Turner, Luiz D. de Lacerda, O. Vasiliev, Wim Salomons, 2013-11-11 Mercury is outstanding among the global environmental pollutants of continuing concern Especially in the last decade of the 20 century environmental scientists legislators politicians and the public have become more aware of mercury pollution in the global environment It has often been suggested that anthropogenic emissions are leading to a general increase in mercury on local regional and global scales Numerous industrial activities including the mining of gold silver and mercury itself have caused mercury contamination of terrestrial and aquatic ecosystems Mercury contaminated sites are abundant worldwide Mercury has been accumulated as an industrial legacy in the rocks soils and sediments at and adjacent to industrial sites and now may pose significant risks to human and ecological health Direct inputs of mercury into the environment by industrial activities have generally decreased significantly in the Western world over the past three decades However sources such as coal combustion and the use of mercury in gold and silver mining continue to be of importance on a global scale The same is true for diffuse sources such as terrestrial landscapes that have been impacted by mercury inputs from the atmosphere in the past Soils and vegetation located close to large atmospheric mercury sources have clearly been sinks while these sources were active in the past In the long run however these soils may have become important diffuse area sources after the original emissions were discontinued **Landscapes of Inequity** Nicholas A. Robins, Barbara J. Fraser, 2020-07-01 The natural wealth of the Amazon and Andes has long attracted fortune seekers from explorers farmers and gold panners to multimillion dollar mining oil and gas and timber operations Modern demands for commodities have given rise to new development schemes including hydroelectric dams open cast mines and industrial agricultural operations The history of human habitation in this region is intimately tied to its rich biodiversity and the Amazon basin is home to scores of indigenous groups many of whom have populations so small that their cultural and physical survival is endangered Landscapes of Inequity explores the debate over rights to and use of resources and addresses fundamental questions that inform the debate in the western Amazon basin from the Andes Mountains to the tropical lowlands Beginning with an examination of the divergent conceptual interpretations of environmental justice the volume explores the issue from two interlocking perspectives of indigenous peoples and of economic development in a global economy The volume concludes by examining the efficacy of laws and policies concerning the environment in the region the viability and range of judicial recourse and future directions in the field of environmental justice Chemistry and Ecotoxicology of Pollution Des W. Connell, Gregory J. Miller, 1984-03-20 Pollution and its control are now one of the most serious problems in environmental management affecting localized areas regions and increasingly the entire ecosphere Chemistry and Ecotoxicology of Pollution provides a basic understanding of the chemical

toxicological and ecological factors involved when major classes of pollutants act on natural systems The nature and effects of these pollutants are examined from the primary level of their sources and chemical properties through their interactions in the environment to their ultimate ecological effects on organisms and ecosystems Pollutants are divided into groups with similar properties and then the chemistry and ecotoxicology of each group is defined More importantly in collating and evaluating available information on pollution processes the book develops unifying theories on the fundamental chemical and ecological nature of pollution processes The book uses a conceptual framework to evaluate the impact of pollutants on the components and functions of natural ecosystems It is based on the chemical and physical properties of a pollutant its environmental behavior and fate exposure to and toxic effects on organisms their populations communities and responses of affected ecosystems This sequence can be applied to known potential and emerging pollutants of concern As government initiatives for the control of chemicals take greater effects pollution research particularly in ecotoxicology will be further developed Chemistry and Ecotoxicology of Pollution helps play an important role in determining the future direction of research activities in environmental management and pollution control on a worldwide scale It is a basic resource for students e g environmental chemistry ecology land and water management environmental or public health environmental engineering and sustainability science scientists researchers policy makers and professionals in need of a clear understanding of the nature and effects of environmental pollution from an ecological perspective

Santa Bárbara's Legacy Nicholas A. Robins, 2017-04-24 In Santa Bárbara's Legacy An Environmental History of Huancavelica Peru Nicholas A Robins presents the first comprehensive environmental history of a mercury producing region in Latin America Tracing the origins rise and decline of the regional population and economy from pre history to the present Robins explores how people's multifaceted intimate and often toxic relationship with their environment has resulted in Huancavelica being among the most mercury contaminated urban areas on earth The narrative highlights issues of environmental justice and the toxic burdens that contemporary residents confront especially many of those who live in adobe homes and are exposed to mercury as well as lead and arsenic on a daily basis The work incorporates archival and printed primary sources as well as scientific research led by the author

