Current Bibliographies in Medicine, 1988 **Cognitive Neuroscience of Consciousness**
Anil Seth, Geraint Rees, 2013-05-13
How do conscious experience subjectivity and free will arise from the brain and the body? Even in the late 20th century consciousness was considered to be beyond the reach of science. Now understanding the neural mechanisms underlying consciousness is recognized as a key objective for 21st century science. The cognitive neuroscience of consciousness is a fundamentally multidisciplinary enterprise involving powerful new combinations of functional brain imaging computational modelling theoretical innovation and basic neurobiology. Its progress will be marked by new insights not only into the complex brain mechanisms underlying consciousness but also by novel clinical approaches to a wide range of neurological and psychiatric disorders. These innovations are well represented by the contents of the present volume. A target article by Victor Lamme puts forward the contentious position that neural evidence should trump evidence from behaviour and introspection in any theory of

consciousness This article and its several commentaries advance one of the fundamental debates in consciousness science namely whether there exists non reportable phenomenal consciousness perhaps dependent on local rather than global neural processes Other articles explore the wider terrain of the new science of consciousness For example Maniscalco and colleagues use theta burst transcranial magnetic stimulation to selectively impair metacognitive awareness Massimini and coworkers examine changes in functional connectivity during anesthesia and Vanhaudenhuyse et al describe innovations in detecting residual awareness following traumatic brain injury Together then contents of this volume exemplify the grand challenge of consciousness in combining transformative questions about the human condition with a tractable programme of experimental and theoretical research Brain-Computer Interfaces ,2020-03-10 Brain Computer Interfacing Volume 168 not only gives readers a clear understanding of what BCI science is currently offering but also describes future expectations for restoring lost brain function in patients In depth technological chapters are aimed at those interested in BCI technologies and the nature of brain signals while more comprehensive summaries are provided in the more applied chapters Readers will be able to grasp BCI concepts understand what needs the technologies can meet and provide an informed opinion on BCI science Explores how many different causes of disability have similar functional consequences loss of mobility communication etc Addresses how BCI can be of use Presents a multidisciplinary review of BCI technologies and the opportunities they provide for people in need of a new kind of prosthetic Offers a comprehensive multidisciplinary review of BCI for researchers in neuroscience and traumatic brain injury that is also ideal for clinicians in neurology and neurosurgery

Changing the Paradigm of Homelessness Yvonne Vissing,Diane Nilan,Christopher Hudson,2019-11-06 Changing the Paradigm of Homelessness offers a comprehensive look at family housing distress related to the homelessness epidemic in the United States This book explores the causes and consequences of this epidemic and proposes drastic changes in America's historically ill fated approach to family homelessness By describing this crisis in detail the authors enlighten readers to the scope of this issue describe those impacted by it and outline ways to shift public policies and public perceptions The authors interweave scholarly concepts with insights of those who are currently or previously homeless and in doing so they show the importance of academic knowledge influencing policy decisions and the ways in which these influences impact the lives of real persons This book then uses pedagogy policy and pragmatism to critique the United States approach to family homelessness A Paradigm Shift to Prevent and Treat Alzheimer's Disease Howard Friel,Sally A. Frautschy,2017-07-18 A Paradigm Shift to Prevent and Treat Alzheimer's Disease From Monotargeting Pharmaceuticals to Pleiotropic Plant Polyphenols is the first book to systematically exhibit the powerful pleiotropic pharmacological effects on Alzheimer's disease of plant based compounds from ancient foods that humans have been consuming safely with substantial health benefits for thousands of years These plant based compounds include curcuminoids from turmeric resveratrol from red wine and grape seed extract from other grape products epigallocatechin gallate EGCG from green tea and oleocanthal and oleuropein from

olive oil in addition to a special extract EGb 761 from the leaves of Ginkgo biloba the oldest living species of tree on earth This book also presents a new analytical framework that convincingly favors a multi targeting pleiotropic approach to the prevention and treatment of complex chronic diseases in contrast to the mono targeting of the pharmaceutical model A Paradigm Shift to Prevent and Treat Alzheimer s Disease is a unique and exciting resource for pharmaceutical scientists pharmacologists neurologists general practitioners research scientists in various medical and life sciences healthcare professionals in clinical and executive positions conventional medical schools schools of naturopathic medicine healthcare and medical journalists executives in both national public healthcare systems and private insurers and informed general readers Presents carefully compiled evidence supporting the need to shift from pharmaceutical based mono targeting to plant polyphenol based pleiotropic targeting for the prevention and treatment of Alzheimer s disease Includes valuable tables that aggregate pleiotropic pharmacological effects of the plant polyphenols on Alzheimer s disease related pathogenic hallmarks Highlights regulatory aspects and discusses the challenges and potential solutions with respect to bioavailability of certain plant polyphenols
