Merkel Cells Merkel Cell Carcinoma And Neurobiology Of The Skin:

Merkel Cells, Merkel Cell Carcinoma and Neurobiology of the Skin Japanese Society for Ultrastructural Cutaneous Biology. Symposium, Hiroyuki Suzuki, Tomomichi Ono, 2000 Hardbound The ICS series is proud to publish the proceedings of the 1st Symposium of the Japanese Society for Ultrastructural Cutaneous Biology which will make a significant contribution to advances in the dermatological field Dr Friedrich Merkel first identified the Merkel cells which he called Tastzellen touch cells in 1875 However it was not until the 1960s that the existence of Merkel cells in the human skin was confirmed by Dr Cauna using electron microscopy 1902 saw the discovery of the Haarscheiben hair discs by Dr Felix Pinkus who reported that they are many Merkel cells beneath the epidermis of the disc Today the Merkel cell neurite complex in the hair disc is regarded as a slow adapting type I mechanoreceptor unit Since 1978 when Drs Tang and Toker reported the concept of Merkel cell carcinoma many cases have been identified worldwide Neurobiology neuropeptides and interaction between cutaneous innervation and the The Merkel Cell Klaus Baumann, Zdenek Halata, Ingrid Moll, 2013-03-09 Since their first description in 1875 Merkel cells have remained an elusive cell type Their origin as well as their classification as mechanoreceptors have been a matter of controversy and intense discussion The peptidergic granules in these cells are suggestive of neuroendocrine functions but their discovery has raised additional questions regarding Merkel cell function Essential aspects of structure development and function of normal Merkel cells and Merkel cell carcinoma are presented in short chapters providing concise and up to date information on this fascinating cell type *NGF and Related Molecules in Health and Disease* L. Aloe, L. Calza, 2003-12-10 The book highlights different aspects of current understanding of neurotrophin receptor signal transduction pathways including the signaling endosome hypothesis Findings on the synaptotrophic potential of NGF and related neurotrophins neurotrophin involvement in neuronal stem cell biology biological activity of the NGF precursor proNGF and nociception and antinociception associated activity of NGF and or BDNF are also presented and discussed Several chapters deal with the involvement of various neurotrophins in the control of different nonneuronal processes such as immune inflammatory and allergic reactions tissue repair and wound healing The findings showed that neurotrophins play important roles in the pathobiology of a surprising variety of seemingly unrelated non neurological diseases including bronchial asthma rheumatoid arthritis systemic sclerosis hair growth disorders psoriasis corneal and skin ulcers atherosclerosis metabolic syndrome crush syndrome and Beh et s disease There are also chapters on the involvement of NGF and related molecules in neurological diseases including Huntington s disease the multiple sclerosis like model of experimental allergic encephalomyelitis peripheral neuropathies neuroblastoma Parkinson s disease Alzheimer s disease and even motion sickness syndrome also psychiatric disorders including depression and schizophrenia Finally potential important therapeutic benefits are presented for diabetic neuropathy gastrointestinal dysmotility CNS neurodegenerative disease spinal cord injuries cutaneous and corneal ulcers as well as peripheral ischemic vasculopathy
