Devreese,P.E. Van Camp,2012-12-06 The International Workshops on The Use of Supercomputers in Theoretical Science have become a tradition at the Univer sity of Antwerp Belgium The first one took place in 1984 This volume combines the proceedings of the second work shop December 12 1985 of the third June 16 1987 and of the fourth June 9 1988 The principal aim of the International Workshops is to present the state of the art in scientific high speed computa tion Indeed during the past ten years computational science has become a third methodology with merits equal to the theo retical and experimental sciences Regretfully access to supercomputers remains limited for academic researchers None theless supercomputers have become a major tool for scientists in a wide variety of scientific fields and they lead to a realistic solution of problems that could not be solved a decade ago It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS for the sponsoring of all the workshops These workshops are organized in the framework of the Third Cy cle Vectorization Parallel Processing and Supercomputers which is also funded by the NFWO FNRS The other sponsor I want to thank is the University of Antwerp where the workshops took place The University of Antwerp UIA together with the NFWO FNRS are also the main sponsors of the ALPHA project which gives the scientists of Belgium the opportunity to obtain an easy supercomputer connection *Scientific Computing on Supercomputers II* J.T. Devreese,2012-12-06 The International Workshop on The Use of Supercomputers in Theoretical Science took place on November 29 and 30 1989 at the University of Antwerp UIA Antwerpen Belgium It was the fifth in a series of workshops the first of which took place in 1984 The principal aim of these workshops is to present the state of the art in scientific large

scale and high speed computation Computational science has developed into a third methodology equally important now as its theoretical and experimental companions Gradually academic researchers acquired access to a variety of supercomputers and as a consequence computational science has become a major tool for their work It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS and the Ministry of Scientific Affairs for sponsoring the workshop It was organized both in the framework of the Third Cycle Vectorization Parallel Processing and Supercomputers and the Governemental Program in Information Technology We also very much would like to thank the University of Antwerp Universitaire Instelling Antwerpen UIA for financial and material support Special thanks are due to Mrs H Evans for the typing and editing of the manuscripts and for the preparation of the author and subject index   <u>Scientific Computing on Supercomputers</u> Matti Vauhkonen,Piet E. Van Camp,1989   <u>Large-Scale Scientific Computing</u> Ivan Lirkov,Svetozar Margenov,Jerzy Wasniewski,2010-04-23 This book constitutes the thoroughly refereed post conference proceedings of the 7th International Conference on Large Scale Scientific Computations LSSC 2009 held in Sozopol Bulgaria in June 2009 The 93 revised full papers presented together with 5 plenary and invited papers were carefully reviewed and selected from numerous submissions for inclusion in the book The papers are organized in topical sections on multilevel and multiscale preconditioning methods multilevel and multiscale methods for industrial applications environmental modeling control and uncertain systems application of metaheuristics to large scale problems monte carlo methods applications distributed computing grid and scientific and engineering applications reliable numerical methods for differential equations novel applications of optimization ideas to the numerical Solution of PDEs and contributed talks   **Parallel Scientific Computing** Jack Dongarra,Jerzy Wasniewski,1994-11-23 This volume presents the proceedings of the First International workshop on Parallel Scientific Computing PARA 94 held in Lyngby Denmark in June 1994 It reports interdisciplinary work done by mathematicians scientists and engineers working on large scale computational problems in discussion with computer science specialists in the field of parallel methods and the efficient exploitation of modern high performance computing resources The 53 full refereed papers provide a wealth of new results an up to date overview on high speed computing facilities including different parallel and vector computers as well as workstation clusters is given and the most important numerical algorithms with a certain emphasis on computational linear algebra are investigated   **1989 National Science Foundation Authorization** United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Science, Research, and Technology,1988   **Principles of Parallel Scientific Computing** Tobias Weinzierl,2022-02-09 New insight in many scientific and engineering fields is unthinkable without the use of numerical simulations running efficiently on modern computers The faster we get new results the bigger and accurate are the problems that we can solve It is the combination of mathematical ideas plus efficient programming that drives the progress in many disciplines Future champions in the area thus will have to be qualified in their application domain they will need a profound understanding of

some mathematical ideas and they need the skills to deliver fast code The present textbook targets students which have programming skills already and do not shy away from mathematics though they might be educated in computer science or an application domain It introduces the basic concepts and ideas behind applied mathematics and parallel programming that we need to write numerical simulations for today s multicore workstations Our intention is not to dive into one particular application domain or to introduce a new programming language we lay the generic foundations for future courses and projects in the area The text is written in an accessible style which is easy to digest for students without years and years of mathematics education It values clarity and intuition over formalism and uses a simple N body simulation setup to illustrate basic ideas that are of relevance in various different subdomains of scientific computing Its primary goal is to make theoretical and paradigmatic ideas accessible to undergraduate students and to bring the fascination of the field across

