Pandora's Poison Joe Thornton,2000 The dangers of organochlorides and a proposed solution **Opening Pandora's Box** G. Nigel Gilbert,Michael Mulkay,1984-02-23 This book proposes a fresh approach to sociological analysis and in particular to the analysis of scientific culture It moves away from previous studies which have tended to focus on scientists actions and beliefs to show that analysis of scientific discourse can be productive and revealing The book demonstrates that scientists produce varying accounts of their actions and beliefs in different social situations Rather than attempting to extract

one coherent interpretation from these diverse accounts the study identifies two basic scientific repertoires and shows how scientists use them to create their discourse This provides a point of departure for more complex analytical topics Discourse analysis is applied to show how different degrees of consensus can be ascribed to the same group of scientists at a given moment in time through the application of standard interpretive techniques Finally discourse analysis is used to explore scientists humour a neglected topic that is shown to provide important insights into the normally hidden interpretive regularities which underlie the cultural diversity of science

Pandora's Picnic Basket Alan McHughen,2000-06-22 Are you concerned about fish genes in tomatoes Worried that brazil nut genes in soybeans can result in potentially lethal allergic reactions That rapeseed plants bred to be resistant to herbicides could become uncontrollable superweeds You are not alone The issue of genetically modified foods has fast become one of the most debated of recent years with scientists and companies seeking to develop the technology on one side and consumer groups and environmentalists on the other However in spite of the great heat generated by the debate there is very little real information on the subject either about the technologies in use or about the regulatory processes established to approve the processes and the products This book sets out to explain in clear and direct language the technologies underlying so called genetically modified food and compares them with other natural methods of plant breeding and production The author then looks at the safeguards in place from regulators around the world and asks whether these are sufficient The question of labelling held by some to be an obvious way out for concerned consumers is examined and the honesty and usefulness of some of these labels addressed The book then looks at issues of real concern particularly environmental issues and ways in which a consumer can seek to avoid GMOs if they so choose In each chapter key topics are addressed through question and answer boxes Real case histories illustrate the development and regulation of GMOs and by the end of the book the reader will be able to make an informed choice about whether to support or challenge this technology the products of which are increasingly pervasive **Roping Pandora's Box** Daphne Bronwyn,2006-03-01 Interior designer Madison Harper is positive she has her life under control Her career is flourishing her social calendar is full and each night she falls asleep in her Brentwood condo overlooking the Los Angeles skyline Her life is a far cry from the mercurial years she spent on her grandfather s ranch Unfortunately her predictable life is knocked off balance when her friend Beth requests
