Merging Traffic The Consolidation Of The International Automobile Industry:

Merging Traffic John A. C. Conybeare, 2004 John Conybeare examines the motivations at work behind the consolidation of the automotive industry worldwide into six giant conglomerates He shows that the publicly anticipated goals are not always achieved and reveals that the real reasons behind mergers are not always what they seem to be The Long March to Capitalism A. D'Costa, 2005-06-14 The author captures the evolution of Indian industrial capitalism by extending the models of capitalism and regulation framework Using principally the auto industry and anchoring the analysis to the expansion of markets he demonstrates that the Indian state and businesses have been important institutions for creating markets He acknowledges significant market growth but also underscores several contradictions arising from such capitalist development There is a wealth of data which scholars policymakers and businesses will find very useful **Globalization** Ashish Vaidya, 2005-12-19 This work is a comprehensive collection of cutting edge scholarship on the economic international business political legal and environmental ramifications of globalization one of the hottest topics of the day International trade is as old as nations During the last five decades however advances in technology and transportation have changed the scope and method of international trade Disputes rage about the effects of these changes advocates for different positions offer argument but little factual or theoretical analysis Globalization offers all the information readers need to sort out the arguments Written with the highest degree of scholarship intended for college students or working professionals the encyclopedia provides both introductory material to broad economic legal political and environmental theory and in depth analysis of how theory interacts with practice in the framework of global trade A trader in New York can in a matter of seconds execute a billion dollar currency transaction in Hong Kong What does this transaction mean to New Yorkers to residents of Hong Kong and to the rest of the world This book gives readers the tools to answer those questions **A Successful Transformation?** Petr Pavlínek, 2008-04-30 I started researching the dramatic changes in the automobile industry of Central and East European countries in the late 1990s My interest grew out of my previous work on the post socialist transformation foreign direct investment and regional economic development While researching the economic and regional development effects of foreign direct investment I was increasingly drawn to the automobile industry because of the speed and depth of its transformation through foreign direct investment and its potentially very significant economic and regional development effects In addition to working on the Central and East European automobile industry as a whole I became interested in detailed case studies of enterprise restructuring as I wanted to understand its complex nature and the role of different actors in the restructuring of the automobile industry In order to achieve this goal I visited dozens of automotive enterprises especially in the Czech Republic Czechia to conduct in depth interviews with key informants I have also interviewed key informants at ministries automotive associations and academia and collected various secondary data and information This book is the outcome of this work In this endeavor I have benefited from various support The University

Committee on Research and Creative Activity at the University of Nebraska at Omaha funded three field work sessions in Czechia to conduct interviews and research for this book

Energy, the Modern State, and the American World System George A. Gonzalez, 2018-03-01 In this provocative and original study George A Gonzalez argues that the relationship between energy and the state as well as global politics has become more and more deeply intertwined reaching something of a crescendo with the global hegemony of Pax Americana in the twentieth and early twenty first centuries He presents a clear and concise case for viewing the modern state as the collaborative and affirmative union of capitalism and political authority in a setting where energy resources be it wind coal or oil provide the basis for the relatively inexpensive projection of political power More broadly energy serves as the foundation of the modern economy and because of this a prime function of the modern state is ensuring access to cheap reliable sources to power and grow the economy Historically energy is more of a zero sum resource than capital markets labor or technology and thus is a greater source of geopolitical tension and violence Energy politics and by extension international politics is moreover shaped by domestic corporate elites especially those within the United States

Competitiveness and Death Gary Winslett, 2021-03-09 Competitiveness and Death examines the increase and reduction of regulatory barriers to trade across three industries environmental labor and safety rules on automobiles consumer protection regulations on meat and intellectual property regulations on medicines The fundamental negotiation in trade and regulatory policymaking occurs between businesses activists and government officials Gary Winslett builds on new trade theories to explain when and why businesses are most likely to lobby governments to reduce these regulatory trade barriers He argues that businesses prevail when they can connect with broader concerns about national economic competitiveness He examines how activist organizations overcome collective action problems and defend regulatory differences arguing that they succeed when they can link their desire for barriers with preventing needless death Competitiveness and Death provides a political companion to new trade theories in economics questioning cleavage based explanations of trade politics demonstrating the underappreciated importance of activists suggesting the limits of globalization providing in depth examination of previously ignored trade negotiations qualifying the California Effect the shift toward stricter regulatory standards and showing the relative rarity of regulations used as disguised protectionism

