Methodology Of Sociological Research General Problems:

Methodology of Sociological Research S. Nowak, 1977-04-30 This is the first part of a textbook for students of sociology and for those students of other social sciences who wish to make use in their work of the research methods elaborated in the course of the development of empirical sociology over the last few decades The development of empirical sociological research in our country and the growing demand both for a practical application of its results and for graduates of sociological studies in various fields of social practice testifies to a much broader trend It is evidence of a desire to base our understanding and conscious transformation of social phenomena on a sound scientific perception of social processes and the mechanisms governing them The increasing volume of studies in Poland is accompanied by a growing need for a particular type of research method namely one in which questions addressed to the sociologist would be answered in a manner as free as possible of conclusions based on impressions and defining as unambiguously as possible both the limits of the generality and the degree of validity of the inferences drawn from the results of the research These conditions are met by the so called standardized methods of investigating social phenomena which together with statistical methods of analyzing collected material constitute the principal means of conducting sociological research in the world today

Methodology of Social Research Dr. Vidyapati Gautam, 2021-09-11 Social scientists are divided into camps of support for particular research techniques These disputes relate to the historical core of social theory positivism and antipositivism structure and agency While very different in many aspects both qualitative and quantitative approaches involve a systematic interaction between theory and data The

choice of method often depends largely on what the researcher intends to investigate For example a researcher concerned with drawing a statistical generalization across an entire population may administer a survey questionnaire to a representative sample population There are no laws in social science that parallel the laws in natural science Law in social science is a universal generalization about a class of facts A fact is an observed phenomenon and observation means it has been seen heard or otherwise experienced by the researcher A theory is a systematic explanation for the observations that relate to a particular aspect of social life Concepts are the basic building blocks of theory and are abstract elements representing classes of phenomena Axioms or postulates are basic assertions assumed to be true Propositions are conclusions drawn about the relationships among concepts based on analysis of axioms This book is designed for students at the beginning of their journey in social research It aims to provide an accessible practically oriented introduction to social research methods The research methods included in this book are selected on the basis of their relevance to contemporary social research practice Contents Survey Methodology Multimethodology Observational Field Research Scientific Methods in Social Work Research Critical Action Research in Social Work Evaluation Design and Methods Ethics and the Ruling Relations of Research Production Multivariate Statistics Statistical Power Descriptive Research

A Boole Anthology James Gasser, 2013-11-11 Modern mathematical logic would not exist without the analytical tools first developed by George Boole in The Mathematical Analysis of Logic and The Laws of Thought The influence of the Boolean school on the development of logic always recognised but long underestimated has recently become a major research topic This collection is the first anthology of works on Boole It contains two works published in 1865 the year of Boole's death but never reprinted as well as several classic studies of recent decades and ten original contributions appearing here for the first time From the programme of the English Algebraic School to Boole's use of operator methods from the problem of interpretability to that of psychologism a full range of issues is covered The Boole Anthology is indispensable to Boole studies and will remain so for years to come

The Limits of Logical Empiricism Alfons Keupink, Sanford Shieh, 2006-03-30 Arthur Pap's work played an important role in the development of the analytic tradition This role goes beyond the merely historical fact that Pap's views of dispositional and modal concepts were influential As a sympathetic critic of logical empiricism Pap like Quine saw a deep tension in logical empiricism at its very best in the work of Carnap But Pap's critique of Carnap is quite different from Quine's and represents the discovery of limits beyond which empiricism cannot go where there lies nothing other than intuitive knowledge of logic itself Pap's arguments for this intuitive

knowledge anticipate Etchemendy's recent critique of the model theoretic account of logical consequence Pap's work also anticipates prominent developments in the contemporary neo-Fregean philosophy of mathematics championed by Wright and Hale Finally Pap's major philosophical preoccupation the concepts of necessity and possibility provides distinctive solutions and perspectives on issues of contemporary concern in the metaphysics of modality In particular Pap's account of modality allows us to see the significance of Kripke's well known arguments on necessity and apriority in a new light *Talking Wolves* A. Biletzki, 2013-03-14 *Talking Wolves* advances an analysis of Hobbes which takes language seriously as seriously as Hobbes took it It presents a reading of Hobbes's view of society at large and political society in particular through a comprehensive discussion based on and intimately linked to his philosophy of language This philosophy in turn is seen in a new light as being a pragmatic theory of language in use language in action **Philosophy and Logic In Search of the Polish Tradition** Jaakko Hintikka, 2003-11-30 This volume contains papers on truth logic semantics and history of logic and philosophy These papers are dedicated to Jan Wolenski to honor his 60th birthday Jan Wolenski is professor of philosophy at the Department of Philosophy of the Jagiellonian University in Cracow Poland He is likely to be the most well known Polish philosopher of this time best known for his work on the history of the philosophy and logic of the Lvov-Warsaw School

