1. INTRODUCTION

The European-Mediterranean Seismic Hazard Map (EMSH) is a product of the European Seismological Commission (ESC) and the International Geological Correlation Program (IGC) Project 382: SESAME. The map was developed by a team of experts from various countries, including Italy, Spain, and Germany. The map shows the seismic hazard across the European-Mediterranean region, including the Alps, the Italian Peninsula, and the Balkans. The map is based on a detailed analysis of seismic data and geological information. The map is presented in a color scale from blue (low hazard) to red (high hazard). The map includes a grid of latitude and longitude lines. A scale bar is located at the bottom left of the map area.

2. DATA SOURCES

The data sources for the map include seismic data from the European Seismological Commission (ESC) and the International Geological Correlation Program (IGC) Project 382: SESAME. The data also includes geological information from various sources, including the European Geoscientific Cooperative Programme (EGCP) and the International Geophysical Year (IGY).

3. METHODOLOGY

The methodology used for the map is based on the European Seismological Commission (ESC) and the International Geological Correlation Program (IGC) Project 382: SESAME. The methodology involves a detailed analysis of seismic data and geological information. The map is presented in a color scale from blue (low hazard) to red (high hazard). The map includes a grid of latitude and longitude lines. A scale bar is located at the bottom left of the map area.

4. RESULTS

The results of the map show the seismic hazard across the European-Mediterranean region. The map is based on a detailed analysis of seismic data and geological information. The map is presented in a color scale from blue (low hazard) to red (high hazard). The map includes a grid of latitude and longitude lines. A scale bar is located at the bottom left of the map area.

5. CONCLUSIONS

emerged was how did local populations prepare their dwellings to face frequent earthquakes It was to respond to this gap in knowledge that the SEISMIC V research project was instigated and this interdisciplinary international publication was prepared The research revealed the existence of a local seismic culture in terms of reactive or preventive seismic resistant measures able to survive if properly maintained in areas with frequent earthquakes The fundamental contribution and aims of the publication were to enhance The disciplinary interest in vernacular architecture Its contribution to risk mitigation in responding to natural hazards To encourage academic and scientific research collaboration among different disciplines To contribute to the improvement of vernacular dwellings which half of the world s population still inhabits nowadays Fifty international researchers and experts presented case studies from Latin America the Mediterranean Eastern and Central Asia and the Himalayas region with reference to 20 countries i e Algeria Bolivia Bhutan Chile China Egypt El Salvador Greece Haiti Italy Japan Mexico Morocco Nepal Nicaragua Peru Romania Taiwan Turkey and a closer detailed analysis of Portugal This publication brings together 43 contributions with new perspectives on seismic retrofitting techniques and relevant data addressing vernacular architecture an amazing source of knowledge and to this day home to 4 billion people
