*Comparable Corpora and Computer-assisted Translation* Estelle Maryline Delpech, 2014-07-22 Computer assisted translation CAT has always used translation memories which require the translator to have a corpus of previous translations that the CAT software can use to generate bilingual lexicons This can be problematic when the translator does not have such a corpus for instance when the text belongs to an emerging field To solve this issue CAT research has looked into the leveraging of comparable corpora i.e. a set of texts in two or more languages which deal with the same topic but are not translations of one another This work had two primary objectives The first is to assess the input of lexicons extracted from comparable corpora in the context of a specialized human translation task The second objective is to identify bilingual lexicon extraction methods which best match the translators needs determining the current limits of these techniques and suggesting improvements The author focuses in particular on the identification of fertile translations the management of multiple morphological structures and the ranking of candidate translations The experiments are carried out on two language pairs English French and English German and on specialized texts dealing with breast cancer This research puts significant emphasis on applicability methodological choices are guided by the needs of the final users This book is organized in two parts the first part presents the applicative and scientific context of the research and the second part is given over to efforts to improve compositional translation The research work presented in this book received the PhD Thesis award 2014 from the French association for natural language processing ATALA

research questions Diane H Sonnenwald and the contributors to this volume seek to shed light on these issues by sharing reflections on the theory development process These reflections are not meant to revolve around data collection and analysis rather they focus on the struggles challenges successes and excitement of developing theories The particular theories that the contributors explore in their essays range widely from theories of literacy and reading to theories of design and digital search Several chapters engage with theories of the behavior of individuals and groups some deal with processes of evaluation others reflect on questions of design and the rest treat cultural and scientific heritage The ultimate goal Sonnenwald writes in her introduction is to encourage inspire and assist individuals striving to develop and or teach theory development

**Text, Speech and Dialogue** Petr Sojka, Ivan Kopecek, Karel Pala, 2003-08-02 The Text Speech and Dialogue TSD Conference 2002 it should be noticed is now being held

for the fifth time and we are pleased to observe that in its short history it has turned out to be an international forum successfully intertwining the basic fields of NLP. It is our strong hope that the conference contributes to a better understanding between researchers from the various areas and promotes more intensive mutual cooperation. So far the communication between man and computers has displayed a one-way nature: humans have to know how the machines work and only then can they understand them. The opposite, however, is still quite far from being real: our understanding of how our user-friendly computers can understand us humans is not deep enough yet. A lot of work has to be done both in the near and distant future. Let TSD 2002 be a modest contribution to this goal. The conference also serves well in its second purpose to facilitate researchers meeting in the NLP field from Western and Eastern Europe. Moreover, many participants now come from other parts of the world, thus making TSD a real crossroads for researchers in the NLP area. This volume contains the proceedings of this conference held in Brno, September 9-12, 2002. We were honored to have as keynote speakers James Pustejovsky from Brandeis University and Ronald Cole from the University of Colorado. We would like to thank all the Program Committee members and external reviewers for their conscientious and diligent reviewing work.
