Scientific and Technical Aerospace Reports ,1973 Creating Consent in Ba'thist Syria Esther

Meininghaus,2016-03-31 The challenge of maintaining dictatorial regimes through control co option and coercion while upholding a facade of legitimacy is something that has concerned leaders throughout the Middle East and beyond Nowhere is this more evident than in the Syria ruled by the Asads both Hafiz and his son Bashar Drawing on the example of the General Union of Syrian Women founded in 1967 Esther Meininghaus offers new insights into how the Syrian Ba thist regimes attempted to move beyond mere satisfaction with the compliance of the citizenry and to consolidate their rule amongst the local population Meininghaus argues that this was partially achieved through providing welfare services delivered by the Union as one of the state led mass organisations In this way she suggests these regimes did not only aim to undermine opposition and to create the illusion of consent but they factually catered to local needs and depended on consent Based on archival material interviews and statistics Creating Consent in Ba thist Syria will shed new light on mass organisations as a crucial institution of Ba thist state building and more broadly the construction of the Asad regimes **Paper ,1989 Soils as a Key Component of the Critical Zone 1** Jacques Berthelin,Christian Valentin,Jean Charles Munch,2018-07-27 This introductory book to the six volume series includes an introduction defining the critical zone for mankind that extends from tree canopy and the lower atmosphere to water table and unweathered rock Soils play a crucial role through the functions and the services that they provide to mankind The spatial and temporal variability of soils is represented by information systems whose importance recent evolutions and increasingly performing applications in France and in the world must be underlined The soil functions discussed in this book focus on the regulation of the water cycle biophysicochemical cycles and the habitat role of biodiversity The main services presented are those related to the provision of agricultural fodder and forest products energy as well as materials and the role of soil as infrastructure support They also include the different cultural dimensions of soils their representations being often linked to myths and rites as well as their values of environmental and archaeological records Finally the issue is raised of an off ground world *Carbon Nanotubes and Nanosensors* Isaac Elishakoff,Kevin Dujat,Giuseppe Muscolino,Simon Bucas,Toshiaki Natsuki,Chien Ming Wang,Demetris Pentaras,Claudia Versaci,Joel Storch,Noël Challamel,Yingyan Zhang,Guillaume Ghyselinck,2013-03-04 The main properties that make carbon nanotubes CNTs a promising technology for many future applications are extremely high strength low mass density linear elastic behavior almost perfect geometrical structure and nanometer scale structure Also CNTs can conduct electricity better than copper and transmit heat better than diamonds Therefore they are bound to find a wide and possibly revolutionary use in all fields of engineering The interest in CNTs and their potential use in a wide range of commercial applications such as nanoelectronics quantum wire interconnects field emission devices composites chemical sensors biosensors detectors etc have rapidly increased in the last two decades However the performance of any CNT based

nanostructure is dependent on the mechanical properties of constituent CNTs Therefore it is crucial to know the mechanical behavior of individual CNTs such as their vibration frequencies buckling loads and deformations under different loadings This title is dedicated to the vibration buckling and impact behavior of CNTs along with theory for carbon nanosensors like the Bubnov Galerkin and the Petrov Galerkin methods the Bresse Timoshenko and the Donnell shell theory **Theory of Ground Vehicles** J.
