A History of the Ecosystem Concept in Ecology Frank B. Golley, 1993-01-01

The ecosystem concept the idea that flora and fauna interact with the environment to form an ecological complex has long been central to the public perception of ecology and to increasing awareness of environmental degradation

In this book an eminent ecologist explains the ecosystem concept tracing its evolution describing how numerous American and European researchers contributed to its evolution and discussing the explosive growth of ecosystem studies

Golley surveys the development of the ecosystem concept in the late nineteenth and early twentieth centuries and discusses the coining of the term ecosystem by the English ecologist Sir Arthur George Tansley in 1935

He then reviews how the American

ecologist Raymond Lindeman applied the concept to a small lake in Minnesota and showed how the biota and the environment of the lake interacted through the exchange of energy Golley describes how a seminal textbook on ecology written by Eugene P Odum helped to popularize the ecosystem concept and how numerous other scientists investigated its principles and published their results He relates how ecosystem studies dominated ecology in the 1960s and became a key element of the International Biological Program biome studies in the United States a program aimed at the betterment of mankind specifically through conservation human genetics and improvements in the use of natural resources how a study of watershed ecosystems in Hubbard Brook New Hampshire blazed new paths in ecosystem research by defining the limits of the system in a natural way and how current research uses the ecosystem concept Throughout Golley shows how the ecosystem concept has been shaped internationally by both developments in other disciplines and by personalities and politics

Environment and Ecology in the History of Economic Thought Vitor Eduardo Schincariol, 2024-07-05 This volume proposes a reconsideration of ecological and environmental aspects of the work and ideas of various heterodox authors and traditions in the history of economic thought including the field of economic development Many of the contributors to this book focus on thinkers and works which are not typically considered as part of the ecological sphere while others consider such economists in a new light or domain Thus the book elucidates a new and useful research field of reconsidering ecological dimensions in the traditional history of economic thought as well as helping to delineate alternative views for ongoing debates on ecological themes Did Veblen Keynes Sraffa C Furtado and other key economists and schools of thought of our age have relevant and useful insights with respect to environmental issues Which aspects of their intellectual legacies should eventually be discarded in the face of our new environmental challenges On the contrary what aspects of their economic theories can be updated and adapted to a better interpretation of our present ecological concerns How do they differ and why The essays contained in this book will help to answer these questions by means of recovering analysing and updating the work of some of the most relevant heterodox economists and schools of thought of our time This book will be of great interest for readers in the history of economic thought ecological economics environmental economics and economic development

History of Landscape Ecology in the United States Gary W. Barrett, Terry L. Barrett, Jianguo Wu, 2015-06-23 This book describes the emergence of landscape ecology its current status as a new integrative science and how distinguished scholars in the field of landscape ecology view the future regarding new challenges and career opportunities Over the past thirty years landscape ecology has utilized development in technology and methodology e g satellites GIS and systems technologists to monitor large temporal spatial scale events and phenomena These events include changes in vegetative cover and composition due to both natural disturbance and human cause changes that have academic economic political and social manifestations There is little doubt due to the temporal spatial scale of this integrative science that scholars in fields of study ranging from anthropology to urban ecology will desire to compare their fields with landscape

ecology during this intellectually and technologically fertile time History of Landscape Ecology in the United States brings to light the vital role that landscape ecologists will play in the future as the human population continues to increase and fragment the natural environment Landscape ecology is known as a synthesized intersection of disciplines but new theories concepts and principles have emerged that form the foundation of a new transdiscipline
