## **Scientific Discovery Case Studies:**

**Scientific Discovery: Case Studies** Thomas Nickles, 2012-12-06 The history of science is articulated by moments of discovery Yet these moments are not simple or isolated events in science Just as a scientific discovery illuminates our understanding of nature or of society and reveals new connections among phenomena so too does the history of scientific activity and the analysis of scientific reasoning illuminate the processes which give rise to moments of discovery and the complex network of consequences which follow upon such moments Understanding discovery has not been until recently a major concern of modern philosophy of science Whether the act of discovery was regarded as mysterious and inexplicable or obvious and in no need of explanation modern philosophy of science in effect bracketed the question It concentrated instead on the logic of scientific explanation or on the issues of validation or justification of scientific theories or laws The recent revival of interest in the context of discovery indeed in the acts of discovery on the part of philosophers and historians of science represents no one particular methodological or philosophical orientation It proceeds as much from an empiricist and analytical approach as from a sociological or historical one from considerations of the logic of science as much as from the alogical or extralogical contexts of scientific thought and practice But in general this new interest focuses sharply on the actual historical and contemporary cases of scientific discovery and on an examination of the act or moment of discovery in situ

*Scientific Discovery* Thomas Nickles, 1980      *Scientific Discovery* Thomas Nickles, 1980      *Companion to the History of Modern Science* G. N. Cantor, G. N. Cantor, J. R. R. Christie, M. J. S. **Science, Politics and Social Practice** Robert Sonn  Cohen, Kostas Gavroglu, John Stachel, Marx W. Wartofsky, 1995-02-28 In three volumes a distinguished group of scholars from a variety of disciplines in the natural and social sciences the humanities and the arts contribute essays in honor of Robert S. Cohen on the occasion of his 70th birthday The range of the essays as well as their originality and their critical and historical depth pay tribute to the extraordinary scope of Professor Cohen's intellectual interests as a scientist philosopher and a humanist and also to his engagement in the world of social and political practice In *Science Politics and Social Practice* Volume II of *Essays in Honor of Robert S. Cohen* an international group of scholars philosophers sociologists historians and political scientists discuss issues at the cutting edge of contemporary social and political thought and its bearing on science Several essays discuss the relations of Marxism

to science and specifically to the philosophies of science of Carnap and Popper as well as Soviet Marxism and the effects of Stalinism on Soviet science There are also essays on the philosophy and methodology of the social sciences on questions of method and aim in historical narrative on the issue of cultural relativism and more *Science as Autobiography* Thomas Soderqvist, 2008-10-01 This biography probes the unusual mind the dramatic life and the outstanding scientific work of Danish born immunologist Niels Jerne 1911-1994 Jerne's Nobel Prize winning achievements in the field of immunology place him in the pantheon of great twentieth century biomedical theorists yet his life is perhaps even more interesting than his science *Science as Autobiography* tells Jerne's story weaving together a narrative of his life experiences emotional life and extraordinarily creative scientific work A legendary figure who preferred an afternoon of conversation in a Paris wine bar to work in the laboratory Jerne was renowned for his unparalleled powers of concentration and analytical keenness as well as his dissonant personal life The book explores Jerne the man and scientist making the fascinating argument that his life experience and view of himself became a metaphorical resource for the construction of his theories The book also probes the moral issues that surrounded Jerne's choice to sacrifice his family in favor of scientific goals and the pursuit of excellence

**Original Strategies for Training and Educational Initiatives in Bioinformatics** Hugo Verli, Raquel Cardoso de Melo Minardi, 2022-10-07 *The Process of Science* N.J. Nersessian, 2012-12-06 For some time now the philosophy of science has been undergoing a major transformation It began when the received view of scientific knowledge that developed by logical positivists and their intellectual descendants was challenged as bearing little resemblance to and having little relevance for the understanding of real science Subsequently an overwhelming amount of criticism has been added One would be hard pressed to find anyone who would support the received view today Yet in the search for a new analysis of scientific knowledge this view continues to exert influence over the tenor of much of present day philosophy of science in particular over its problems and its methods of analysis There has however emerged an area within the discipline called by some the new philosophy of science that has been engaged in transforming the problems and methods of philosophy of science While there is far from a consensus of beliefs in this area most of the following contentions would be affirmed by those working in it that science is an open ended on going activity whose character has changed significantly during its history that science is not a monolithic enterprise that good science can lead to false theories that science has its roots in everyday circumstances needs methods concepts etc **Bibliography of the History of Medicine**, 1984 **Theory Change in Science** Lindley Darden, 1991 This challenging and innovative book examines the processes involved in the birth and development of new scientific ideas The author has searched for strategies used by scientists for producing new theories both those that yield a range of plausible hypotheses and ones that aid in narrowing that range She goes on to focus on the development of the theory of the gene as a case study in scientific creativity Her discussion of modern genetics greatly demystifies the philosophy of science and establishes a realistic framework for understanding how scientists actually go about their work

This compelling work will interest a broad range of readers including biologists and geneticists along with historians and philosophers of science      *Computational Philosophy of Science* Paul Thagard,1988 By applying research in artificial intelligence to problems in the philosophy of science Paul Thagard develops an exciting new approach to the study of scientific reasoning This approach uses computational ideas to shed light on how scientific theories are discovered evaluated and used in explanations Thagard describes a detailed computational model of problem solving and discovery that provides a conceptually rich yet rigorous alternative to accounts of scientific knowledge based on formal logic and he uses it to illuminate such topics as the nature of concepts hypothesis formation analogy and theory justification      **Reasoning in**

