Northern Elephant Seal:

Elephants from the Sea Lynn M. Stone,1991 Describes the physical characteristics behavior and unusual life cycle of this large seal which lives part of its life on land and part far out to sea The Northern Elephant Seal Charles Haskins Townsend,1912 The Comeback Kids Book 1, the Northern Elephant Seals Penelope Dyan,2015-06-28 The Northern Elephant Seal *Mirounga angustirostris* the guys with the great big noses and the squabbling harems are the really big comeback kids and we mean that because not only are the elephant seals really big they have made a really big comeback Hundreds of thousands of these really fun creatures once inhabited the Pacific Ocean and then they were wholesale slaughtered in the 1800 s for their blubber that could be rendered into oil Only 50 100 of them were left to roam the vast ocean where they spend most of their time until it is time for them to come ashore to molt or mate They lumber across land very slowly and they mate and molt on land so the elephant seals were a very easy target for their human hunters In 1922 the Mexican government enacted laws to protect them and a few years later the United States of America did the very same thing Miraculously these grand animals began to slowly reappear Today it is estimated there are about 160 000 elephant seals Males have a life expectancy of 14 years while a female elephant seal lives to the ripe old age of 20 They are pinnipeds and molt like all pinnipeds do to get rid of old skin and hair but they do that all at once once a year during the spring and summer and exactly when they molt depends on the age that they are and who they are The females and juveniles molt from April to May and the young males molt from May to June while the Adult males molt from July to August They come to shore to mate and to give birth in December and hang out on the beach for a few months because the process of birthing and mating and weaning must take its proper course The female mates approximately 24 days after giving birth The males are 14 to 16 feet in length and weigh up to two and a half tons each and the females are a petite 10 to 12 feet in length and weigh a mere 1200 to 2000 pounds This is the first book in The Comeback Kids Book Series It is meant to inspire and to make you realize anything is possible in this world if we stop doing what is wrong and do what is right and give mother nature the opportunity to nourish herself The Photographs by John D Weigand were taken with reverence at the direction of this author at the seal rookery at Piedras Blancas at the southern end of Big Sur on the California coast twelve miles north of Cambria

A Review of the Population Ecology of the Northern Elephant Seal (*Mirounga Angustirostris*) Peter John Patrick Gogan,1977 The Northern Elephant Seal John E. Becker,2004 Northern elephant seals were almost driven to extinction during the nineteenth century when they were hunted for their valuable oil Once they were given protection early in the twentieth century they began to recover Today they are found in healthy numbers once again along the Pacific Coast of North America **Return from Extinction** Linda L. Richards,2020-10-13 Less than 100 years ago the northern elephant seal was thought to be extinct Today more than 250 000 elephant seals swim in the Pacific Ocean from Alaska to Mexico In **Return from Extinction The Triumph of the Elephant Seal** Linda L Richards tells the story of their dramatic recovery Elephant

seals were hunted to near extinction for their precious oil before the Mexican government stepped in to protect them Many people thought it was too late Even though the life of the elephant seal is difficult and only 20 percent of pups born will make it to adulthood the species adapted and came back from the brink They are a true conservation success story Survival of a Species: the Elephant Seal James T. Crow,1971 Describes the physical characteristics behavior and habitat of the elephant seal the largest member of the amphibious mammal species

