year period of evolution reflecting the interaction of global scale geological and biological processes Punctuating that evolution were several extraordinary events and episodes that perturbed the entire Earth system and led to the creation of new environmental conditions sometimes even to fundamental changes in how planet Earth operated Volume 3 Global Events and the Fennoscandian Arctic Russia Drilling Earth Project represents another kind of illustrated journey through the early Palaeoproterozoic provided by syntheses reviews and summaries of the current state of our understanding of a series of global events that resulted in a fundamental change of the Earth System from an anoxic to an oxic state The book discusses traces of life possible causes for the Huronian age

glaciations addresses radical changes in carbon sulphur and phosphorus cycles during the Palaeoproterozoic and provides a comprehensive description and a rich photo documentation of the early Palaeoproterozoic supergiant petrified oil field Terrestrial environments are characterised through a critical review of available data on weathered and calichified surfaces and travertine deposits Potential implementation of Ca Mg Sr Fe Mo U and Re Os isotope systems for deciphering Palaeoproterozoic seawater chemistry and a change in the redox state of water and sedimentary columns are discussed The volume considers in detail the definition of the oxic atmosphere possible causes for the oxygen rise and considers the oxidation of terrestrial environment not as a single event but a slow motion process lasting over hundreds of millions of years Finally the book provides a roadmap as to how the FAR DEEP cores may facilitate future interesting science and provide a new foundation for education in earth science community Welcome to the illustrative journey through one of the most exciting periods of planet Earth

Sedimentary Processes, Environments and Basins Gary Nichols, Edward Williams, Chris Paola, 2009-03-05 For several decades Peter Friend has been one of the leading figures in sedimentary geology and throughout that time he has helped scores of other people by supervising doctoral students collaborating with colleagues especially in developing countries and selflessly sharing ideas with fellow geologists This collection of papers is a survey of the research frontier in basin dynamics a field Peter Friend helped initiate and a token of thanks from people who have benefited from an association with Peter during their careers The papers in this book fall into four themes Tectonics and sedimentation Landscape evolution and provenance Depositional systems and Fluvial sedimentation which reflect Peter's research interests and are all important areas of current research in sedimentary geology There are both case studies and review articles on these themes which reflect recent work but the collection can also be considered to be a sampler of sedimentary geology for anyone with broad interests in the Earth sciences
