Images Manfredo Massironi, Translated by N Bruno, 2001-08-01 This book explores the nature of one of the most ancient tools for nonverbal communication drawings They are naturally adaptable enough to meet an incredibly wide range of communication needs But how exactly do they do their job so well Avoiding the kinds of aesthetic rankings of different graphic domains so often made by art historians and critics Manfredo Massironi considers an extensive and representative sample of graphic applications with an open mind He finds a deep mutuality between the material components of images and the activation of the perceptual and cognitive processes that create and decipher them Massironi first examines the material components themselves the mark or line the plane of representation the angle formed by the actual drawing surface and the depicted objects and the position of the viewpoint relative to the depicted objects The roles played by these three components are independent of the content of the drawing they function in the same way in concrete and abstract representations He then closely scrutinizes the choices made by the person planning and executing the drawings Given that any object can be depicted in an infinite number of different ways the drawer performs continuous work emphasizing and excluding different features The choices are typically unconscious and guided by his or her communicative goals A successful graph be it simple or complex is always successful precisely because the emphasized features are far fewer in number than the excluded ones Finally he analyzes the perceptual and cognitive integrations made by the viewer Drawings are not simply tools for communication but important instruments for investigating reality and its structure Richly illustrated the book includes a series of graphic exercises that enable readers to get a sense of their own perceptual and cognitive activity when inspecting images Massironi's pathbreaking taxonomy of graphic productions will illuminate all the processes involved in producing and understanding graphic images for a wide audience in fields ranging from perceptual and cognitive psychology through human factors and graphic design to architecture and art history *Strategy Builder* Stephen Cummings, Duncan Angwin, 2015-02-13 A visual and interactive guide to building and communicating strategies that actually work YOUR STRATEGY HAS SEVEN SECONDS TO CAPTIVATE ITS AUDIENCE So how are you going to present it A big wordy document A lengthy address Slides full of bullet points The best way to engage and involve people is through pictures Strategy Builder shows you how to creatively combine the best strategy frameworks to orient and animate strategy discussion and development in your team This visual interactive guide with illustrations by Visory uses real world examples and practical tips to help you Discover the five key foundations that every strategy should be built upon Draw compelling and unique pictures that capture your organization's distinct strategies Develop your skills as a leader of strategy discussions

Phillips, Stephen P. Norris, John S. Macnab, 2010-09-02 Science education at school level worldwide faces three perennial problems that have become more pressing of late These are to a considerable extent interwoven with concerns about the entire school curriculum and its reception by students The rst problem is the increasing intellectual isolation of science from the other subjects in the school curriculum Science is too often still taught didactically as a collection of pre determined truths about which there can be no dispute As a consequence many students do not feel any ownership of these ideas Most other school subjects do somewhat better in these regards For example in language classes students suggest different interpretations of a text and then debate the relative merits of the cases being put forward Moreover ideas that are of use in science are presented to students elsewhere and then re taught often using different terminology in science For example algebra is taught in terms of $x y z$ in mathematics classes but students are later unable to see the relevance of that to the meaning of the universal gas laws in physics where $p v t$ are used The result is that students are confused and too often alienated leading to their failure to achieve that extraction of an education from a scheme of instruction which Jerome Bruner thought so highly desirable **The Oxford Handbook of Perceptual Organization** Johan Wagemans, 2015 Perceptual organization comprises a wide range of processes such as perceptual grouping figure ground organization filling in completion and perceptual switching The Oxford Handbook of Perceptual Organization provides a broad and extensive review of the current literature written in an accessible form for scholars and students **Eleven Exercises in the Art of Architectural Drawing** Marco Frascari, 2011-03-08 This book deals with the critical nature and crucial role of architectural drawings A manual which is essentially not a manual it is an elucidation of an elegant manner for practising architecture Organized around eleven exercises the book does not emphasize speed nor incorporate many timesaving tricks typical of drawing books but rather proposes a slow meditative process for construing drawings and for drawing constructing thoughts This is an indispensable reference text and an effective textbook for students seeking to advance their appreciation of the nature and exercise of architectural drawings Images of Class Jacopo Galimberti, 2022-09-06 The first overview of the unique encounter between artists and the prominent Marxist current Workerism also known as Operaismo During the 1960s and 1970s Workerism and Autonomia were prominent Marxist currents However it is rarely acknowledged that these movements inspired many visual artists such as the members of Archizoom Gordon Matta Clark and Gianfranco Baruchello This book focuses on the aesthetic and cultural discourse developed by three generations of militants including Mario Tronti

Antonio Negri Bifo and Silvia Federici and how it was appropriated by artists architects graphic designers and architectural historians such as Manfredo Tafuri Images of Classsignposts key moments of this dialogue ranging from the drawings published on classe operaia to Potere Operaio s exhibition in Paris the Metropolitan Indians zines a feminist art collective who adhered to the Wages for Housework Campaign and the N group s experiments with Gestalt theory Featuring more than 140 images of artworks many published here for the first time this volume provides an original perspective on post war Italian culture and new insights into some of the most influential Marxist movements of the twentieth and twenty first centuries worldwide

Art and Illusionists Nicholas Wade,2015-10-12 We delight in using our eyes particularly when puzzling over pictures Art and illusionists is a celebration of pictures and the multiple modes of manipulating them to produce illusory worlds on flat surfaces This has proved fascinating to humankind since the dawning of depiction Art and illusionists is also a celebration of the ways we see pictures and of our ability to distil meaning from arrays of contours and colours Pictures are not only a source of fascination for artists who produce them but also for scientists who analyse the perceptual effects they induce Illusions provide the glue to cement the art and science of vision Painters plumb the art of observation itself whereas scientists peer into the processes of perception Both visual artists and scientists have produced patterns that perplex our perceptions and present us with puzzles that we are pleased to peruse Art and illusionists presents these two poles of pictorial representation as well as presenting novel perceptual portraits of the artists and scientists who have augmented the art of illusion The reader can experience the paradoxes of pictures as well as producing their own by using the stereoscopic glasses enclosed and the transparent overlay for making dynamic moir patterns
