Paradigmatic Structure Of Person Marking:

The Paradigmatic Structure of Person Marking Michael Cysouw,2009-01-29 This book explores person markers the linguistic elements that provide points of reference to speech act participants Michael Cysouw develops a new framework for the typology of person marking based on the rejection of the notion of plurality for its analysis When a mother says Mummy is going to say goodnight now Mummy is the person marker in a way that in English is confined to motherese but which is used more commonly in some other languages and may also be characteristic of much earlier forms Dr Cysouw divides the person markers of 400 languages into paradigms He considers how the structure of these person paradigms relates to their function His investigation provides a clear account of how person markers work syntactically pragmatically and semantically as well as giving fresh insights into aspects of linguistic change language relatedness and the interfaces between discourse syntax and semantics The combination of a typological and a comparative approach results in the first outline of a cognitive map of the paradigmatic structure of person marking *The Paradigmatic Structure of Person Marking* Michael Cysouw,2023 This book investigates paradigms of person both independent pronouns as well as bound person marking Based on empirical and theoretical grounds the author argues that the notion number has to be redefined to deal with the cross linguistic variation of person marking The Paradigmatic Structure of Person Marking Michael Cysouw,2009 The Paradigmatic Structure of Person Marking Michael Alexander Cysouw,2001 Pronouns ⸗ Grammar and Representation Horst J. Simon,Heike Wiese,2002-09-27 The contributions of this thematic collection center around the typology of pronominal paradigms the generation of syntactic and semantic representations for constructions containing pronouns and the neurological underpinnings for linguistic distinctions that are relevant for the production and interpretation of these constructions They come from different theoretical approaches and methodological backgrounds and take into account data from a wide range of Indoeuropean and non Indoeuropean languages Bringing together a cross section of recent research on the grammar and representation of pronouns the volume offers a kaleidoscope of studies united by the common topic of pronouns as a domain of language that exemplarily shows the interaction of different components responsible for computational syntactic and semantic lexical and discourse pragmatic processes **THE FUNCTION OF PRONOMINAL EXPRESSIONS IN PUXIAN** JIANMING WU,2018-09-06 Puxian is one of the Min dialects in China This book investigates the function of pronominal expressions in Puxian focusing especially on three prominent issues in the linguistic literature viz impersonal reference self forms and person effects on word order The investigation of impersonality deals with a group of constructions in Puxian that have pronominalized subjects but crucially with impersonal reference By means of careful examination these subjects are for the first time projected onto five semantic domains on a connected loop The discussion on self forms in Puxian focuses on their interrelated functions along the pathway of grammaticalization such as reflexivity intensification viewpoint markings verbal manner etc Significantly this discussion is based on the latest functional typological perspectives which is different

from previous approaches to Mandarin ziji The attention to word order and person effect is related to the polyfunctional morpheme k 21 which plays a part in several constructions ranging from the monotransitives ditransitives causatives passives and even to the intransitives The main concern is how the grammatical category of person as a whole may affect the placement of syntactic constituents as well as encodings of argument roles by means of the morpheme k 21 Since Puxian has been relatively unknown in linguistics a sketch of Puxian grammar and language situation is also offered in this book

Linguistic Typology Jae Jung Song,2018 This textbook provides a critical introduction to major research topics and current approaches in linguistic typology It draws on a wide range of cross linguistic data to describe what linguistic typology has revealed about language in general and about the rich variety of ways in which meaning and expression are achieved in the world s languages **Features of Person** Peter Ackema,Ad Neeleman,2018-10-23 A proposal that person features do not have inherent content but are used to navigate a person space at the heart of every pronominal expression This book offers a significant reconceptualization of the person system in natural language The authors leading scholars in syntax and its interfaces propose that person features do not have inherent content but are used to navigate a person space at the heart of every pronominal expression They map the journey of person features in grammar from semantics through syntax to the system of morphological realization Such an in depth cross modular study allows the development of a theory in which assumptions made about the behavior of a given feature in one module bear on possible assumptions about its behavior in other modules The authors new theory of person built on a sparse set of two privative person features delivers a typologically adequate inventory of persons captures the semantics of personal pronouns impersonal pronouns and R expressions accounts for aspects of their syntactic behavior and explains patterns of person related syncretism in the realization of pronouns and inflectional endings The authors discuss numerous observations from the literature defend a number of theoretical choices that are either new or not generally accepted and present novel empirical findings regarding phenomena as different as honorifics number marking and unagreement **Linguistic Diversity and Language Theories** Zygmunt Frajzyngier,Adam Hodges,David S. Rood,2005-01-01 From the refinement of general methodology to new insights of synchronic and diachronic universals to studies of specific phenomena this collection demonstrates the crucial role that language data play in the evolution of useful accurate linguistic theories Issues addressed include the determination of meaning in typological studies a refined understanding of diachronic processes by including intentional social statistical and level determined phenomena the reconsideration of categories such as sentence evidential or adposition and structures such as compounds or polysynthesis the tension between formal simplicity and functional clarity the inclusion of unusual systems in theoretical debates and fresh approaches to Chinese classifiers possession in Oceanic languages and English aspect This is a careful selection of papers presented at the International Symposium on Linguistic Diversity and Language Theories in Boulder Colorado The purpose of the Symposium was to confront fundamental issues in language structure and change with

