**High Precision X-Ray Measurements** Alessandro Scordo, 2019-08-26 Since their discovery in 1895 the detection of X rays has had a strong impact on and various applications in several fields of science and human life Impressive efforts have been made to develop new types of detectors and new techniques aiming to obtain higher precision both in terms of energy and position Depending on the applications solid state detectors microcalorimeters and various types of spectrometers currently serve as the best options for spectroscopic and imaging detectors Recent advancements in micron and meV precision have opened the door for groundbreaking applications in fundamental physics medical science astrophysics cultural heritage and several other fields The aim of this Special Issue is to compile an overview from different communities and research fields of the most recent developments in X ray detection and their possible impacts in various sectors such as in exotic atom measurements quantum physics studies XRF XES EXAFS plasma emission spectroscopy monochromators synchrotron radiation telescopes and space engineering All the papers included in this Special Issue contribute to emphasizing the importance of X ray detection in a very broad range of physics topics most of these topics are covered by the published works and several others are mentioned in the paper references providing an interesting and very useful synopsis from a variety of different communities and research fields of the most recent developments in X ray detection and their impact in fundamental research and societal applications

**Microbiological Advancements for Higher Altitude Agro-Ecosystems & Sustainability** Reeta Goel, Ravindra Soni, Deep Chandra Suyal, 2020-03-13 The book explores the challenges and opportunities associated with high altitude agro ecosystems and the factors that influence them It discusses the various indigenous agricultural practices and approaches as well as the microbiology of mountain hill agro ecosystems providing a comprehensive overview of the various factors that control the microbiome at high altitudes The contributions examine microbiological advances such as use of omics technologies for hill agriculture and environmental sustainability and explore the use of nanotechnology for agricultural and environmental sustainability at higher altitudes The book also describes various aspects of low temperature microbiology in the context of high altitude farming and environmental sustainability

Office of Scientific Information, **A Scientific Bibliography of the Far Northern Drakensberg** Rodney Moffett, 2023-04-14 This Scientific Bibliography of the Far Northern Drakensberg is a continuation by the Afromontane Research Unit of the University of the Free State ARU to document published and other similar works on the mountains of the summer rainfall area of South Africa It follows A Scientific Bibliography of the Drakensberg Maloti and Adjacent Lowlands which was published in 2020 Moffett 2020 and which covered the area between the North Eastern Cape and the North Eastern Free State The current work extends this northward by including articles and publications dating back to 1875 E Cohen on the Lydenburg goldfields reaching as far as the Wolkberg and Woodbush near Tzaneen in Limpopo Province Figure 1 shows the boundary of the area covered and although referred to as the Far Northern Drakensberg in this work it is identical to that described as the LMEE Limpopo Mpumalanga Eswatini Escarpment by Clarke et al 2022 Although slightly separate from the lower escarpment the mountainous Barberton and adjacent Eswatini area as well as the Leolo Mountains in eastern Sekhukhuneland are also included Details on how the boundary in figure 1 was determined are given in Clark et al 2022 Bibliographies on two further ranges in the summer rainfall area viz the Magaliesberg in Gauteng province and the Soutpansberg in Limpopo province are to be the subject of future compilations **Current Research and Development in Scientific Documentation** ,1965

*Theory Construction and Selection in Modern Physics* James T. Cushing, 1990 Analyses what criteria should determine how scientific theories are selected and justified **International Catalogue of Scientific Literature** ,1903 **Stripes and Related Phenomena** Antonio Bianconi, Naurang L. Saini, 2006-04-10 The problem of superconductors has been a central issue in Solid State Physics since 1987 After the discovery of superconductivity HTSC in doped perovskites it was realized that the HTSC appears in an unknown complex electronic phase of condensed matter In the early years all theories of HTSC were focused on the physics of a homogeneous 2D metal with large electron-electron correlations or on a 2D polaron gas Only after 1990 a novel paradigm started to grow where this 2D metallic phase is described as an inhomogeneous metal This was the outcome of several experimental evidences of phase separation at low doping Since 1992 a series of conferences on phase separation were organized to allow scientists to get together to discuss the phase separation and related issues Following the discovery by the Rome group in 1992 that the charges move freely mainly in one direction like the water running in the grooves in the corrugated iron foil a new scenario to understand superconductivity in the superconductors was open Because the charges move like rivers the physics of these materials shifts toward the physics of novel mesoscopic heterostructures and complex electronic solids Therefore understanding the striped phases in the perovskites not only provides an opportunity to understand the anomalous metallic state of cuprate superconductors but also suggests a way to design new materials of technological importance Indeed the stripes are becoming a field of general scientific interest

Lawrence and His Laboratory J. L. Heilbron, Robert W. Seidel, 2023-09-01 The Radiation Laboratory in Berkeley California

was the birthplace of particle accelerators radioisotopes and modern big science This first volume of its history is a saga of physics and finance in the Great Depression when a new kind of science was born Here we learn how Ernest Lawrence used local and national technological economic and manpower resources to build the cyclotron which enabled scientists to produce high voltage particles without high voltages The cyclotron brought Lawrence forcibly and permanently to the attention of leaders of international physics in Brussels at the Solvay Congress of 1933 Ever since the Rad Lab has played a prominent part on the world stage The book tells of the birth of nuclear chemistry and nuclear medicine in the Laboratory the discoveries of new isotopes and the transuranic elements the construction of the ultimate cyclotron Lawrence s Nobel Prize and the energy enthusiasm and enterprise of Laboratory staff Two more volumes are planned to carry the story through the Second World War the establishment of the system of national laboratories and the loss of Berkeley s dominance of high energy physics The Radiation Laboratory in Berkeley California was the birthplace of particle accelerators radioisotopes and modern big science This first volume of its history is a saga of physics and finance in the Great Depression when a new kind of science was

*Diverse Topics in Theoretical and Mathematical Physics* Roman W. Jackiw, 1995 In this volume topics are drawn from field theory especially gauge field theory as applied to particle condensed matter and gravitational physics and concern a variety of interesting subjects These include geometrical topological effects in quantum theory fractional charge time travel relativistic quantized fields in and out of thermal equilibrium and quantum modifications of symmetry in physical systems Many readers will find this a useful volume especially theoretical physicists and mathematicians The material will be of interest to both the expert who will find well presented novel and stimulating viewpoints of various subjects and the novice who will find complete detailed and precise descriptions of important topics of current interest in theoretical and mathematical physics