Trade and Structural Adjustment Embracing Globalisation OECD, 2005-09-21 Trade and Structural Adjustment Embracing Globalisation identifies the requirements for successful reallocation of labour and capital to more efficient uses in response to the emergence of new sources of competition technological change and shifting consumer preferences

Confronting Global Neoliberalism Patrick Bond, Paul Clooney, 2011-02-28 With the world's attention fixed on the travails of leading global economies due to a still unfolding financial crisis of gigantic proportions there has been a studied silence on the fate of the third world as the malaise increasingly impacts it This silence is particularly disturbing because questions of potential pitfalls in the neoliberal policy package which the third world unlike Western Europe and Japan was

largely forced to adopt were never countenanced as One third world state after another discovered that international institutions were in effect hostile to their governments if they chose alternative developmental models or otherwise resisted the neoliberal triage of liberalization privatization and deregulation This collection is a tour de force effectively countering not only the neoliberal ideology of development as a whole but the marginalizing within today s mainstream crisis discourse of any discussion of the monstrous misallocation of global resources wrought by the so called Washington Consensus and the suffering and destruction it has wreaked on third world peoples and economies This edited volume is intended as both a textbook for introductory classes in global development or area studies and as a conduit for advanced students policymakers NGO activists and an educated readership to gain knowledge about the socio economic conditions existing across much of the world we live in and the policies that brought them about The specially commissioned and peer reviewed chapters are written by experts in the fields of economics politics sociology and international studies Chapter authors hail from around the world including Brazil Mexico Canada United States United Kingdom South Africa South Korea and Thailand The countries regions neoliberal experience and potential futures covered in this book are Brazil China Cuba Egypt Mexico Southeast Asia Indonesia Malaysia and Vietnam South Africa South Korea Syria Thailand and Venezuela

Energy and Empire George A. Gonzalez, 2012-09-07 What set the United States on the path to developing commercial nuclear energy in the 1950s and what led to the seeming demise of that industry in the late 1970s Why in spite of the depletion of fossil fuels and the obvious dangers of global warming has the United States moved so slowly toward adopting alternatives In *Energy and Empire* George A Gonzalez presents a clear and concise argument demonstrating that economic elites tied their advocacy of the nuclear energy option to post 1945 American foreign policy goals At the same time these elites opposed government support for other forms of energy such as solar that cannot be dominated by one nation While researchers have blamed safety concerns and other factors as helping to arrest the expansion of domestic nuclear power plant construction Gonzalez points to an entirely different set of motivations stemming from the loss of America s domination control of the enrichment of nuclear fuel Once foreign countries could enrich their own fuel civilian nuclear power ceased to be a lever the United States could use to economically politically dominate other nations Instead it became a major concern relating to nuclear weapons proliferation

American Empire and the Canadian Oil Sands George A. Gonzalez, 2016-04-08 Throughout the US oil and gas shale are being hydrofracked to produce petroleum and natural gas Oil or tar sands from Canada is being processed thereby generating large amounts of crude This book places the unconventional fossil fuels revolution that is taking place in North America within the context of great power politics

[Marxist Perspectives on South Korea in the Global Economy](#) Martin Hart-Landsberg, Seongjin Jeong, Westra Richard, 2017-03-02 This volume brings together work by international scholars to provide a unique analysis of the past present and possible future trajectory of Korea s political economy from a distinctly Marxist perspective The volume differentiates the Marxian approach to the political economy of Korean development from

the Keynesian social democratic approach that currently dominates the critical literature In doing so the volume provides a unique view of the development of the South Korean Economy *Models, Numbers, and Cases* Detlef F. Sprinz, Yael Wolinsky-Nahmias, 2004 Publisher Description Energy and the Politics of the North Atlantic George A.