The Science of Computer Benchmarking Roger W. Hockney,1996-01-01 This book provides an introduction to computer benchmarking Hockney includes material concerned with the definition of performance parameters and metrics and defines a set of suitable metrics with which to measure performance and units with which to express them He also presents new ideas resulting from the application of dimensional analysis to the field of computer benchmarking This results in the definition of a dimensionless universal scaling diagram that completely describes the scaling properties of a class of computer benchmarks on a single diagram for all problem sizes and all computers describable by a defined set of hardware parameters   The Future of Supercomputing National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on the Future of Supercomputing,2003-10-08 The Committee on the Future of Supercomputing was tasked to assess prospects for supercomputing technology research and development in support of U S needs to examine key elements of context the history of supercomputing the erosion of research investment the changing nature of problems demanding supercomputing and the needs of government agencies for supercomputing capabilities and to assess options for progress This interim report establishes context including the history and current state of supercomputing application requirements technology evolution the socioeconomic context to identify some of the issues that may be explored in more depth in the second phase of the study   **Information Technology Digest** ,1992   Scientific Information Bulletin ,1990   Parallel Scientific Computation Rob H. Bisseling,2020-09-30 Building upon the wide ranging success of the first edition Parallel Scientific Computation presents a single unified approach to using a range of parallel computers from a small desktop computer to a massively parallel computer The author explains how to use the bulk synchronous parallel BSP model to design and implement parallel algorithms in the areas of scientific computing and big data and provides a full treatment of core problems in these areas starting from a high level problem description via a sequential solution algorithm to a parallel solution algorithm and an actual parallel program written in BSPlib Every chapter of the book contains a theoretical section and a practical section presenting a parallel program and

numerical experiments on a modern parallel computer to put the theoretical predictions and cost analysis to the test Every chapter also presents extensive bibliographical notes with additional discussions and pointers to relevant literature and numerous exercises which are suitable as graduate student projects The second edition provides new material relevant for big data science such as sorting and graph algorithms and it provides a BSP approach towards new hardware developments such as hierarchical architectures with both shared and distributed memory A single simple hybrid BSP system suffices to handle both types of parallelism efficiently and there is no need to master two systems as often happens in alternative approaches Furthermore the second edition brings all algorithms used up to date and it includes new material on high performance linear system solving by LU decomposition and improved data partitioning for sparse matrix computations The book is accompanied by a software package BSPedupack freely available online from the author s homepage which contains all programs of the book and a set of test driver programs This package written in C can be run using modern BSPlib implementations such as MulticoreBSP for C or BSPonMPI *Visualization in Scientific Computing* Michel Grave,Yvon Le Lous,W.Terry Hewitt,2012-12-06 Visualization in scientific computing is getting more and more attention from many people Especially in relation with the fast increase of com puting power graphic tools are required in many cases for interpreting and presenting the results of various simulations or for analyzing physical phenomena The Eurographics Working Group on Visualization in Scientific Com puting has therefore organized a first workshop at Electricite de France Clamart in cooperation with ONERA Chatillon A wide range of pa pers were selected in order to cover most of the topics of interest for the members of the group for this first edition and 26 of them were presented in two days Subsequently 18 papers were selected for this volume 1 he presentations were organized in eight small sessions in addition to discussions in small subgroups The first two sessions were dedicated to the specific needs for visualization in computational sciences the need for graphics support in large computing centres and high performance net works needs of research and education in universities and academic cen tres and the need for effective and efficient ways of integrating numerical computations or experimental data and graphics Three of those papers are in Part I of this book The third session discussed the importance and difficulties of using stan dards in visualization software and was related to the fourth session where some reference models and distributed graphics systems were discussed Part II has five papers from these sessions **Form and Function of Mammalian Lung: Analysis by Scientific Computing** Andres Kriete,2013-03-07 1 1 Overview The precise knowledge of the three dimensional 3 D assembly of biological structures is still in its origin As an example a widely accepted concept and common belief of the structure of the airway network oflung is that of a regular dichotomous branching pattern also known as the trumpet model This model first introduced by Weibel in 1963 is often used in clinical and physiological applications However if this concept of dichotomy is used to model lung a shape is obtained that is quite different from a real lung As a matter of fact many previous quantitative morphological and stereological investigations of lung did not concentrate on the

spatial aspect of lung morphology but delivered data in a more statistical fashion Accordingly the functional behavior predicted by such a model becomes questionable and indeed the morphometrically predicted lung capacity exceeds the physiological required capacity by a factor of 1 3 up to a factor of2 This problem has also been termed a paradox as discussed by Weibel in 1983 In the rare cases where descriptive models of the mammalian bronchial tree exist monopodial in small mammals dichotomous in larger ones the understanding of the historical and or functional reasons for size related changes in the general design is not explainable This investigation is trying to overcome this gap by computer modeling and functional simulation   **Large-scale scientific computation at the Los Alamos Scientific Laboratory** B.
