*Signifying and Understanding* Susan Petrilli, 2009-12-15 The theory of signifying signifiés formulated and introduced by Victoria Welby for the first time in 1890s is at the basis of much of twentieth century linguistics as well as in other language and communication sciences such as sociolinguistics psycholinguistics translation theory and semiotics Indirectly the origins of approaches methods and categories elaborated by analytical philosophy Wittgenstein himself Anglo American speech act theory and pragmatics are largely found with Victoria Lady Welby Indeed it is no exaggeration to say in addition that Welby is the founding mother of semiotics Some of Peirce s most innovative writings for example those on existential graphs are effectively letters to Lady Welby She was an esteemed correspondent of scholars such as Bertrand Russell Charles K Ogden Herbert G Wells Ferdinand S C Schiller Michel Br al Andr Lalande the brothers Henry and William James and Peirce as well as Frederik van Eeden Mary

Reck,Georg

Schiemer,2020 This edited volume explores the previously underacknowledged pre history of mathematical structuralism showing that structuralism has deep roots in the history of modern mathematics The contributors explore this history along two distinct but interconnected dimensions First they reconsider the methodological contributions of major figures in the history of mathematics Second they re examine a range of philosophical reflections from mathematically inclinded philosophers like Russell Carnap and Quine whose work led to profound conclusions about logical epistemological and metaphysical aspects of structuralism **Bulletin (new Series) of the American Mathematical Society** ,1910

Essays on Significs H. Walter Schmitz, 1990 Significs is one of those by no means exclusively sign theoretically relevant movements which arose at the turn of the century It established a philosophical tradition which from its very inception was interlaced with widely varying movements ranging for example from Bresson's semantics to Carnap's and Neurath's logical empiricism In this volume an international group of well known scholars from various disciplines undertakes a broad re evaluation of significs and its development which promises also to yield a better knowledge of research approaches in linguistics semiotics philosophy and psychology with which significs was related or vied for acceptance Contributions deal with Lady Welby's biography and socio cultural background the intellectual context of the signific movement at the turn of the century and the relationships between Welby's semiotic and philosophical ideas on the one hand and those of her

contemporaries Breal Peirce Schiller Vailati etc and followers Ogden Van Eeden Mannoury etc on the other Descriptions of the historiographically most important archive materials a bibliography of publications on Lady Welby and her significs and an index of names conclude the volume      Mathematics and the Divine Teun Koetsier, Luc Bergmans, 2004-12-09

Mathematics and the Divine seem to correspond to diametrically opposed tendencies of the human mind Does the mathematician not seek what is precisely defined and do the objects intended by the mystic and the theologian not lie beyond definition Is mathematics not Man's search for a measure and isn't the Divine that which is immeasurable The present book shows that the domains of mathematics and the Divine which may seem so radically separated have throughout history and across cultures proved to be intimately related Religious activities such as the building of temples the telling of ritual stories or the drawing of enigmatic figures all display distinct mathematical features Major philosophical systems dealing with the Absolute and theological speculations focussing on our knowledge of the Ultimate have been based on or inspired by mathematics A series of chapters by an international team of experts highlighting key figures schools and trains of thought is presented here Chinese number mysticism the views of Pythagoras and Plato and their followers Nicholas of Cusa's theological geometry Spinozism and intuitionism as a philosophy of mathematics are treated side by side among many other themes in an attempt at creating a global view on the relation of mathematics and Man's quest for the Absolute in the course of history Mathematics and man's quest for the Absolute A selective history highlighting key figures schools and trains of thought An international team of historians presenting specific new findings as well as general overviews Confronting and uniting otherwise compartmentalized information      **Bibliotheca Chemico-mathematica** Henry Sotheran Ltd, Heinrich Zeitlinger, Henry Cecil Sotheran, 1921      *Nature* Sir Norman Lockyer, 1910      **Philosophy of Mathematics** Paul Benacerraf, Hilary Putnam, 1983 Seminal articles in the philosophy of mathematics by Russell Quine G del and other major thinkers