Growth of a Northern Elephant Seal (*Mirounga Angustirostris*) Colony Christine Ann Ribic,1984 *The Comeback Kids Book 1, the Northern Elephant Seals* Penelope Dyan,John D. Weigand,2008-03 The Northern Elephant Seal *Mirounga angustirostris* the guys with the great big noses and the squabbling harems are the really big comeback kids and we mean that because not only are the elephant seals really big they have made a really big comeback Hundreds of thousands of these really fun creatures once inhabited the Pacific Ocean and then they were wholesale slaughtered in the 1800 s for their blubber that could be rendered into oil Only 50 100 of them were left to roam the vast ocean where they spend most of their time until it is time for them to come ashore to molt or mate They lumber across land very slowly and they mate and molt on land so the elephant seals were a very easy target for their human hunters In 1922 the Mexican government enacted laws to protect them and a few years later the United States of America did the very same thing Miraculously these grand animals began to slowly reappear Today it is estimated there are about 160 000 elephant seals Males have a life expectancy of 14 years while a female elephant seal lives to the ripe old age of 20 They are pinnipeds and molt like all pinnipeds do to get rid of old skin and hair but they do that all at once once a year during the spring and summer and exactly when they molt depends on the age that they are and who they are The females and juveniles molt from April to May and the young males molt from May to June while the Adult males molt from July to August They come to shore to mate and to give birth in December and hang out on the beach for a few months because the process of birthing and mating and weaning must take its proper course The female mates approximately 24 days after giving birth The males are 14 to 16 feet in length and weigh up to two and a half tons each and the females are a petite 10 to 12 feet in length and weigh a mere 1200 to 2000 pounds This is the first book in The Comeback Kids Book Series It is meant to inspire and to make you realize anything is possible in this world if we stop doing what is wrong and do what is right and give mother nature the opportunity to nourish herself The Photographs by John D Weigand were taken with reverence at the direction of this author at the seal rookery at Piedras Blancas at the southern end of Big Sur on the California coast twelve miles north of Cambria

Northern Elephant Seal Monitoring (*Mirounga Angustirostris*) at Point Reyes National Seashore 2008-2009 Breeding Seasons Sarah Allen,2013-08-06 Northern elephant seals *Mirounga angustirostris* established a breeding population at Point Reyes National Seashore PORE in 1981 and since then the colony has grown steadily Allen et al 1989 Currently elephant seals breed at numerous sites within PORE with four primary sites located at Drake s Beach DB Point Reyes Headland PRH South Beach SB and Chimney Rock Loop CRL PORE began to monitor the

elephant seal population to contribute to the understanding of population changes and management needs and to develop research interpretation and enforcement strategies A pinniped monitoring protocol was developed in 2009 and includes objectives for monitoring elephant seals to determine trends population growth and productivity

Movements of the Northern Elephant Seal Judith Louise Parrish,1976 **The Northern Elephant Seal** Charles Haskins Townsend,1912

The Elephant Seal William Reynolds Sanford,Carl R. Green,1987 An introduction to the physical characteristics habits and natural environment of the elephant seal *Isu Learns to Swim* Charmaine Coimbra,2020-08-18 *Isu Learns to Swim* is an excellent addition to marine education for young people It s a fictional story based on fact about how the amazing northern elephant seal begins the first months of its life Unlike many other mammals a northern elephant seal pup is on its own after about four weeks of nursing This is when the pup s mother leaves it behind and returns to the sea This story tells in the most simple of terms of how an abandoned four week old seal survives without an ounce of survival skills including the ability to swim The award winning manuscript is now paired with lively photos of elephant seal pups mothers and rambunctious weaners who play on the beach and explore the water

Elephants on the Beach Irene Brady,1986 Describes the physical characteristics and habits of the northern elephant seal Northern Elephant Seal (Mirounga Angustirostris) Colony Establishment and Growth in the King Range National Conservation Area, California Emma Hatton Levy,2022 The King Range colony is the northernmost successful and expanding breeding site for northern elephant seals *Mirounga angustirostris* To evaluate the composition and growth of this colony I conducted systematic surveys recording counts age classes births and resighting seals with individually identifiable flipper tags The timing of life history events breeding molting and resting of all elephant seal sex and age groups at the King Range was consistent with observations at other colonies Colony counts during breeding and molting have increased steadily over the 4 year study period 2018 2021 and pup production has increased by 87% since the first year of monitoring The main driver of colony growth was juvenile elephant seals dispersing from colonies in central California as revealed by the majority of tag resights being of juveniles from Point Reyes Juvenile seasonal haul out behavior differed with a higher percentage of new juveniles seen in the fall than in the spring and higher variability in seasonal arrival date tenure and number of visits in the fall resting haul out than during the spring molt This difference may be due to the extreme physiological demands on elephant seals during their spring molt which is absent during the fall This growing northern elephant seal colony will likely become a seed colony for further northern dispersal as this species continues to be impacted by global climate change By documenting juvenile dispersal and colony growth I provide information to managers and the public for use in preparing and managing conflicts that might arise with the predicted expansion and redistribution of this species