**Biological Discoveries** Lindley Darden,2006-06-26 Reasoning in Biological Discoveries brings together a series of essays which focus on one of the most heavily debated topics of scientific discovery Collected together and richly illustrated Darden's essays represent a groundbreaking foray into one of the major problems facing scientists and philosophers of science Divided into three sections the essays focus on broad themes notably historical and philosophical issues at play in discussions of biological mechanism and the problem of developing and refining reasoning strategies including interfield relations and anomaly resolution Darden summarizes the philosophy of discovery and elaborates on the role that mechanisms play in biological discovery Throughout the book she uses historical case studies to extract advisory reasoning strategies for discovery Examples in genetics molecular biology biochemistry immunology neuroscience and evolutionary biology reveal the process of discovery in action      *Philosophy of Science* William Bechtel,2013-12-16 This text focuses on two major issues the nature of scientific inquiry and the relations between scientific disciplines Designed to introduce the basic issues and concepts in the philosophy of science Bechtel writes for an audience with little or no philosophical background The first part of the book explores the legacy of Logical Positivism and the subsequent post Positivist developments in the philosophy of science The second section examines arguments for and against using a model of theory reduction to integrate scientific disciplines The book concludes with a chapter describing non reductionist approaches for relating scientific disciplines using psycholinguistic and cognitive neuroscience models      Plate Tectonics Naomi Oreskes,2018-10-08 This book provides an overview of the history of plate tectonics including in context definitions of the key terms It explains how the forerunners of the theory and how scientists working at the key academic institutions competed and collaborated until the theory coalesced

**Heuristic Reasoning** Emiliano Ippoliti,2014-09-05 How can we advance knowledge Which methods do we need in order to make new discoveries How can we rationally evaluate reconstruct and offer discoveries as a means of improving the method of discovery itself And how can we use findings about scientific discovery to boost funding policies thus fostering a deeper impact of scientific discovery itself The respective chapters in this book provide readers with answers to these questions They focus on a set of issues that are essential to the development of types of reasoning for advancing knowledge such as models for both revolutionary findings and paradigm shifts ways of rationally addressing scientific disagreement e g

when a revolutionary discovery sparks considerable disagreement inside the scientific community frameworks for both discovery and inference methods and heuristics for economics and the social sciences      *Computer Simulations in Science and Technology Studies* Petra Ahrweiler, Nigel Gilbert, 2012-12-06 What is it about the structure and organisation of science and technology that has led to the spectacularly successful growth of knowledge during this century This book explores this important and much debated question in an innovative way by using computer simulations The computer simulation of societies and social processes is a methodology which is rapidly becoming recognised for its potential in the social sciences This book applies the tools of simulation systematically to a specific domain science and technology studies The book shows how computer simulation can be applied both to questions in the history and philosophy of science and to issues of concern to sociologists of science and technology Chapters in the book demonstrate the use of simulation for clarifying the notion of creativity and for understanding the logical processes employed by eminent scientists to make their discoveries The book begins with three introductory chapters The first introduces simulation for the social sciences surveying current work and explaining the advantages and pitfalls of this new methodology The second and third chapters review recent work on theoretical aspects of social simulation introducing fundamental concepts such as self organisation and complexity and relating these to the simulation of scientific discovery      **Practical Philosophy and Action Theory** Timo

Airaksinen, 2023-04-14 Action theory and practical philosophy have their well grounded tradition both in Finland and in Poland This text is a collection of PRACTICAL PHILOSOPHY AND ACTION THEORY Praxiology The International Annual of Practical Philosophy and Methodology Volume 2 This volume is divided into three parts the first one being so to speak a business card of Finland s contemporary practical philosophy the second one being a business card of the Poland s present praxiology and a collection of contributions from other philosophical environments related to the topics      **Philosophy of**

**Experimental Biology** Marcel Weber, 2004-08-30 Philosophy of Experimental Biology explores some central philosophical issues concerning scientific research in experimental biology including genetics biochemistry molecular biology developmental biology neurobiology and microbiology It seeks to make sense of the explanatory strategies concepts ways of reasoning approaches to discovery and problem solving tools models and experimental systems deployed by scientific life science researchers and also integrates developments in historical scholarship in particular the New Experimentalism It concludes that historical explanations of scientific change that are based on local laboratory practice need to be supplemented with an account of the epistemic norms and standards that are operative in science This book should be of interest to philosophers and historians of science as well as to scientists      Scientific Discovery Thomas Nickles, 1980

**Changing Order** Harry Collins, 1992-06-15 This fascinating study in the sociology of science explores the way scientists conduct and draw conclusions from their experiments The book is organized around three case studies replication of the TEA laser detecting gravitational rotation and some experiments in the paranormal In his superb book Collins shows why the

quest for certainty is disappointed He shows that standards of replication are of course social and that there is consequently no outside standard no Archimedean point beyond society from which we can lever the intellects of our fellows Donald M McCloskey Journal of Economic Psychology Collins is one of the genuine innovators of the sociology of scientific knowledge Changing Order is a rich and entertaining book Isis The book gives a vivid sense of the contingent nature of research and is generally a good read Augustine Brannigan Nature This provocative book is a review of Collins s work and an attempt to explain how scientists fit experimental results into pictures of the world A promising start for new explorations of our image of science too often presented as infallibly authoritative Jon Turney New Scientist
