

PARADIGMS

A paradigm is a set of concepts, thought patterns, or methodologies that form a particular view of understanding or interpreting the world.

OVERVIEW

Paradigms represent fundamental assumptions, concepts, and theories that guide research, inquiry, and knowledge production. They provide a lens through which we view and interpret the world, influencing the questions we ask, the methods we employ, and the conclusions we draw. Paradigms help establish beliefs, values, and principles within a discipline.

EXAMPLES

- **Functionalism (Sociology):** Views society as a complex system composed of interrelated parts that work together to maintain stability and equilibrium.
- **Constructivism (Education):** Views learning as an internal cognitive process that is stimulated by personal experiences and observations.
