Recent Developments in Structured Continua Daniel De Kee, Purna N. Kaloni, 1990 *Recent Advances in Mechanics of Structured Continua* M. Massoudi, Kumbakonam Ramamani Rajagopal, 1991 **Mechanics and Thermodynamics of Continua** Hershel Markovitz, Victor J. Mizel, David R. Owen, 2012-12-06 Reprinted from Archive for Rational Mechanics and Analysis edited by C Truesdell **Physics of Dry Granular Media** H.J. Herrmann, J.-P. Hovi, S. Luding, 2013-06-29 Dry granular materials such as sand sugar and powders can be poured into a container like a liquid and can also form a pile resisting gravity like a solid which is why they can be regarded as a fourth state of matter neither solid nor liquid This book focuses on defining the physics of dry granular media in a systematic way providing a collection of articles written by recognised experts The physics of this field is new and full of challenges but many questions such as kinetic theories plasticity continuum and discrete modelling also require the strong participation of mechanical and chemical engineers soil mechanists geologists and astrophysicists The book gathers into a single volume the relevant concepts from all these disciplines enabling the reader to gain a rapid understanding of the foundations as well as the open questions of the physics of granular materials The contributors have been chosen particularly for their ability to explain new concepts making the book attractive to students or researchers contemplating a foray into the field The breadth of the treatment on the other hand makes the book a useful reference for scientists who are already experienced in the subject Third European Rheology Conference and Golden Jubilee Meeting of the British Society of Rheology D.R. Oliver, 2012-12-06 **Nonlinear Dynamics and Pattern Formation in the Natural Environment** A Doelman, A Van Harten, 2022-09-16 This Research Note aims to provide an insight into recent developments in the theory of pattern formation In the last decade there has been considerable progress in this field both from a theoretical and a practical point of view Recent mathematical developments concern the study of the nonlinear stability of systems at near critical conditions by an appropriate system of modulation equations The complexity of the original problem can be reduced drastically by this approximation Moreover it provides unifying point of view for a wide range of problems New applications of the theory arise in a multitude of scientific areas such as hydrodynamics reaction diffusion problems oceanography meteorology combustion geophysical and biological morphodynamics and semi conductors This book is intended to show the interactions between the mathematical theory of nonlinear dynamics and the study of pattern generating phenomena in the natural environment There is an intimate relationship between new insights in the mathematical aspects of nonlinear pattern formation and the comprehension of such phenomena Therefore there are two partly overlapping main themes one in which the emphasis is on generally applicable mathematical theories and techniques and one in which the phenomenology of pattern evolution in various areas is discussed The book comprises 19 contributions by experts in the field Although the emphasis changes considerably from paper to paper in each contribution the same two themes are present all the authors have aimed to achieve a suitable balance between the
