## **Scientific Impact Of The Goddard High Resolution Spectrograph:**

*The Scientific Impact of the Goddard High Resolution Spectrograph* John C. Brandt, Thomas B. Ake, Carolyn Collins Petersen, 1998      **A Decade of Hubble Space Telescope Science** Space Telescope Science Institute (U.S.).

Symposium, 2003-06-26 The Hubble Space Telescope has made some of the most dramatic discoveries in the history of astronomy From its vantage point 600km above the Earth Hubble is able to capture images and spectra that would be difficult or impossible to obtain from the ground This volume represents some of the most important scientific achievements of the Hubble Space Telescope in its first decade of operation Written by world experts this is an indispensable collection of review articles for researchers and graduate students      *The Analysis of Starlight* John B. Hearnshaw, 2014-03-17 First published in 1986 this is the story of the analysis of starlight by astronomical spectroscopy Beginning with Joseph Fraunhofer's discovery of spectral lines in the early nineteenth century this new edition continues the story through to the year 2000 In addition to the key discoveries it presents the cultural and social history of stellar astrophysics by introducing the leading astronomers and their struggles triumphs and disagreements Basic concepts in spectroscopy and spectral analysis are included so both observational and theoretical aspects are described in a non mathematical framework This new edition covers the final decades of the twentieth century with its major advances in stellar astrophysics the discovery of extrasolar planets new classes of stars and the observation of the ultraviolet spectra of stars from satellites The in depth coverage makes it essential reading for graduate students working in stellar spectroscopy professional and amateur astronomers and historians of science      **Comets II** Michel C. Festou, H. Uwe Keller, Harold A. Weaver, 2004-11-01 The study of comets is a field that has seen tremendous advances in recent years far surpassing the knowledge reflected in the original Comets volume published as part of the Space Science Series in 1982 This new volume with more than seventy contributing authors represents the first complete overview of comet science in more than a decade and contains the most extensive collection of knowledge yet assembled in the field Comets II situates comet science in the global context of astrophysics for the first time by beginning with a series of chapters that describe the connection between stars and planets It continues with a presentation of the formation and evolution of planetary systems enabling the reader to clearly see the key role played in our own solar system by the icy planetesimals that were the seeds of the giant planets and transneptunian objects The book presents the key results obtained during the 1990s in particular those collected during the apparition of the exceptional comets C Hyakutake and C Hale Bopp in 1996 1997 The latest results obtained from the in situ exploration of comets P Borrelly and P Wild 2 are also discussed in detail Each topic is designed to be accessible to students or young researchers looking for basic yet detailed complete and accurate information on comet science With its emphasis on the origin of theories and the future of research Comets II will enable scientists to make connections across disciplinary boundaries and will set the stage for discovery and new understanding in the coming years      *Introduction to Comets* John C. Brandt, Robert D.

Chapman,2004-03-11 We have now reached an exciting time in cometary research With several missions launched or about to be launched in the near future cometary research is rapidly being driven forward This book describes the wealth of information known prior to the return of Halley s comet and the new information discovered since then It presents material on important background topics including observational techniques plasma physics celestial mechanics the solar wind and cosmogony The science of comets is described in order of its discovery from tail phenomena to coma morphology through to the most recent findings from space missions The relationship between comets and asteroids is discussed and future space missions to investigate comets are described This comprehensive text is a complete and up to date treatment of the subject suitable for graduate and advanced undergraduate students of astronomy and planetary science      *Scientific and Technical Aerospace Reports* ,1994      **The Restoration of HST Images and Spectra** ,1991      **Structure and Evolution of the Intergalactic Medium from QSO Absorption Line Systems** Patrick Petitjean,Stéphane Charlot,1997      **Composition and Origin of Cometary Materials** K. Altwegg,P. Ehrenfreund,Johannes Geiss,W.F. Huebner,2012-12-06 Comet nuclei are the most primitive bodies in the solar system They have been created far away from the early Sun and their material properties have been altered the least since their formation Thus the composition and structure of comet nuclei provide the best information about the chemical and thermodynamic conditions in the nebula from which our solar system formed In this volume cometary experts review a broad spectrum of ideas and conclusions based on in situ measurement of Comet Halley and remote sensing observations of the recent bright Comets Hale Bopp and Hyakutake The chemical character of comet nuclei suggests many close similarities with the composition of interstellar clouds It also suggests material mixing from the inner solar nebula and challenges the importance of the accretion shock in the outer nebula The book is intended to serve as a guide for researchers and graduate students working in the field of planetology and solar system exploration Several special indexes focus the reader s attention to detailed results and discussions It concludes with recommendations for laboratory investigations and for advanced modeling of comets the solar nebula and the collapse of interstellar clouds
