

a household article, it seems desirable to have a shorter name for it.

The tendency to abbreviate a long word is almost irresistible. It has sometimes been convenient to use the initials p.a. to designate the substance, but these same initials are used by medical men to mean pernicious anemia, and by physiologists to designate pyruvic acid.

It is suggested that especially for popular and semi-popular use the term *pentathen* be used as a substitute or abbreviation for the longer name.

### WANTED—SEDIMENTARY GALENAS

As may be seen from the abstract of A. O. Nier's work (University of Minnesota) included in the mimeographed edition of the "Report of the Committee on the Measurement of Geologic Time" just issued, especially pages 58-59, there is some indication that the age even of a common ore mineral like galena can be obtained from the proportion of isotopes in it, that the primal lead is indicated by the  $Pb^{204}$  and that the younger lead has a little larger proportion of the other isotopes which may be produced by radioactive disintegration which must be going on during geologic time.<sup>1</sup>

It will be noticed, however, in the results given on Table 2 that the galenas of Joplin, Missouri, have a relatively high proportion of the isotopes which may be of radiogenic origin. Just how this comes to be is a matter which needs further investigation, and while there are other matters of more importance at present, it would be well to get material ready for an investigation later. Galenas from other sedimentary occurrences, not only those in the three Missouri districts but in the Mississippi, or other sedimentary formations where the occurrence and geology is well known, would be desirable. If some of these occurred in connection with barite the facts should be noted.

Rarely, however, galena also occurs in the center of balls and septaria of siderite, clay iron stone, sometimes known as nigger head, and it might be possible to get valuable results from even two grams of such material. We hope that any such material will be kept for further scientific research and the Committee

on Measurement of Geologic Time will be glad to know about it.

### COLLECTION AND FILING OF SCIENTIFIC DATA

IN SCIENCE, issue of September 19, 1941, page 278, Alfred H. Taylor of the Experimental Research Laboratories, Burroughs Wellcome and Co., U. S. A., Tuckahoe, N. Y., suggests the collection and filing of data on absorption spectra at some central depository in order to make them easily available for all research workers. He points out how widely scattered the literature on absorption spectra is and how inconvenient it sometimes proves to obtain the data wanted even if they have been known for a long time. To avoid waste of time and money he proposes what may be called a sort of clearing-house outlining at the same time a working scheme for such an institution.

It may be of interest that in another field of science, human genetics, where the difficulties encountered are very much like those mentioned by Taylor, such a clearing-house dealing with genetical data in man has been set up by the Bureau of Human Heredity, 115 Gower Street, London, W. C. 1., some years ago and has met with ever-growing success. The working methods of this institution are exactly like those described by Taylor (with the only exception that there is no charge for information) and have proved so efficient that, on request of many research workers, the Bureau of Human Heredity has resolved to make use of its methods for some special tasks—*e.g.*, a survey on constitutional factors in cancer.

For this latter part of its activities the Bureau of Human Heredity has kindly been given hospitality by the Genetics Laboratory, Ohio State University, so that the work is now carried on in close cooperation by both institutions. The collection of data, although of course somewhat hampered by the conditions of war in Europe, is growing rapidly, owing to the interest of scientists all over the world; services may be expected to be available for all those interested in this field by next summer.

*Disease and Discovery* Elizabeth Fee, 2016-06-12 The story of a world renowned institution and a broad investigation of early twentieth century public health ideology in America Journal of the American Medical Association At the end of the nineteenth century public health was the province of part time political appointees and volunteer groups of every variety Public health officers were usually physicians but they could also be sanitary engineers lawyers or chemists there was little agreement about the skills and knowledge necessary for practice In *Disease and Discovery* Elizabeth Fee examines the conflicting ideas about public health s proper subject and scope and its search for a coherent professional unity and identity She draws on the debates and decisions surrounding the establishment of what was initially known as the Johns Hopkins School of Hygiene and Public Health the first independent institution for public health research and education to crystallize

the fundamental questions of the field Many of the issues of public health education in the early twentieth century are still debated today What is the proper relationship of public health to medicine What is the relative importance of biomedical environmental and sociopolitical approaches to public health Should schools of public health emphasize research skills over practical training Should they provide advanced training and credentials for the few or simpler educational courses for the many Fee explores the many dimensions of these issues in the context of the founding of the Johns Hopkins school She details the efforts to define the school s structure and purpose select faculty and students and organize the curriculum and she follows the school s growth and adaptation to the changing social environment through the beginning of World War II As Fee demonstrates not simply in its formation but throughout its history the School of Hygiene served as a crucible for the forces shaping the public health profession as a whole *Current List of Medical Literature* ,1941-07 *Investigating Cholera in Broad Street: A History in Documents* Peter Vinten-Johansen,2020-03-15 This book features various accounts of a cholera outbreak in West London that killed over 500 people in ten days during the late summer of 1854 What had caused the outbreak Local authorities of the time were flummoxed about the mode by which the disease had spread What has become known as the Broad Street pump episode is one of the most significant early examples of a team oriented investigation into the causes of an epidemic a hallmark of epidemiology and public health today This collection includes documents from the five separate investigations that were conducted into the possible causes John Snow and Henry Whitehead made independent investigations inspectors from the General Board of Health and the Sewer Commission as well as a parish inquiry committee also scrutinized the outbreak This volume traces competing notions of how this disease was transmitted starting with the first pandemic which reached England in 1831 and it documents how they developed over time
