**Critical Theory and Methodology** Raymond A. Morrow, Raymond Allen Morrow, David D. Brown, 1994-06-24 Critical Theory traces its roots from Marxism through the renowned Frankfurt School to a wide array of national and cultural traditions Raymond Morrow's book traces the history and outlines the major tenets of critical theory for an undergraduate audience He exemplifies the theory through an analysis of two leading social theorists Jürgen Habermas and Anthony Giddens Unique to this volume is the emphasis on the link between Critical Theory and empirical research and social science methodology often thought to be incompatible

Conceptions of Social Inquiry J. J. Snyman, 1993

**Mixed Methods and Cross Disciplinary Research** Janet McIntyre-Mills, Norma R. A. Romm, 2019-07-12 This book uses mixed methods to extend the concept of wellbeing stocks to refer to dynamic ways of working with others It addresses metaphors and praxis for weaving together strands of experience The aim of the wellbeing stocks concept is to enable people to re evaluate economics and to become more aware of the way in which we neglect social and environmental aspects of life The pursuit of profit at the expense of people and the environment is a central problem for democracy and governance The vulnerability of cities is a symptom of the lack of balance between individual and collective needs This book explores the potential for cities specifically in the regions of Indonesia Africa and Australia to become more productive as sites for food and water security through more creative use of technology It highlights the need for partners that see food and security feasible at the household level if supports are provided at the community national and international level The book examines how these regions are affected by demographics climate change and people movements but also explores ways to establish an effective cultural ecosystem management

Accountability in Social Research Norma Romm, 2007-05-08 In this book I have concentrated on drawing attention to various conceptions of accountability that might be brought to bear in judging the practice of social research Much of the book is organized around making explicit the assumptions that influence what counts as proper research in society including assumptions about how social inquirers might be held accountable My focus is on reviewing discourses around the practice of professional inquiry with a view to reconsidering the way in which people create expectations for accountable social inquiry My focus hereon is related to my concern that the manner in which judgments about researchers accountability are made is not without social consequences for our way of living in society I have approached the issues by beginning with a discussion of tenets of the position called positivism so named by certain proponents and by considering the view on accountability that is implied by adherence to these tenets Briefly expressed positivist argumentation suggests that researchers are required to do science in a manner that warrants their being considered indeed scientists I use my

discussion of accountability as seen within positivist argumentation to explicate ways in which alternative positions have arisen as ways of treating accountability issues Through my way of comparing the various positions I hope to provide some indication of the complexity of ethical and accountability issues in social inquiry

**Social Science** Gerard Delanty, 1997 It is argued that the conception of social science emerging today is one that involves a synthesis of radical constructivism and critical realism The crucial challenge facing social science is a question of its public role growing reflexivity in society has implications for the social production of knowledge and is bringing into question the separation of expert systems from other forms of knowledge

**Systems Science** Frank A. Stowell,Daune West,James G. Howell,2012-12-06 As we approach the end of the 20th century we can look back upon the achievements that have been made in a variety of human endeavours with pride Enormous strides have been made to improve the quality of life of millions of people through the application of the scientific discoveries made during this and past centuries The 20th century will be remembered as much for the mass exploitation of scientific discovery as for the discoveries themselves The technological age has meant that the human being is able to contemplate activities which defy nature For example some of the work involved in the preparation of these proceedings has been done whilst travelling at over 500 miles per hour seven miles above the surface of the earth It is not difficult to conjecture about the effect that this relatively recent technology has had upon a number of systems Air transportation has provided a number of benefits including such disparate examples such as enabling holidays famine relief

and the cross fertilisation of cultural practices from other lands Equally there have been undesirable effects such as enabling the means of mass destruction interference in other cultures and the speedy transportation of disease Moreover the physical presence of the aeroplane itself represents the consumption of fossil fuels a source of pollution and a change in the way think about life The view expressed here is of course the view of an inhabitant of the western world **Philosophies of Social**

**Science** Gerard Delanty, Piet Strydom, 2003-04 This is a collection of extracts from classic works on the philosophy of social science highlighting the work of many influential authors who have shaped social science An Introduction to the
