**Stalinist Genetics** Dmitri Stanchevici, 2017-03-02 Stalinist Genetics focuses on the rhetoric of T D Lysenko the founder of an agrobiological doctrine Lysenkoism in the Stalinist Soviet Union Using not only scientific but also political and ideological arguments Lysenko achieved an official ban on Soviet Mendelian genetics Though the ban was brief and Lysenkoism as a leading biological doctrine was eventually deposed in favor of Mendelism Lysenkoism remains a paradigmatic example of pernicious political interference in science In this study the critical orientation for reading Lysenko s major speeches is constitutional rhetoric It combines Kenneth Burke s dialectic of constitutions and rhetoric of the subject Painting a nuanced picture of intellectual economic ideological and political life in the Soviet Union of the 1930s and 1940s the book demonstrates how the rhetorics of Lysenkoism and Mendelism interacted with Stalinist culture in the fight for dominating Soviet science The reader will learn how Lysenko s constitutional rhetoric created a space where scientific terms transformed into political and ideological ones and vice versa The book also shows how in a dialectical flip the Lysenkoist rhetoric eventually turned from tool to master Contrary to Lysenko s intentions his language gave his opponents Soviet Mendelians grounds on which to defend their science and criticize Lysenkoism Stanchevici forcefully reasserts the blurriness of the boundaries between science and politics and argues that scientific language reveals more plasticity and adaptability to the political situation than has hitherto been assumed Intended Audience Scholars in rhetoric history and philosophy of science graduate or upper division undergraduate course in the rhetoric of science or technical communication

This book is a philosophical exploration of the theoretical causes behind the collapse of classical cybernetics as well as the lesson that this episode can provide to current emergent technologies Alcibiades Malapi Nelson advances the idea that the cybernetic understanding of the nature of a machine entails ontological and epistemological consequences that created both material and theoretical conundrums However he proposes that given our current state of materials research scientific practices and research tools there might be a way for cybernetics to flourish this time

The book starts with a historical and theoretical articulation of cybernetics in order to proceed with a philosophical explanation of its collapse emphasizing the work of Alan Turing Ross Ashby and John von Neumann Subsequently Malapi Nelson unveils the common metaphysical signature shared between cybernetics and emergent technologies identifying this signature as transhumanist in nature Finally avenues of research that may allow these disruptive technologies to circumvent the cybernetic fate are indicated It is proposed that emerging technologies ultimately entail an affirmation of humanity      **International Encyclopedia of Human Geography** , 2009-07-16
