Seismic Rehabilitation Of Buildings Strategic Plan 2005:

Seismic Rehabilitation of Buildings Ugo Morelli, 1999-11 Provides the Federal Emergency Management Agency's Mitigation Directorate with 25 recommended tasks that should be undertaken through the agency's Existing Buildings Program EBP in the coming years The EBP's expanded but continuing mission in seismic rehabilitation is to limit fatalities life threatening injuries property economic losses from earthquakes by increasing the number of seismically resistant buildings in all areas of identified earthquake risk Identifies 4 objectives 25 tasks to help make our building stock less vulnerable to earthquake damage Seeks to provide the continuity necessary for an effective Existing Buildings Program

Seismic Rehabilitation of Buildings, 1998 **Catalog of FEMA Earthquake Resources** United States. Federal Emergency Management Agency, 2013 **FEMA Publications Catalog** United States. Federal Emergency Management Agency, 2001 Rapid Visual Screening of Buildings for Potential Seismic Hazards: A Handbook Federal Emergency Agency, U. S. Department Security, 2013-04-03 This FEMA 154 Report Rapid Visual Screening of Buildings for Potential Seismic Hazards A Handbook is the first of a two volume publication on a recommended methodology for rapid visual screening of buildings for potential seismic hazards The technical basis for the methodology including the scoring system and its development are contained in the companion FEMA 155 report Rapid Visual Screening of Buildings for Potential Seismic Hazards Supporting Documentation The rapid visual screening procedure RVS has been developed for a broad audience including building officials and inspectors and government agency and private sector building owners to identify inventory and rank buildings that are potentially seismically hazardous Although RVS is applicable to all buildings its principal purpose is to identify 1 older buildings designed and constructed before the adoption of adequate seismic design and detailing requirements 2 buildings on soft or poor soils or 3 buildings having performance characteristics that negatively influence their seismic response Once identified as potentially hazardous such buildings should be further evaluated by a design professional experienced in seismic design to determine if in fact they are seismically hazardous The RVS uses a methodology based on a sidewalk survey of a building and a Data Collection Form which the person conducting the survey hereafter referred to as the screener completes based on visual observation of the building from the exterior and if possible the interior The Data Collection Form includes space for documenting building identification information including its use and size a photograph of the building sketches and documentation of pertinent data related to seismic performance including the development of a numeric seismic hazard score Once the decision to conduct rapid visual screening for a community or group of buildings has been made by the RVS authority the screening effort can be expedited by pre planning including the training of screeners and careful overall management of the process Completion of the Data Collection Form in the field begins with identifying the primary structural lateral load resisting system and structural materials of the building Basic Structural Hazard Scores for various building types are provided on the form and the screener circles the appropriate one

For many buildings viewed only from the exterior this important decision requires the screener to be trained and experienced in building construction. The procedure presented in this Handbook is meant to be the preliminary screening phase of a multi phase procedure for identifying potentially hazardous buildings. Buildings identified by this procedure must be analyzed in more detail by an experienced seismic design professional. Because rapid visual screening is designed to be performed from the street with interior inspection not always possible hazardous details will not always be visible and seismically hazardous buildings may not be identified as such. Conversely buildings initially identified as potentially hazardous by RVS may prove to be adequate. Risk Management Series: Designing for Earthquakes - A Manual for Architects Federal Emergency

Agency, U. S. Department of Security, 2013-04-14 Earthquakes in the United States are regional in their occurrence and while California is famous for its earthquake other states such as Texas have much less concern for the threat of temblors. However architectural practice is becoming increasingly national and global and the architect in Texas may find that the next project is in California. Thus it has become necessary for the professional architect to have some knowledge of the earthquake problem and how design seeks to control it. *Designing for Earthquakes a Manual for Architects* is intended to explain the principles of seismic design for those without a technical background in engineering and seismology. The primary intended audience is that of architects and includes practicing architects architectural students and faculty in architectural schools who teach structures and seismic design. For this reason the text and graphics are focused on those aspects of seismic design that are important for the architect to know. Because of its non technical approach this publication will also be useful to anyone who has an interest and concern for the seismic protection of buildings including facility managers building owners and tenants building committee participants emergency service personnel and building officials. Engineers and engineering students will also gain from this discussion of seismic design from an architectural viewpoint. The principles discussed are applicable to a wide range of building types both new and existing. The focus is on buildings that are designed by a team that includes architects engineers and other consultants. *National Earthquake Hazards Reduction Program Reauthorization*

Congress. House. Committee on Science. Subcommittee on Research, 2001 **Performance-Based Seismic Engineering: Vision for an Earthquake Resilient Society** Matej Fischinger, 2014-07-15 The Bled workshops have traditionally produced reference documents providing visions for the future development of earthquake engineering as foreseen by leading researchers in the field The participants of the 2011 workshop built on the tradition of these events initiated by Professors Fajfar and Krawinkler to honor their important research contributions and have now produced a book providing answers to crucial questions in today's earthquake engineering What visible changes in the design practice have been brought about by performance based seismic engineering What are the critical needs for future advances What actions should be taken to respond to those needs The key answer is that research interests should go beyond the narrow technical aspects and that the seismic resilience of society as a whole should become an essential part of the planning and design process The book aims to provide essential guidelines for researchers professionals and students in the field of earthquake engineering It will also be of particular interest for all those working at insurance companies governmental civil protection and emergency management agencies that are responsible for assessing and planning community resilience The introductory chapter of the book is based on the keynote presentation given at the workshop by the late Professor Helmut Krawinkler As such the book includes Helmut's last and priceless address to the engineering community together with his vision and advice for the future development of performance based design earthquake engineering and seismic risk management **Administrative Notes** , 2000 Department of the Interior and
