Scientific Computation with Automatic Result Verification Ulrich Kulisch,Hans J. Stetter,2012-12-06 Scientific Computation with Result Verification has been a persevering research topic at the Institute for Applied Mathematics of Karlsruhe University for many years A good number of meetings have been devoted to this area The latest of these meetings was held from 30 September to 2 October 1987 in Karlsruhe it was co sponsored by the GAMM Committee on Computer Arithmetic and Scientific Computation This volume combines edited versions of selected papers presented at this conference including a few which were presented at a similar meeting one year earlier The selection was made on the basis of relevance to the topic chosen for this volume All papers are original contributions In an appendix we have supplied a short account of the Fortran SC language which permits the programming of algorithms with result verification in a natural manner The editors hope that the publication of this material

as a Supplementum of Computing will further stimulate the interest of the scientific community in this important tool for Scientific Computation In particular we would like to make application scientists aware of its potential The papers in the second chapter of this volume should convince them that automatic result verification may help them to design more reliable software for their particular tasks We wish to thank all contributors for adapting their manuscripts to the goals of this volume We are also grateful to the Publisher Springer Verlag of Vienna for an efficient and quick production

Advances in Computers Marvin Zelkowitz, 2009-06-12 This is volume 72 of Advances in Computers a series that began back in 1960 and is the oldest continuing series chronicling the ever changing landscape of information technology Each year three volumes are produced which present approximately 20 chapters that describe the latest technology in the use of computers today In this volume 72 we present the current status in the development of a new generation of high performance computers The computer today has become ubiquitous with millions of machines being sold and discarded annually Powerful machines are produced for only a few hundred U S dollars

and one of the problems faced by vendors of these machines is that due to the continuing adherence to Moore's law where the speed of such machines doubles about every 18 months we typically have more than enough computer power for our needs for word processing surfing the web or playing video games. However the same cannot be said for applications that require large powerful machines. Applications such as weather and climate prediction fluid flow for designing new airplanes or automobiles or nuclear plasma flow require as much computer power as we can provide and even that is not enough. Today's machines operate at the teraflop level trillions of floating point operations per second and this book describes research into the petaflop region 1 015 FLOPS. The six chapters provide an overview of current activities that will provide for the introduction of these machines in the years 2011 through 2015. **Interdisciplinary Perspectives on Business**

Convergence, Computing, and Legality Khurana, Reema, Aggarwal, Rashmi, 2013-06-30 As digital technologies develop companies envision new ways to incorporate ever more disparate elements in their products such as the combination of computing power and telecommunications in modern smart phones. *Interdisciplinary Perspectives on Business Convergence Computing and Legality* investigates the development of convergent and interoperable systems in business environments with a particular focus on potential legal implications that emerge when a company begins branching out into domains traditionally occupied by suppliers and consumers. Business and law professionals both in academia and in practice will use this book to gain a greater understanding of the growth of convergence in the field of information technologies and how such transformations affect business practices around the world. National Library of Medicine Current Catalog National

Library of Medicine (U.S.), *Mobile Computing Handbook* Mohammad Ilyas, Imad Mahgoub, 2004-12-28 The debut of small inexpensive yet powerful portable computers has coincided with the exponential growth of the Internet making it possible to access computing resources and information at nearly any location at almost any time. This new trend mobile computing is poised to become the main technology driver for a decade to come. There are many **Iterative Splitting Methods for Differential Equations** Juergen Geiser, 2011-06-01 *Iterative Splitting Methods for Differential Equations* explains how to solve evolution equations via novel iterative based splitting methods that efficiently use computational and memory resources. It focuses on systems of parabolic and hyperbolic equations including convection diffusion reaction equations heat equations and wave equations. In the theoretical part of the book the author discusses the main theorems and results of the stability and consistency analysis for ordinary differential equations. He then presents extensions of the iterative splitting methods to partial differential equations and spatial and time dependent differential equations. The practical part of the text applies the methods to benchmark and real life problems such as waste disposal elastics wave propagation and complex flow phenomena. The book also examines the benefits of equation decomposition. It concludes with a discussion on several useful software packages including r3t and FIDOS. Covering a wide range of theoretical and practical issues in multiphysics and multiscale problems this book explores the benefits of using iterative splitting schemes to solve physical problems. It illustrates how

iterative operator splitting methods are excellent decomposition methods for obtaining higher order accuracy

Secure Cloud Computing Sushil Jajodia, Krishna Kant, Pierangela Samarati, Anoop Singhal, Vipin Swarup, Cliff Wang, 2014-01-23 This book presents a range of cloud computing security challenges and promising solution paths. The first two chapters focus on practical considerations of cloud computing. In Chapter 1, Chandramouli Iorga and Chokani describe the evolution of cloud computing and the current state of practice followed by the challenges of cryptographic key management in the cloud. In Chapter 2, Chen and Sion present a dollar cost model of cloud computing and explore the economic viability of cloud computing with and without security mechanisms involving cryptographic mechanisms. The next two chapters address security issues of the cloud infrastructure. In Chapter 3, Szefer and Lee describe a hardware enhanced security architecture that protects the confidentiality and integrity of a virtual machine's memory from an untrusted or malicious hypervisor. In Chapter 4, Tsugawa et al discuss the security issues introduced when Software Defined Networking (SDN) is deployed within and across clouds. Chapters 5-9 focus on the protection of data stored in the cloud. In Chapter 5, Wang et al present two storage isolation schemes that enable cloud users with high security requirements to verify that their disk storage is isolated from some or all other users without any cooperation from cloud service providers. In Chapter 6, De Capitani di Vimercati, Foresti, and Samarati describe emerging approaches for protecting data stored externally and for enforcing fine grained and selective accesses on them and illustrate how the combination of these approaches can introduce new privacy risks. In Chapter 7, Le Kant and Jajodia explore data access challenges in collaborative enterprise computing environments where multiple parties formulate their own authorization rules and discuss the problems of rule consistency enforcement and dynamic updates. In Chapter 8, Smith et al address key challenges to the practical realization of a system that supports query execution over remote encrypted data without exposing decryption keys or plaintext at the server. In Chapter 9, Sun et al provide an overview of secure search techniques over encrypted data and then elaborate on a scheme that can achieve privacy preserving multi keyword text search. The next three chapters focus on the secure deployment of computations to the cloud. In Chapter 10, Oktay et al present a risk based approach for workload partitioning in hybrid clouds that selectively outsources data and computation based on their level of sensitivity. The chapter also describes a vulnerability assessment framework for cloud computing environments. In Chapter 11, Albanese et al present a solution for deploying a mission in the cloud while minimizing the mission's exposure to known vulnerabilities and a cost effective approach to harden the computational resources selected to support the mission. In Chapter 12, Kontaxis et al describe a system that generates computational decoys to introduce uncertainty and deceive adversaries as to which data and computation is legitimate. The last section of the book addresses issues related to security monitoring and system resilience. In Chapter 13, Zhou presents a secure provenance based capability that captures dependencies between system states, tracks state changes over time and that answers attribution questions about the existence or change of a system's state at a given time. In Chapter 14, Wu et al

present a monitoring capability for multicore architectures that runs monitoring threads concurrently with user or kernel code to constantly check for security violations Finally in Chapter 15 Hasan Cam describes how to manage the risk and resilience of cyber physical systems by employing controllability and observability techniques for linear and non linear systems
