Newsletter, 1992 The Next Generation Space Telescope H. S. Peter Stockman, 1998 **U.S. Astronomy and Astrophysics** National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Space Studies Board, Committee on the Organization and Management of Research in Astronomy and Astrophysics, 2001-11-20 In its fiscal year 2002 budget summary document the Bush administration expressed concern based in part on the findings and conclusions of two National Research Council studies about recent trends in the federal funding of astronomy and astrophysics research The President's budget blueprint suggested that now is the time to address these concerns and directed the National Science Foundation NSF and the National Aeronautics and Space Administration NASA to establish a blue ribbon panel to 1 assess the organizational effectiveness of the federal research enterprise in astronomy and astrophysics 2 consider the pros and cons of transferring NSF's astronomy responsibilities to NASA and 3 suggest alternative options for addressing issues in the management and organization of astronomical and astrophysical research NASA and NSF asked the National Research Council to carry out the rapid assessment requested by the President This report focusing on the roles of NSF and NASA provides the results of that assessment **Scientific Drivers for ESO Future VLT/VLTI Instrumentation** J. Bergeron, G. Monnet, 2013-12-21 This is the start of a long process to ultimately operate new advanced capabilities at Paranal that can keep up with the evergrowing need for larger and more complex astrophysical data sets A modern instrument represents a very significant investment in cash human resources and time Such a meeting gives us a precious yardstick to evaluate the competitiveness of 1st generation instruments and associated current and forthcoming proposals for 1st generation upgrades This is also crucial to orient the large research and development effort that will provide the very foundation on which 2nd generation VLT instrumentation can be built Finally it represents a significant step towards defining the hopes and goals for the future Extremely Large Telescope to come The first outcome of this meeting already in progress is outlined in the epilogue Encyclopedia of Astronomy & Astrophysics P Murdin, 2001-01-01 In a unique collaboration Nature Publishing Group and Institute of Physics Publishing have published the most extensive and comprehensive reference work in astronomy and astrophysics This unique resource covers the entire field of astronomy and astrophysics and this online version includes the full text of over 2 750 articles plus sophisticated search and retrieval functionality and links to the primary literature The Encyclopaedia's authority is assured by editorial and advisory boards drawn from the world's foremost astronomers and astrophysicists This first class resource is an essential source of information for undergraduates graduate students researchers and seasoned professionals as well as for committed amateurs librarians and lay people wishing to consult the definitive astronomy and astrophysics reference work *Galaxy Interactions at Low and High Redshift* J.E. Barnes, D.B. Sanders, 2012-12-06 The 186th IAU Symposium came at an exciting and perhaps even historic time for extragalactic astronomy New spacecraft observations plumbed the depths of the Universe

out to redshifts of five while revealing astounding details of nearby galaxies and AGN at intermediate redshifts Theoretical ideas on structure formation together with results from detailed numerical modeling created a comprehensive framework for modeling the formation of galaxies and the transformation of galaxies by interactions and mergers All these strands came together at the Symposium as participants glimpsed a developing synthesis highlighting galactic encounters and their role in the history of the Universe This volume offers professional astronomers including PhD students an overview of the rapidly advancing subject of galaxy interactions at low and high redshifts

The Design and Construction of Large Optical Telescopes Pierre Bely, 2006-05-26 There is no dearth of books on telescope optics and indeed optics is clearly a key element in the design and construction of telescopes But it is by no means the only important element As telescopes become larger and more costly other aspects such as structures pointing wavefront control enclosures and project management become just as critical Although most of the technical knowledge required for all these fields is available in various specialized books journal articles and technical reports they are not necessarily written with application to telescopes in mind This book is an attempt at assembling in a single text the basic astronomical and engineering principles used in the design and construction of large telescopes It aims to broadly cover all major aspects of the field from the fundamentals of astronomical observation to optics control systems structural mechanical and thermal engineering as well as specialized topics such as site selection and program management This subject is so vast that an in depth treatment is obviously impractical Our intent is therefore only to provide a comprehensive introduction to the essential aspects of telescope design and construction This book will not replace specialized scientific and technical texts But we hope that it will be useful for astronomers managers and systems engineers who seek a basic understanding of the underlying principles of telescope making and for specialists who wish to acquaint themselves with the fundamental requirements and approaches of their colleagues in other disciplines
