Pandoras Poison Chlorine Health And A New Environmental Strategy:

Pandora's Poison Joe Thornton, 2000 The dangers of organochlorides and a proposed solution Environmental Health Perspectives ,1993

Chemicals without Harm Ken Geiser, 2015-06-19 A proposal for a new chemicals strategy that we work to develop safer alternatives to hazardous chemicals rather than focusing exclusively on controlling them Today there are thousands of synthetic chemicals used to make our clothing cosmetics household products electronic devices even our children s toys Many of these chemicals help us live longer and more comfortable lives but some of these highly useful chemicals are also persistent toxic and dangerous to our health and the environment For fifty years the conventional approach to hazardous chemicals has focused on regulation barriers and protection In Chemicals without Harm Ken Geiser proposes a different strategy based on developing and adopting safer alternatives to hazardous chemicals rather than focusing exclusively on controlling them Geiser reviews past government policies focused on controlling chemicals describes government initiatives outside the United States that have begun to implement a more sustainable chemical policy and offers an overview of the chemicals industry and market He develops a safer chemicals policy framework that includes processes for characterizing classifying and prioritizing chemicals generating and using new chemical information and promoting transitions to safer chemicals The shift in strategy described by Geiser will require broad changes in science the chemicals economy and government policy Geiser shows that it is already beginning identifying an emerging movement of scientists corporate managers environmental activists and government leaders who are fashioning a new twenty first century approach to chemicals

Toxic Exposures Phil Brown, 2007-06-29 The increase in environmentally induced diseases and the loosening of regulation and safety measures have inspired a massive challenge to established ways of looking at health and the environment Communities with disease clusters women facing a growing breast cancer incidence rate and people of color concerned about the asthma epidemic have become critical of biomedical models that emphasize the role of genetic makeup and individual lifestyle practices Likewise scientists have lost patience with their colleagues and government s failure to adequately address environmental health issues and to safeguard research from corporate manipulation Focusing specifically on breast cancer asthma and Gulf War related health conditions contested illnesses that have generated intense debate in the medical and political communities Phil Brown shows how these concerns have launched an environmental health movement that has revolutionized scientific thinking and policy Before the last three decades of widespread activism regarding toxic exposures people had little opportunity to get information Few sympathetic professionals were available the scientific knowledge base was weak government agencies were largely unprepared laypeople were not considered bearers of useful knowledge and ordinary people lacked their own resources for discovery and action Brown argues that organized social movements are crucial in recognizing and acting to combat environmental diseases His book draws on environmental and medical sociology environmental justice environmental health science and social movement studies to show how citizen

science alliances have fought to overturn dominant epidemiological paradigms His probing look at the ways scientific findings are made available to the public and the changing nature of policy offers a new perspective on health and the environment and the relationship among people knowledge power and authority **Smoke on the Water** Dario Fazzi, 2023-10-31 The U S government military and industry once saw ocean incineration as the safest and most efficient way to dispose of hazardous chemical waste Beginning in the late 1960s toxic chemicals such as PCBs and other harmful industrial byproducts were taken out to sea to be destroyed in specially designed ships equipped with high temperature combustion chambers and smokestacks But public outcry arose after the environmental and health risks of ocean incineration were exposed and the practice was banned in the early 1990s Smoke on the Water traces the rise and fall of ocean incineration showing how a transnational environmental movement tested the limits of U S political and economic power Dario Fazzi examines the anti ocean incineration movement that emerged on both sides of the Atlantic arguing that it succeeded by merging local advocacy with international mobilization He emphasizes the role played at the grassroots level by women migrant workers and other underrepresented groups who were at greatest risk Environmental groups for their part gathered and shared evidence about the harms of at sea incineration building scientific consensus and influencing international debates Smoke on the Water tells the compelling story of a campaign against environmental degradation in which people from marginalized communities took on the might of the U S military industrial complex It offers new insights into the transnational dimensions of environmental regulation the significance of nonstate actors in international history and the making of environmental justice movements **From Apocalypse to Way of Life** Frederick Buell, 2004-03 From Apocalypse to Way of Life is a comprehensive and in depth survey of environmental crisis as it has been understood for the last four decades Buell recounts the growing number of ecological and social problems critical for the environment and the impact that the growing experience with and understanding of them has had on American politics society and culture

developing countries and especially the poor people living in these countries Whether economic integration supports poverty reduction and how it can do so more effectively are key questions asked The research yields 3 main findings with bearings on current policy debates about globalization Firstly poor countries with some 3 billion people have broken into the global market for manufactures and services and this successful integration has generally supported poverty reduction Secondly inclusion both across countries and within them is important as a number of countries pop 2 billion are failing as states trading less and less and becoming marginal to the world economy Thirdly standardization or homogenization is a concern will economic integration lead to cultural or institutional homogenization Hazards Vulnerability and Environmental Justice

pace and power of technological innovations that have emerged in the 21st Century have been breathtaking These technological developments which include advances in networked information and communications biotechnology neurotechnology nanotechnology robotics and environmental engineering technology have raised a number of vital and complex questions Although these technologies have the potential to generate positive transformation and help address grand societal challenges the novelty associated with technological innovation has also been accompanied by anxieties about their risks and destabilizing effects Is there a potential harm to human health or the environment What are the ethical implications Do this innovations erode or antagonize values such as human dignity privacy democracy or other norms underpinning existing bodies of law and regulation These technological developments have therefore spawned a nascent but

growing body of law and technology scholarship broadly concerned with exploring the legal social and ethical dimensions of technological innovation This handbook collates the many and varied strands of this scholarship focusing broadly across a range of new and emerging technology and a vast array of social and policy sectors through which leading scholars in the field interrogate the interfaces between law emerging technology and regulation Structured in five parts the handbook I establishes the collection of essays within existing scholarship concerned with law and technology as well as regulatory governance II explores the relationship between technology development by focusing on core concepts and values which technological developments implicate III studies the challenges for law in responding to the emergence of new technologies examining how legal norms doctrine and institutions have been shaped challenged and destabilized by technology and even how technologies have been shaped by legal regimes IV provides a critical exploration of the implications of technological innovation examining the ways in which technological innovation has generated challenges for regulators in the governance of technological development and the implications of employing new technologies as an instrument of regulatory governance V explores various interfaces between law regulatory governance and new technologies across a range of key social domains

From the Inside Out Jill Lindsey Harrison, 2019-10-29 An examination of why government agencies allow environmental injustices to persist Many state and federal environmental agencies have put in place programs policies and practices to redress environmental injustices and yet these efforts fall short of meeting the principles that environmental justice activists have fought for In *From the Inside Out* Jill Lindsey Harrison offers an account of the bureaucratic culture that hinders regulatory agencies attempts to reduce environmental injustices It is now widely accepted that America's poorest communities communities of color and Native American communities suffer disproportionate harm from environmental hazards with higher exposure to pollution and higher incidence of lead poisoning cancer asthma and other diseases linked to environmental ills And yet Harrison reports some regulatory staff view these problems as beyond their agencies area of concern requiring too many resources or see neutrality as demanding color blind administration Drawing on more than 160 interviews with interviewees including 89 current or former agency staff members and more than 50 environmental justice activists and others who interact with regulatory agencies and more than 50 hours of participant observation of agency meetings both open and closed door Harrison offers a unique account of how bureaucrats resist undermine and disparage environmental justice reform and how environmental justice reformers within the agencies fight back by trying to change regulatory practice and culture from the inside out Harrison argues that equity not just aggregated overall improvement should be a metric for evaluating environmental regulation
