Casti, 2001-05-08 John L Casti's *Paradigms Lost* framed each Big Question as a mock jury trial with prosecution defense and verdict rendered Now *Paradigms Regained* reexamines each of these questions as an appellate brief and decides whether or not the previous verdict still holds based on a decade's worth of new evidence from the scientific world's top minds In *Paradigms Regained* noted mathematician and researcher John Casti boldly tackles the Big Questions of science and sets our sights on a thrilling new millennium of discovery Exploring the extraordinary what ifs of the natural world the origins of Life the existence of extraterrestrial intelligence our genetic destiny the roots of Language and Learning the limits of knowledge he debates with penetrating insight the diverse and competing theories that exist today Brilliant accessible and totally engrossing *Paradigms Regained* offers important new insight into contemporary scientific thought *The Selfcreating Mind* Graeme Donald Snooks, 2007 In this ambitious and imaginative work noted social and biological theorist Graeme Donald Snooks explores the origin development and role of the self-conscious mind He does so by employing a realist general dynamic theory his celebrated dynamic strategy theory based on a large scale systematic observation of the broad patterns of life and human society The outcome of this exploration is the discovery of the selfcreating mind the mind that created itself through the response of countless organisms to the ever changing demands of their dynamic societies They are driven to do so by the need to survive and prosper which Snooks calls strategic desire the shaping force of all animal instincts *The Selfcreating Mind* which displaces the mind hypothesized by psychoanalytic Darwinian and complexity theorists provides a new perspective on human nature the origin nature and purpose of the self-conscious mind the reasons for its continuing breakdown in a significant minority of the population and on the surest road to mental recovery It also explores questions about the future of brain genetics artificial intelligence and the possible elimination of mental disorders Read about Graeme Snooks *The Collapse of Darwinism Or The Rise of a Realist Theory of Life* available from Lexington Books *Homo Angelicansis* Izak J. Casti, 1989 A mathematician presents the great problems of modern science with a unique twist in the form of a jury trial Casti argues for the prosecution and the defense and then renders a verdict on the Origin of Life Sociobiology Language Acquisition and more *To Explain the World* Steven Weinberg, 2015-02-17 The Nobel Prize winner shares a masterful journey through humankind's scientific coming of age from

the Greeks to modern times Brian Greene In this rich irreverent and compelling history Nobel Prize winning physicist Steven Weinberg takes us across centuries of human striving to unravel the mysteries of the world This sweeping saga ranges from ancient Miletus to medieval Baghdad and Oxford from Plato s Academy and the Museum of Alexandria to the cathedral school of Chartres and the Royal Society of London Weinberg shows that while the scientists of ancient and medieval times lack our understanding of the world they also lacked the knowledge tools and intellectual framework necessary to go about understand it Yet over the centuries through the struggle to solve such mysteries as the curious backward movement of the planets and the rise and fall of the tides the modern discipline of science eventually emerged An illuminating exploration of the way we consider and analyze the world around us To Explain the World is a sweeping ambitious account of how difficult it was to discover the goals and methods of modern science and the impact of this discovery on human knowledge and development

Accepted Science & Paradigms Which Are Likely Wrong Martin K Ettington, 2022-08-22 As an engineer and student of science I try to keep up with publications of the latest discoveries and paradigm shifts in science around the world I believe that there are several big problems with science today First is that much science is biased which might be because some scientists want to keep their point of view prominent and the others because many focuses of science are supported by biased funding This will be discussed in this book The other issue is that many scientists limit their thinking to only support age old paradigms and refuse to accept changes to their theories or throw out evidence because it doesn't conform to their current beliefs In this book we will cover many issues such as the belief among many cosmologists that the Big Bang never happened We will also look at ideas we thought settled but which have lots of contrary evidence and anecdotal counter stories such as time travel and dimensional crossings After you read this book you may question much of what is commonly accepted by scientists in the world today

Father of computer thanks to the invention of his ABC computer and then Alan Turing as the Father of modern computer thanks to his Turing Test and his views on Artificial Intelligence Both men played a momentous role in the Digital Revolution and in the Information Age according to the book Finally the author talks about nanotechnology which explores the world of small meaning at the atomic and the molecular levels and is an inescapable tool in the molecular biology revolution which itself is an important factor in scientific progress and in transhumanism or human enhancement defined as the ideology according to which man can surpass his present state by improving his genetic material

Three Paradigms of Reality Ron Dudum, 2009-09 This book is about three ways for human beings to govern their lives only two of which promote cooperation among all individuals peoples cultures and societies The earliest of the three paradigms the ancient Greek paradigm saw reason as the key to comprehending the universe Next came the early Christian paradigm which saw reason as insufficient for comprehending the universe unless it was accompanied by faith and humility Both of these paradigms ultimately unraveled through the ideas of individual freedom that culminated in the Enlightenment and our modern paradigm of self Ironically modern quantum physics and Heisenberg's uncertainty principle have shaken the modern belief in the infallibility of scientific empiricism and rationality opening the door to the possibility that knowledge of truth and reality can be acquired through empirical evidence intellectual reflection and the realm of mystery The history and implications of these paradigms are explored herein