Intensionality and Truth Philip Hugly, C. Sayward, 2012-12-06 Prior's view on intensionality and truth is based on the principle that sentences never name that what sentences say cannot be otherwise signified that a sentence says what it says whatever the type of its occurrence and that sentential quantification is neither eliminable substitutional nor referential The text defends each of these principles **Theoretical Knowledge** Vyacheslav S. Stepin, 2005-11-13 In *Theoretical Knowledge* an original conception of a structure and dynamics of scientific knowledge is proposed A detailed analysis of the foundations of science performed by the author allowed him to develop new ideas and approaches to demonstrate how sociocultural factors are incorporated in the process of yielding of new theories He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science He displays three historical types of scientific rationality classical non-classical and post non-classical which appears in modern science and shows features of their coexistence and interplay It is shown that along with the emerging of post non-classical rationality science increases the sphere of its worldview applications Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures The investigation is based on the extensive literature on the history of natural and social sciences The reader will find in the book authentic historical reconstructions of the processes of the development of classical and quantum electrodynamics relativity and conceptions of evolution in biology Internal Logic Y. Gauthier, 2002-06-30 Internal logic is

the logic of content The content is here arithmetic and the emphasis is on a constructive logic of arithmetic arithmetical logic Kronecker s general arithmetic of forms polynomials together with Fermat s infinite descent is put to use in an internal consistency proof The view is developed in the context of a radical arithmetization of mathematics and logic and covers the many faceted heritage of Kronecker s work which includes not only Hilbert but also Frege Cantor Dedekind Husserl and Brouwer The book will be of primary interest to logicians philosophers and mathematicians interested in the foundations of mathematics and the philosophical implications of constructivist mathematics It may also be of interest to historians since it covers a fifty year period from 1880 to 1930 which has been crucial in the foundational debates and their repercussions on the contemporary scene

Structures in Science Theo A.F. Kuipers,2001-10-31 The philosophy of science has lost its self confidence witness the lack of advanced textbooks in contrast to the abundance of elementary textbooks *Structures in Science* is an advanced textbook that explicates updates accommodates and integrates the best insights of logical empiricism and its main critics This neo classical approach aims at providing heuristic patterns for research The book introduces four ideal types of research programs descriptive explanatory design and explicative and reanimates the distinction between observational laws and proper theories It explicates various patterns of explanation by subsumption and specification as well as structures in reductive and other types of interlevel research Its analysis of theory evaluation leads to new characterizations of confirmation empirical progress and pseudoscience Partial analogies between progress in nomological research i e observational referential and theoretical truth approximation presented in detail in *From Instrumentalism to Constructive Realism* 2000 and progress in explicative and design research emerge Finally special chapters are devoted to design research programs computational philosophy of science the structuralist approach to theories and research ethics

Causality in Sociological Research Jakub Karpinski,2012-12-06 The general treatment of problems connected with the causal conditioning of phenomena has traditionally been the domain of philosophy but when one examines the relationships taking place in the various fields the study of such conditionings belongs to the empirical sciences Sociology is no exception in that respect In that discipline we note a certain paradox Many problems connected with the causal conditioning of phenomena have been raised in sociology in

relatively recent times and that process marked its empirical or even so called empiricist trend That trend labelled positivist seems in this case to be in contradiction with a certain type of positivism Those authors who describe positivism usually include the Humean tradition in its genealogy and remembering Hume s criticism of the concept of cause speak about positivism as about a trend which is inclined to treat lightly the study of causes and confines itself to the statements on co occurrence of phenomena

Social Research Methods Sigmund Grønmo, 2023-11-22 Framing research as the process of asking and answering questions this book demonstrates how to identify good research questions and how to structure and explore them successfully Whether you are just beginning your research journey or are a seasoned traveller it helps you Decide what you want to achieve with your research Know what options you have to explore your goals Navigate the nuances of different research approaches Understand the decisions of other researchers Choose what path best suits your project Through real life examples demonstrating different types of research the book introduces qualitative quantitative and mixed methods approaches so you can compare different methods at every stage of the research process from initial idea and design to data collection and analysis This new edition includes new chapters on collecting and analysing mixed methods data and additional content on qualitative data analysis New examples reflect the cultural and global diversity of social research and extra visual aids and summaries support understanding of key research concepts and stages The book is accompanied by an online teaching guide including videos additional case studies annotated articles and critical thinking exercises