Gonzalez, 2013-06-20 Since the onset of the Second Industrial Revolution in the second half of the nineteenth century energy has become a key axis of politics and international relations particularly for the United States and Western Europe In *Energy and the Politics of the North Atlantic* George A. Gonzalez documents how the United States thanks to its copious reserves of oil coal and natural gas was able to assume a dominant position in the world system by the 1920s This energy economic imbalance was an important causal factor underlying the eruption of World War II After 1945 and in the context of the Cold War with communism the United States used its access to both fossil fuels and nuclear power as a means to defeat the Soviet Union and its allies Driving American foreign policy Gonzalez argues is a domestic system of urban sprawl based on the automobile and the energy reserves necessary to maintain it The massive consumer demand created by urban sprawl underpins US foreign policy in the Middle East while concerns over access to energy drive the European Union project

Political Economy and Globalization Richard Westra, 2009-09-30 Based upon distinguishing capitalism from other economic systems as well as analysis of capitalist change across its stages of development Richard Westra argues that the economic tendencies we refer to as globalization constitute a world historic transition away from capitalism Westra forcefully rejects claims from both Right and Left sides of economic debate that globalization embodies the ultimate world diffusion of capitalism He concludes that the choice facing humanity is no longer between capitalism and socialism but between socialism and global barbarism The argument is meticulously interwoven through four key foci of political economy The role of Marx's Capital in producing knowledge of capitalism The periodizing of capitalism and study of its historical models The altering trajectories of production and finance under current globalization The place of socialism in a progressive future A central point of the book is that determinations over the capitalist substance of existing economies demand precise understanding of how in its basic operation capitalism manages to secure the economic reproducibility of human society in the first place To make the case for the passing of capitalism from history the volume draws upon the novel Japanese Uno approach to Marxian political economy From the pages of *Political Economy and Globalization* emerges a grim picture of our human future should current economic trends persist It also offers a positive vision for socio material betterment in redistributive eco sensitive socialist societies of tomorrow This is a must read book for scholars students progressive policy makers and activists Urban Sprawl, Global Warming, and the Empire of Capital George A. Gonzalez, 2009-03-05 Argues that the United States refuses to address global warming because of the reliance of the American economy on urban sprawl

Multinational Corporations and Foreign Direct Investment Stephen D. Cohen, 2007-02-03 Foreign direct investment FDI and multinational corporations MNCs for better and worse play a large and growing role in shaping our world The

integrating thesis of this book is the inevitability of heterogeneity in FDI and MNCs and accordingly the imperative of disaggregation. Large companies doing business on a global basis increasingly dominate the production and marketing of the world's goods and services. The importance of these companies continues to grow while the debate about their nature and effects remains mired in a long standing stalemate couched in strong black and white terms. Stephen D Cohen seeks to reconcile this impasse by analyzing multinational corporations and foreign direct investment in an eclectic nuanced manner. The core thesis is that an accurate understanding of the nature and impact of these phenomena comes from acknowledging the dominance of heterogeneity, perceptions and ambiguity and the paucity of universal truths. This approach should contribute significantly to both a better academic understanding and a more productive policy debate of an increasingly important element of the world economy.

Trade and Structural Adjustment Organisation for Economic Co-operation and Development, 2005. The term adjustment relates to the use of policy instruments to effect structural changes in the economic environment in order to help facilitate growth promotion through improvements in productivity and market competition. This publication examines the reallocation of labour and capital to achieve more efficient use of new sources of competition, technological change and shifting consumer preferences whilst limiting adjustment costs for individuals, communities and society as a whole. Based on specific sectoral case studies it includes analysis of the adjustment challenge and policy framework in both developed and developing countries together with practical recommendations for good practice.

Political Theory and Global Climate Change Steve Vanderheiden, 2008. Showing how political theory challenges and is challenged by global climate change, the book both demonstrates and evaluates innovative approaches in the developing field of environmental political theory.
