A Biographical Dictionary of People in Engineering Carl W. Hall, 2008. Advancements in the field of engineering that have led to major inventions and discoveries are built on the foundations of predecessors and their work. In many cases, small steps are taken by a variety of researchers, leading ultimately to a very momentous discovery. *A Biographical Dictionary of People in Engineering Literature* lists the work and contributions of thousands of people from many countries, representing numerous fields of endeavor over many centuries. The ancient cultures of people in China, Arabia, India, and Japan, the Renaissance culture of the Greeks, Egyptians, Romans, and in addition, the European cultures of the Russians, Germans, French, and others, all have contributed to what is now called engineering. The terms engineer and engineering are rather recent, but former builders, architects, instrument makers, inventors, discoverers, and shop workers were part of the process. This work contains the necrologies, names, dates, and a brief biography up to the year 2000 of people who are found in engineering and invention literature. The names were culled from histories, biographies, literature, and handbooks, particularly from those reference titles.

World Famous Scientists RAJEEV GARG, 2012-11-15 Written in simple and lucid language these biographical sketches of great scientists have been put together for ready reference History of the world is replete with such instances of such men and women who went against all the odds and achieved great heights and changed the shape of the world In fact reading about the life sketch of a scientist and his achievements has certainly great infotainment value Besides the lives of great men and women provide us inspiration to do things differently and more confidently For some people these inspirations have more importance than

any other motivational factors When we learn that Edison was a poor boy without any formal schooling or Faraday was an apprentice at a stationery shop we feel greatly motivated and think if they could do it we can do it too We find a new confidence in ourselves In this respect the importance of these books specially for children can hardly be underestimated Rather they could even be a part of the curriculum as at times they can prove so inspiring and motivate a person in such a way that they could change the entire course of the life of a person The main aim of this series is to expand the mental horizons of our readers and motivate them to achieve great heights in life It is certainly a very valuable addition to the literature of popular science The book can also prove to be an ideal companion during leisure time v spublishers