the rich variation of forms and functions observed across languages **Clusivity** Elena Filimonova,2005-11-30 This book presents a collection of papers on clusivity a newly coined term for the inclusive exclusive distinction Clusivity is a widespread feature familiar from descriptive grammars and frequently figuring in typological schemes and diachronic scenarios However no comprehensive exploration of it has been available so far This book is intended to make the first step towards a better understanding of the inclusive exclusive opposition by documenting the current linguistic knowledge on the topic The issues discussed include the categorial and paradigmatic status of the opposition its geographical distribution realization in free vs bound pronouns inclusive imperatives clusivity in the 2nd person honorific uses of the distinction etc These case studies are complemented by the analysis of the opposition in American Sign Language as opposed to spoken languages In depth areal and family surveys of clusivity consider this opposition in Austronesian Tibeto Burman central western South American Turkic languages and in Mosetenan and Shuswap **Endangered Languages** Andrew Simpson,Peter Austin,2018-09-17 Peter K Austin Andrew Simpson Introduction Nicholas Evans Warramurrungunji undone Australian languages in the 51st Millenium Knut J Olawsky Obvious OVS in Urarina syntax Larry M Hyman Imelda Udoh Length harmony in Leggbá a counter universal Nora England The influence of Mayan speaking linguists on the state of Mayan linguistics Pamela Munro Oblique subjects in Garifuna Marina Chumakina Anna Kibort Greville G Corbett Determining a language s feature inventory person in Archi Friederike L pke Vanishing voice the morphologically zero coded passive of Jalonke Anju Saxena The ergative in Kinnauri narratives John Hajek Sound systems of the Asia Pacific some basic typological observations Martina Faller The Cusco Quechua Reportative evidential and rhetorical relations Emmon Bach Deixis in Northern Wakashan recovering lost forms Roberto Zavala Inversion and obviation in Mesoamerica **Languages Across Boundaries** Dik Bakker,Martin Haspelmath,2013-09-03 This book is dedicated to Anna Siewierska who died far too young in 2011 It contains 15 contributions by 20 linguists who may be counted among the foremost scholars in the field of linguistic typology All of these articles discuss a topic that is prominent in Anna s work whose journal articles and monographs on the passive on word order and on the category of person are standard literature in these respective fields Mindful of Anna s last monograph Person the majority of the contributions in this volume discuss free and bound person forms argument indexing reference tracking systems impersonals and related issues such as suppletion and incompleteness in person paradigms the origin of referential systems dependent versus independent marking and referential hierarchies Other topics are grammatical alignment grammatical voice ditransitives and word order Most of the contributions take a broad typological perspective Others give a more in depth treatment based on data from a specific language notably Spanish Russian Mandinka and Mohawk The book contains a complete bibliography of Anna Siewierska s linguistic production **The Oxford Handbook of Morphological Theory** Jenny Audring,Francesca Masini,2018-12-06 This volume is the first handbook devoted entirely to the multitude of frameworks adopted in the field of morphology including Minimalism

