practical assignments around key debates in photography Ashley la Grange avoids the trap of an elitist and purely academic approach to critical theory taking a dual theoretical and practical approach when considering the issues Key critical theory texts such as Sontag's *On Photography* and Barthes *Camera Lucida* are clarified and shortened La Grange avoids editorilising letting the arguments develop as the writers had intended it is the assignments which call into question each writer's approach and promote debate This is the ideal book if you want to understand key debates in photography and have a ready made structure within which to discuss and explore these fascinating issues It is accessible to students from high school to university level but will also be of interest to the general reader and to those photographers whose training and work is concerned with the practical aspects of photography Also includes invaluable glossary of terms and a substantial index that incorporates the classic texts helping you to navigate your way through these unindexed works The book also contains useful information on photo mechanical processes explaining how a photograph can appear very differently and as a result be interpreted in a range of ways in a variety of books

**Digital Cultural Heritage** Horst Kremers, 2019-06-21 This book provides an overview of various application spheres and supports further innovations needed in information management and in the processes of knowledge generation The professions organizations and scientific associations involved are unusually challenged by the complexity of the data situation Cartography has always been the central field of application for georeferencing digital cultural heritage DCH objects It is particularly important in enabling spatial relation analysis between any number of DCH objects or of their granular details In addition to the pure geometric aspects the cognitive relations that lead to knowledge representation and derivation of innovative use processes are also of increasing importance Further there is a societal demand for spatial reference and analytics e.g. the extensive use of cognitive concepts of map and atlas for a variety of social topics in the media There is a huge geometrical logical cognitive potential for complex multimedia digital cultural heritage databases and stakeholders expect handling transmission and processing operations with guaranteed long term availability for all other stakeholders In the future whole areas of digital multimedia databases will need to be processed to further our understanding of historical and cultural contexts This is an important concern for the information society and presents significant challenges for cartography in all these domains This book collects innovative technical and scientific work on the entire process of object digitization including detail extraction archiving and interoperability of multimedia DCH data

*Transformative Change in Western Thought* Ingo Gildenhard, 2017-07-05 This groundbreaking volume maps the shifting place and function of marvelous transformations from antiquity to the present day Shape shifting taking animal bodies miracles transubstantiation alchemy and mutation recur and echo throughout ancient and modern writing and thinking and continue in science fiction today as tales of gene splicing and hybridisation The idea of metamorphosis lies in uneasy coexistence with orderly world views and it is often cast out or attributed to enemies Augustine and the church fathers consider shape shifting ungodly Enlightenment thinkers suppress alchemy as unscientific genetically modified wheat and stem cell research are stigmatised as unnatural Yet the very possibility of radical transformation inspires hope just as it frightens A provocative theorising trans historical history this book ranges across classics literature history philosophy theology and anthropology From Homer and Ovid to Proust and H P Lovecraft and through figures from Proteus to Kafka's Fly and to Spiderman four historical surveys are combined with nine case studies to show the malleable yet persistent presence of transformation throughout Western cultural history **The Act of Documenting** Brian Winston, Gail

Vanstone, Wang Chi, 2017-01-26 Documentary has never attracted such audiences never been produced with such ease from so many corners of the globe never embraced such variety of expression The very distinctions between the filmed the filmer and the spectator are being dissolved The Act of Documenting addresses what this means for documentary's 21st century position as a genus in the class cinema for its foundations as primarily a scientific eurocentric and patriarchal discourse for its future in a world where assumptions of photographic image integrity cannot be sustained Unpacked are distinctions between performance and performativity and between different levels of interaction linearity and hypertextuality engagement and impact ethics and conditions of reception Winston Vanstone and Wang Chi explore and celebrate documentary's potentials in the digital age *Urban Encounters* Helen Liggett, 2003 American intellectuals tend to envision the modern

city as a dystopia their perception of urban life influenced by negative stereotypes and fictional depictions in popular culture the author challenges this fatalism by approaching the city as a vibrant lived space Combining a sophisticated critique of the urban with striking street level images the author reclaims the human experience of the city *Picture-Work* Diana Kamin, 2023-11-21 How the image collection organized and made available for public consumption came to define a key

feature of contemporary visual culture The origins of today's kaleidoscopic digital visual culture are many In this book Diana Kamin traces the sharing of photographs to an image economy developed throughout the twentieth century by major institutions *Picture Work* examines how three of these institutions the New York Public Library the Museum of Modern Art and the stock agency H Armstrong Roberts Inc defined the public's understanding of what the photographic image is while building vast collections with universalizing ambitions Highlighting underexplored figures such as the first rights and reproduction manager at MoMA Pearl Moeller and visionary NYPL librarian Romana Javitz and underexplored professional practices Diana Kamin demonstrates how bureaucratic work communicates ideas about images to the public Kamin artfully shows how the public interfaces with these image collections through systems of classification and protocols of search and retrieval These interactions in turn shape contemporary image culture including concepts of authorship art property and value as well as logics of indexing tagging and hyperlinking Together these interactions have forged a concept of the image as alienable content which has intensified with the advent of digital techniques for managing image collections To survey the complicated process of digitization in the nineties and early aughts Kamin also includes interviews with photographers digital asset management system designers librarians and artists on their working practices

**Intersected Identities** Erica Segre, 2007 There has always been an important visual element to the construction and questioning of national identity in post Independence Mexico though one that has not always been given its due outside of the celebrated and much studied muralists Ranging from the early nineteenth century to the present from the vogue for the picturesque illustrated periodicals and the influential writings of Altamirano to a wealth of twentieth century graphic artists filmmakers and photographers this book re examines the complex variety of ways in which that visual element has operated In particular it looks at the ways in which discourses concerning ethnicity and cultural hybridity have been echoed and transformed in Mexican visual culture resulting in fields of visual discourse which are eclectic and increasingly self reflexive

Erben, 2003 Technology continues to transform the world with a process that seems to be constantly accelerating The struggle to understand the way the new computer and communications technologies are transforming the world is many sided What the essays collected in this issue of the Bucknell Review attempt is a general cultural approach to the notion of ther being a technological matrix in which we all now find ourselves adrift and of which our experience is often dread Adrift and dread are not single metaphors in the collection In order to attempt this interrogation of the technological matrix the essayists have drawn from a variety of disciplines literature philosophy religion art media studies while retaining the substantial contibutions of previous theorists of technology The main thrust of this collection is to underscore the vast enrichment given to a study of the new technologies when approached from a broad cultural standpoint
