research education violations of scientific rules financial processes The book concludes with suggested solutions Democracy is threatened in many countries in the free world The same is true of applied science It could be argued that in a world situation in which increasing numbers of people distrust politicians applied science would be the sector people should turn to for advice However this seems to occur to a decreasing extent Increasing numbers of results are produced by applied scientists and these results often diverge In that situation laymen tend to select the research results that confirm their own ideas In such a situation one could ask whether it is meaningful to have applied science and to allocate money to it There are threats to applied science coming from external sources with politicians and higher administration increasingly disregarding applied science but also from the inside Researchers reporting results dishonestly or in exaggerated ways and researchers who avoid results that do not confirm their own hypotheses are eroding the trust in applied science This book which uses Sweden a small European country with old and strong democratic and scientific traditions as an empirical example puts all the external and internal problems surrounding applied science in one context Among the topics covered Introduction why do people not listen Production and producers Research students How does applied science operate Communication with society Examples of situations in which applied science should have been used more Solutions Conclusions Underuse of Applied Science in Changing Societies Trust in Applied Science Among Lay People is an essential resource for researchers research students and research teachers in psychosomatic medicine psychiatry behavioral medicine social medicine psychology sociology social work nursing and public health Societal actors also would find the book a useful resource for their work

One Legacy of Paul F. Brandwein Deborah C. Fort, 2010-02-16 Once again our nation has a powerful need for a revolution devoted to creating scientists As we face the challenges of climate change global

competitiveness biodiversity loss energy needs and dwindling food supplies we find ourselves in a period where both scientific literacy and the pool of next generation scientists are dwindling To solve these complex issues and maintain our own national security we have to rebuild a national ethos based on sound science education for all from which a new generation of scientists will emerge The challenge is how to create this transformation Those shaping national policy today in 2009 need look no further than what worked a half century ago In 1957 Sputnik circled and sent a clarion call for America to become the world's most technologically advanced nation In 1958 Congress passed the National Defense Education Act which focused the national will and called for scholars and teachers to successfully educate our youth in science math and engineering It was during this time period that Paul F Brandwein emerged as a national science education leader to lay the foundation for the changes needed in American education to create the future scientists essential to the nation's well being