Slow Death by Rubber Duck Rick Smith, Bruce Lourie, 2010 Funny thought provoking and incredibly disturbing *Slow Death by Rubber Duck* reveals that just the living of daily life creates a chemical soup inside each of us Pollution is no longer just about belching smokestacks and ugly sewer pipes now it's personal The most dangerous pollution has always come from commonplace items in our homes and workplaces Smith and Lourie ingested and inhaled a host of things that surround all of us all the time This book exposes the extent to which we are poisoned every day of our lives For this book over the period of a week the kind of week that would be

familiar to most people the authors use their own bodies as the reference point and tell the story of pollution in our modern world the miscreant corporate giants who manufacture the toxins the weak kneed government officials who let it happen and the effects on people and families across the globe Parents and concerned citizens will have to read this book Key concerns raised in *Slow Death by Rubber Duck* Flame retardant chemicals from electronics and household dust polluting our blood Toxins in our urine caused by leaching from plastics and run of the mill shampoos toothpastes and deodorant Mercury in our blood from eating tuna The chemicals that build up in our body when carpets and upholstery off gas Ultimately hopeful the book empowers readers with some simple ideas for protecting themselves and their families and changing things for the better From the Hardcover edition [Advances in Organometallic Chemistry](#) ,1982-08-11

Advances in Organometallic Chemistry **Diagnosis** Jane Marie Hightower,2013-02-22 One morning in 2000 Dr Jane Hightower walked into her exam room to find a patient with disturbing symptoms she couldn't explain The woman was nauseated tired and had difficulty concentrating but a litany of tests revealed no apparent cause She was not alone Dr Hightower saw numerous patients with similar inexplicable ailments and eventually learned that there were many more around the nation and the world They had little in common except a healthy appetite for certain fish Dr Hightower's quest for answers led her to mercury a poison that has been plaguing victims for centuries and is now showing up in seafood But this explanation opened a Pandora's Box of thornier questions Why did some fish from supermarkets and restaurants contain such high levels of a powerful poison Why did the FDA base its recommendations for safe mercury consumption on data supplied by Saddam Hussein's Ba'athist extremists And why wasn't the government warning its citizens In *Diagnosis Mercury* Dr Hightower retraces her investigation into the modern prevalence of mercury poisoning revealing how political calculations dubious studies and industry lobbyists endanger our health While mercury is a naturally occurring element she learns there's much that is unnatural about this poison's prevalence in our seafood Mercury is pumped into the air by coal fired power plants and settles in our rivers and oceans and has been dumped into our waterways by industry It accumulates in the fish we eat and ultimately in our own bodies Yet government agencies and lawmakers have been slow to regulate pollution or even alert consumers Why The trail of evidence leads to Canada Japan Iraq and various U.S. institutions and as Dr Hightower puts the pieces together she discovers questionable connections between ostensibly objective researchers and industries that fear regulation and bad press Her tenacious inquiry sheds light on a system in which too often money trumps good science and responsible government Exposing a threat that few recognize but that touches many *Diagnosis Mercury* should be required reading for everyone who cares about their health

Essentials of Medical Geology Olle Selinus,2013-03-30 *Essentials of Medical Geology* reviews the essential concepts and practical tools required to tackle environmental and public health problems It is organized into four main sections The first section deals with the fundamentals of environmental biology the natural and anthropogenic sources of health elements that impact health and illustrate key biogeochemical transformations

The second section looks at the geological processes influencing human exposure to specific elements such as radon arsenic fluorine selenium and iodine The third section presents the concepts and techniques of pathology toxicology and epidemiology that underpin investigations into the human health effects of exposure to naturally occurring elements The last section provides a toolbox of analytical approaches to environmental research and medical geology investigations Essentials of Medical Geology was first published in 2005 and has since won three prestigious rewards The book has been recognized as a key book in both medical and geology fields and is widely used as textbook and reference book in these fields For this revised edition editors and authors have updated the content that evolved a lot during 2005 and added two new chapters on public health and agriculture and health This updated volume can now continue to be used as a textbook and reference book for all who are interested in this important topic and its impacts the health and wellbeing of many millions of people all over the world Addresses key topics at the intersection of environmental science and human health Developed by 60 international experts from 20 countries and edited by professionals from the International Medical Geology Association IMGA Written in non technical language for a broad spectrum of readers ranging from students and professional researchers to policymakers and the general public Includes color illustrations throughout references for further investigation and other aids to the reader

Mercury Hazards to Living Organisms Ronald Eisler, 2006-03-14 Complex and ever changing in its forms and functions the element mercury follows a convoluted course through the environment and up the food chain The process is complicated further by the fact that the difference between tolerable natural background levels and harmful effects in the environment is exceptionally small and still not completely understood

