Dialectological and Folk Dialectological Concepts of Space Sandra Hansen,Christian Schwarz,Philipp Stoeckle,Tobias Streck,2012-10-30 In variational linguistics the concept of space has always been a central issue However different research traditions considering space coexisted for a long time separately Traditional dialectology focused primarily on the diatopic dimension of linguistic variation whereas in sociolinguistic studies diastratic and diaphasic dimensions were considered For a long time only very few linguistic investigations tried to combine both research traditions in a two dimensional design a desideratum which is meant to be compensated by the contributions of this volume The articles present findings from empirical studies which take on these different concepts and examine how they relate to one another Besides dialectological and sociolinguistic concepts also a lay perspective of linguistic space is considered a paradigm that is often referred to as folk dialectology Many of the studies in this volume make use of new computational possibilities of processing and cartographically representing large corpora of linguistic data The empirical studies incorporate findings from different linguistic communities in Europe and pursue the objective to shed light on the inter relationship between the different concepts of space and their relevance to variational linguistics **The Restaurant** John R. you well beyond simple search to Google guru-dom **Ecosystem Management** Gary Meffe, Larry Nielsen, Richard L. Knight, Dennis Schenborn, 2012-08-31 Today's natural resource managers must be able to navigate among the complicated interactions and conflicting interests of diverse stakeholders and decisionmakers. Technical and scientific knowledge though necessary are not sufficient. Science is merely one component in a multifaceted world of decision making. And while the demands of resource management have changed greatly, natural resource education and textbooks have not. Until now Ecosystem Management represents a different kind of textbook for a different kind of course. It offers a new and exciting approach that engages students in active problem solving by using detailed landscape scenarios that reflect the complex issues and conflicting interests that face today's resource managers and scientists. Focusing on the application of the sciences of ecology and conservation biology to real world concerns, it emphasizes the intricate ecological, socioeconomic, and institutional matrix in which natural resource management functions and illustrates how to be more effective in that challenging arena. Each chapter is rich with exercises to help facilitate problem-based learning. The main text is supplemented by boxes and figures that provide examples, perspectives, definitions, summaries, and learning tools, along with a variety of essays written by practitioners with on-the-ground experience in applying the principles of ecosystem management. Accompanying the textbook is an instructor's manual that provides a detailed overview of the book and specific guidance on designing a course around it. Download the manual [here](#). Ecosystem Management grew out of a training course developed and presented by the authors for the U.S. Fish and Wildlife Service at its National Training Center in Shepherdstown, West Virginia. In 20 offerings to more than 600 natural resource professionals, the authors learned a great deal about what is needed to function successfully as a professional resource manager. The book offers important insights and a unique perspective derived from that invaluable experience.