Optimality Theory Network Morphology Cognitive Grammar and Canonical Typology Following an introduction from the editors the first part of the volume offers critical discussions of the main theoretical issues within morphology both in word formation and in inflection as well as providing a short history of morphological theory In the core part of the handbook part II each theory is introduced by an expert in the field who guides the reader through its principles and technicalities its advantages and disadvantages and its points of agreement and disagreement with alternative theories Chapters in part III explore the bigger picture connecting morphological theory to other subdisciplines of linguistics such as diachronic change language acquisition psycholinguistics and sign language theory The handbook is intended as a guide for morphologists from all theoretical backgrounds who want to learn more about frameworks other than their own as well as for linguists in related subfields looking for theoretical connections with the field of morphology **Yearbook of Morphology 2004** Geert E. Booij,Jaap van Marle,2006-07-11 A revival of interest in morphology has occurred during recent years The Yearbook of Morphology published since 1988 has proven to be an eminent support for this upswing of morphological research since it contains articles on topics which are central in the current theoretical debates which are frequently referred to In the Yearbook of Morphology 2004 a number of papers is devoted to the topic morphology and linguistic typology These papers were presented at the Fourth Mediterranean Morphology Meeting in Catania in September 2003 Within the context of this denominator a number of issues are discussed wich bear upon universals and typology These issues include universals and diachrony sign language syncretism periphrasis etc *New Challenges in Typology* Matti Miestamo,Bernhard Wälchli,2008-09-25 The sixteen chapters in this volume are written by typologists and typologically oriented field linguists who have completed their Ph D theses in the first four years of this millennium The authors address selected theoretical questions of general linguistic relevance drawing from a wealth of data hitherto unfamiliar to the general linguistic audience The general aim is to broaden the horizons of typology by revisiting existing typologies with larger language samples exploring domains not considered in typology before taking linguistic diversity more seriously strengthening the connection between typology and areal linguistics and bridging the gap to other fields such as historical linguistics and sociolinguistics The papers cover grammatical phenomena from phonology morphology up to the syntax of complex sentences The linguistic phenomena scrutinized include the following foot and stress tone infixation inflection vs derivation word formation polysynthesis suppletion person marking reflexives alignment transitivity tense aspect mood systems negation interrogation converb systems and complex sentences More general methodological and theoretical issues such as reconstruction markedness semantic maps templates and use of parallel corpora are also addressed The contributions in this volume draw from many traditional fields of linguistics simultaneously and show that it is becoming harder and maybe also less desirable to keep them separate especially when taking a broadly cross linguistic approach to language The book is of interest to typologists and field linguists as well as to any linguists interested in theoretical issues in different subfields of linguistics

The Oxford Handbook of Inflection Matthew Baerman,2015-07-30 This is the latest addition to a group of handbooks covering the field of morphology alongside The Oxford Handbook of Case 2008 The Oxford Handbook of Compounding 2009 and The Oxford Handbook of Derivational Morphology 2014 It provides a comprehensive state of the art overview of work on inflection the expression of grammatical information through changes in word forms The volume s 24 chapters are written by experts in the field from a variety of theoretical backgrounds with examples drawn from a wide range of languages The first part of the handbook covers the fundamental building blocks of inflectional form and content morphemes features and means of exponence Part 2 focuses on what is arguably the most characteristic property of inflectional systems paradigmatic structure and the non trivial nature of the mapping between function and form The third part deals with change and variation over time and the fourth part covers computational issues from a theoretical and practical standpoint Part 5 addresses psycholinguistic questions relating to language acquisition and neurocognitive disorders The final part is devoted to sketches of individual inflectional systems illustrating a range of typological possibilities across a genetically diverse set of languages from Africa Asia and the Pacific Australia Europe and South America **Language Structure and Environment** Rik De Busser,Randy J. LaPolla,2015-06-15 Language Structure and Environment is a broad introduction to how languages are shaped by their environment It makes the argument that the social cultural and natural environment of speakers influences the structures and development of the languages they speak After a general overview the contributors explain in a number of detailed case studies how specific cultural societal geographical evolutionary and meta linguistic pressures determine the development of specific grammatical features and the global structure of a varied selection of languages This is a work of meticulous scholarship at the forefront of a burgeoning field of linguistics The Universal Structure of Categories Martina Wiltschko,2014-07-24 Using data from a variety of languages this book explores a range of grammatical categories and constructions including tense aspect subjunctive case and demonstratives It presents a new theory of grammatical categories the Universal Spine Hypothesis and reinforces generative notions of Universal Grammar while accommodating insights from linguistic typology Morphological Metatheory Daniel Siddiqi,Heidi Harley,2016-06-29 The field of morphology is particularly heterogeneous Investigators differ on key points at every level of theory These divisions are not minor issues about technical implementation but rather are foundational issues that mold the underlying anatomy of any theory The field has developed very rapidly both theoretically and methodologically giving rise to many competing theories and varied hypotheses Many drastically different and often contradictory models and foundational hypotheses have been proposed Theories diverge with respect to everything from foundational architectural assumptions to the specific combinatorial mechanisms used to derive complex words Today these distinct models of word formation largely exist in parallel mostly without proponents confronting or discussing these differences in any major forum After forty years of fast paced growth in the field morphologists are in need of a moment to take a breath and survey the drastically different points of view within the

field This volume provides such a moment **Clause Structure** Elly van Gelderen,2013-07-18 Clause structure is the most widely studied phenomenon within syntactic theory This accessible book synthesizes the most important research findings examines a range of examples taken from data acquisition typology and language change and includes discussion questions helpful suggestions for further reading and a useful glossary