Mining and Quarrying in the Ancient Andes Nicholas Tripcevich, Kevin J. Vaughn, 2012-12-09 Over the millennia from stone tools among early foragers to clays to prized metals and mineral pigments used by later groups mineral resources have had a pronounced role in the Andean world Archaeologists have used a variety of analytical techniques on the materials that ancient peoples procured from the earth What these materials all have in common is that they originated in a mine or quarry Despite their importance comparative analysis between these archaeological sites and features has been exceptionally rare and even more so for the Andes Mining and Quarrying in the Ancient Andes focuses on archaeological research at primary deposits of minerals extracted through mining or quarrying in the Andean region While mining often begins with an economic need it has important social political and ritual dimensions as well The contributions in this volume place evidence of primary extraction activities within the larger cultural context in which they occurred This important contribution to the interdisciplinary literature presents research and analysis on the mining and quarrying of various materials throughout the region and through time Thus rather than focusing on one material type or one specific site Mining and Quarrying in the Ancient Andes incorporates a variety of all the aspects of mining by focusing on the physical social and ritual aspects of procuring materials from the earth in the Andean past

Anthropogenic Compounds , 2013-11-09 Environmental Chemistry is a relatively young science Interest in

this subject however is growing very rapidly and although no agreement has been reached as yet about the exact content and limits of this interdisciplinary discipline there appears to be increasing interest in seeing environmental topics which are based on chemistry embodied in this subject One of the first objectives of Environmental Chemistry must be the study of the environment and of natural chemical processes which occur in the environment A major purpose of this series on Environmental Chemistry therefore is to present a reasonably uniform view of various aspects of the chemistry of the environment and chemical reactions occurring in the environment The industrial activities of man have given a new dimension to Environmental Chemistry We have now synthesized and described over five million chemical compounds and chemical industry produces about hundred and fifty million tons of synthetic chemicals annually We ship billions of tons of oil per year and through mining operations and other geophysical modifications large quantities of inorganic and organic materials are released from their natural deposits Cities and metropolitan areas of up to 15 million inhabitants produce large quantities of waste in relatively small and confined areas Much of the chemical products and waste products of modern society are released into the environment either during production storage transport use or ultimate disposal These released materials participate in natural cycles and reactions and frequently lead to interference and disturbance of natural systems

Accounting for Resources, 2 Robert U. Ayres, Leslie Ayres, Leslie W. Ayres, 1999-11-25 The book also includes a longitudinal study of heavy metals use and dissipation during the period 1880-1980 with reference to the Hudson River basin It concludes with an overview including some recommendations for future research and for policy changes with respect to government statistical data collection and organization

Developmental Neurotoxicology Research Cheng Wang, William Slikker, Jr, 2011-04-12 This book describes how systems biology pharmacogenomic and behavioral approaches as applied to neurodevelopmental toxicology provide a structure to arrange information in a biological model Authors review and discuss approaches that can be used as effective tools to dissect mechanisms underlying pharmacological and toxicological phenomena associated with the exposure to drugs or environmental toxicants during development This book presents cross cutting research tools and animal models along with applications to the studies associated with potential anesthetic induced developmental neurotoxicity the developmental basis of adolescent or adult onset of disease risk assessment of methyl mercury and its effects on neurodevelopment challenges in the field to identify environmental factors of relevance to autism and the strategy and progress of epilepsy research

Trace Elements in Terrestrial Environments Domy C. Adriano, 2013-03-19 Knowledge is not to be sought for the pleasures of the mind or for contention or for superiority to others or for profit or fame or power or any of these inferior things but for the benefit and use of life Sir Francis Bacon Based on citations in the literature it is evident the first edition entitled Trace Elements in the Terrestrial Environment 1986 met its primary objective

which was to provide students and professionals with a comprehensive book in many important aspects of trace elements in the environment. Indeed, the extent of its use has exceeded my expectations. As a result of its usefulness and encouragement by colleagues in the field, I was compelled to write this edition following a similar format but including new chapters on biogeochemistry, bioavailability, environmental pollution and regulation, ecological and human health effects and risk and risk management, and expanding the coverage to include freshwater systems and groundwater where appropriate. In addition to plants, which was the main biota of emphasis in the earlier edition, fish and wildlife and invertebrates, both terrestrial and aquatic, are discussed as necessary. The ecological and human health effects of major environmental contaminants such as As, Cd, Cr, Pb, and Hg are also highlighted along with relevant information on potential risks to the ecology and human health.

Animal Horror Cinema Katarina Gregersdotter, Johan Höglund, Nicklas Hållén, 2016-02-22. This first full-length scholarly study about animal horror cinema defines the popular subgenre and describes its origin and history in the West. The chapters explore a variety of animal horror films from a number of different perspectives. This is an indispensable study for students and scholars of cinema horror and animal studies.
