Morazán, 2022-09-23 This textbook presents a systematic methodology for program development by using design recipes i.e. a series of steps each with a specific outcome that takes a problem solver from a problem statement to a working and tested programmed solution It introduces the reader to generative recursion heuristic searching accumulative recursion tail recursion iteration mutation loops program correctness and vectors It uses video game development to make the content fun while at the same time teaching problem solving techniques The book is divided into four parts Part I presents introductory material on basic problem solving and program design It starts by reviewing the basic steps of a design recipe using structural recursion on a list It then proceeds to review code refactoring a common technique used to refine programs when a better or more elegant way is found to solve a problem and introduces the reader to randomness Next Part II explores a new type of recursion called generative recursion It navigates the reader through examples involving fractal image generation efficient sorting and efficient searching techniques such as binary depth first and breadth first search Part III then explores a new type of recursion called accumulative or accumulator recursion Examples used include finding a path in a graph improving insertion sorting and list folding operations Finally Part IV explores mutation To aid the reader in properly sequencing mutations it presents Hoare Logic and program correctness In addition it introduces vectors vector
