Krebs,1999-02-28 The evolution of science through the ages has often been marred by people s misconceptions From pre historic times when myths played a major role in people s lives to present day debates concerning the environment people have sought ways to explain the world around them and have often come up with incorrect answers Science has grown through the correction of these misconceptions This unique reference source can be used by students teachers and other interested researchers to explore this growth as it pertains to both the field of science and the process of scientific experimentation Readers will discover how misunderstandings led to further experimentation and eventually to scientific facts These false paths to scientific knowledge are not treated as deliberate misconduct but rather as a lack of knowledge and a misunderstanding of the science and technology involved both of which were sooner or later corrected by men and women of science Krebs explores the conception and development of scientific thought in five different fields Medicine and Health Life Science Chemistry and Physics Astrology Astronomy and Cosmology and Conservation Ecology and Environmentalism Within each of these categories he explores more specific areas such as the circulatory system geology and inner planets This arrangement provides easy access for the researcher interested in a particular area of science as well as those looking for general information illuminating how our modern understanding of science is based on much of the developments in our ancient past *The First Fossil Hunters* Adrienne Mayor,2023-04-11 Griffins Cyclopes Monsters and

Giants these fabulous creatures of classical mythology continue to live in the modern imagination through the vivid accounts of the ancient Greeks and Romans But what if these beings were more than fictions This is the arresting and original idea that Adrienne Mayor explores in *The First Fossil Hunters* Through careful research and documentation she shows that many of the giants and monsters of myth did have a basis in fact in ancient people s discoveries of the enormous bones of long extinct dinosaurs mastodons and other animals that were once abundant in the lands of the Greeks and Romans Is Science Multicultural? Sandra Harding,1998-02-22 Explores what the last few decades of European American feminist and postcolonial science and technology studies can learn from each other This book proposes new directions for thinking about objectivity method and reflexivity in light of the new understandings developed in the post World War II world
