Seed Production:

Seed Production Miller F. McDonald, Lawrence O. Copeland, 2012-12-06 Plant breeders continue to make significant advances in developing high yielding adaptable disease free crops These advances however are not realized until an efficient seed production system is in place that rapidly increases genetically superior crops and makes them available to the consumer in large quantities at a reasonable cost Successful seed production requires seed to be genetically pure free of admixtures and able to establish rapidly a uniform stand Seed production is a complex process Rigorous production criteria are followed by both seed producer and seed companies to ensure that high quality seed is produced and marketed These criteria become even more stringent in hybrid seed production This volume identifies the factors most critical in a successful seed production operation The fundamental considerations common to all seed crops are established in Part I Principles of Seed Production From this foundation the practices of seed production are provided in detail in Part II Seed Production of Specific Crops

Heterosis and Hybrid Seed Production in Agronomic Crops Amarjit Basra, 2024-11-01 Heterosis and Hybrid Seed Production in Agronomic Crops discusses how heterosis or hybrid vigor has played a major role in improving crop productivity and quality in order to feed the ever increasing human population particularly in developing countries Plant breeders agronomists seed producers and farmers

will discover why the development of hybrids in the world's major food crops and why the methods of hybrid seed production are critical for achieving this goal. This landmark book deals with heterosis and hybrid seed production of major agronomic crops such as wheat, rice, maize, sorghum, cotton, sunflower, and rapeseed. Through *Heterosis and Hybrid Seed Production in Agronomic Crops*, you will discover valuable information on hybrid seed production methods that is not available in any other single volume. This unique book contains relevant and essential information about important procedures to help increase crop yield, including methods for deriving second cycle inbred lines for hybrid maize, possibilities for hybrid seed production in wheat, techniques of hybrid sorghum seed production, production of hybrid seeds using male sterile lines of cotton, agronomic management in seed production plots of sunflower, seed production technology of hybrid rapeseed, advances in hybrid seed production technology of rice in China. *Heterosis and Hybrid Seed Production in Agronomic Crops* gives you a global perspective on essential food crops in all parts of the world. This informative guide will help you use hybrid seed production methods with important agricultural crops and increase the quality of these vital and essential food sources.

Bacillus thuringiensis (Bt) cotton seed production in North-Eastern Karnataka: An economic analysis Veerabhadrapa Bellundagi, Hamsa K.R., Prem Jose Vazhacharickal, Karnataka is one of the nine major Bt cotton growing states in the country. The Bt cotton seed production focussed on the socio-economic characteristics of contract farmers, cost and return, efficiency of resource use, and problems faced by the farmers in Bt cotton seed production under different companies. Five companies having highest area under Bt cotton seed production were selected for study. The present study was conducted with primary data collected entirely based on a multistage random sampling technique from 200 Bt cotton seed production growers who have contracted with the different seed companies. The study pertained to the agricultural year 2012-13. The total cost of Bt cotton seed production varied from one company contract farmers to other company contract farmers. The total cost was found to be higher Rs 96829 in case of JK seeds company contract farmers followed by the farmers who have contracted with Monsanto seeds company Rs 95797. While the net returns obtained from Bt cotton seed production was found to be higher in case of Monsanto seeds company contract farmers Rs 46387 followed by Kaveri seeds company contract farmers Rs 33076. The Cobb-Douglas production function revealed that the farmers who have contracted with different seed companies, the use of seed was found to be optimum across all company contract farmers. Whereas fertilizer resource was over-utilized by farmers who have contracted with various companies. Non-availability of trained labour and prevalence of high wage rate were the major constraints in case of production, whereas poor technical assistance and low contract price were the contractual problems. The other problems regarding plant protection, high incidence of diseases, was the major constraint in Bt cotton seed production and in case of marketing, high price of parents of Bt cotton seeds and low price of the seeds offered by the agencies were the major ones. Therefore, the Bt cotton seed production technology had positive impact on socio-economic status of farmers by increase in yield and reducing cost on inputs, thereby increase in income and also standard of
